As to the arming of American ships, I don't see any two sides to that question. The Nazis are attacking shipping in the waters around Greenland and Iceland. We must run American ships to those points—that is, unless we are prepared to evacuate both places and leave it to the Nazis to occupy them if they wish, and thus plant themselves within striking distance of the North American continent. As we are not going to surrender those bases of potential attack against this hemisphere, the necessity of protecting the supply line to them is obvious. Arming of ships is a necessary part of that defense.

As to repealing other restrictions in the Neutrality Act so that American ships can go into belligerent ports, further discussion is in order. In the present situation such a step probably would mean active naval war on a full-out scale.

It would mean running American ships, carrying lend-lease supplies directly into British ports. It seems to me there is a clear distinction between this and the protection of American ships operating to our own bases in Greenland and Iceland. In the latter case we have set up a reasonable line of defense outposts, and the necessity of protecting them is part of the operation. Nazis operating in those waters are manifestly out looking for trouble, and if shooting results it is shooting of their own seeking, and it is not for us to run away from it.

But in carrying goods directly into Britain, we would be going into a war zone, and we would be legitimate targets of attack. There may be a lot of authority in the international lawbooks for a neutral country carrying on trade with belligerents, but that authority is academic. The fact is that Germany and England are at war, and that to carry goods into England is to lay ourselves open to Nazi attack, just as we would be open to attack from the British if we tried to carry goods through the British blockade to Hamburg.

It is true that the Neutrality Act is being evaded and that it has been in part repealed by the lend-lease action. But the restriction against American ships and crews going into belligerent ports is still operative in the Atlantic and to repeal the restriction would be to make a definite and a fundamental change in our relation to the war.

I do not want to see that step taken if it can be avoided. If that step meant the difference between Hitler winning and Hitler losing, I would be in favor of it. I am not sure that is the case. Not yet. From everything I hear in England, the North Atlantic situation improved vastly during July and August. The time may very well come when the volume of American supplies and the volume of new American shipping would make it desirable to do part of the carrying ourselves, and even necessary unless we were willing to transfer most of our new merchant fleet to foreign registry. I doubt if that time has arrived. If it has, then the information to demonstrate it should be made available.

In other words, I do not want to see us any further into the war than we have to be in it to save a free world from destruction. That we have an interest in such an outcome seems to me beyond argument, and we are preparing to contribute heavily to it in materials. If that assistance is sufficient, then a sacrifice of American lives in addition would be needless. I think we are entitled to more conclusive evidence before we are asked to send American ships straight through into belligerent ports.

Wait and See

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

ADDRESS BY DR. NICHOLAS MURRAY BUTLER

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Dr. Nicholas Murray Butler, president of Columbia University, at the opening of the one hundred and eighty-eighth year of Columbia University, September 24, 1941, entitled "Wait and See":

The highest type of ability in all which concerns the cooperation of men is what we call the administrative. Administration is the art of planning with foresight and of getting done with promptness, with effectiveness and at least possible cost of labor and of resources, all that represents and reflects the interests and ambitions of men in any given field of endeavor. History makes it very plain that from the earliest times there has been marked administrative ability in certain fields of human interest. Among these are the military, the ecclesiastical, and the exploratory. Since the end of the eighteenth century, oportunities for the exercise of administrative ability have multiplied a thousandfold as a result of the industrial and economic evolution which has marked that period. In all that relates to production, to transportation, to commerce, and to finance, administrative ability has found new opportunity in every part of the world and to an extent which would have seemed quite impossible a century and a half ago.

The most important field of human interest and cooperation in which administrative ability seems to lag is the governmental policies of the modern democracies. This was not always the case, as is made plain by a reading of the history of Great Britain in the seventeenth and eighteenth centuries, of France in the eighteenth century, and of our own people when the foundations of our Federal Government were being laid and our political structure was being built upon those foundations. As the democratic process has developed and broadened, however, and as the number of individual citizens participating in the choice of political representatives and in the shaping of public policies has grown, differences of opinion and of personal and group interest have come to play a steadily increasing part in the story of governmental action. Theoretically, in each one of these modern democracies, a majority rules. Theoretically, when a vote is taken on a very difficult and disputed matter and a clear majority is recorded in favor of one definite way of dealing with it, the chosen representatives of the people should at once and promptly act in accordance with what must be regarded as their instructions. But if the minority be cleverly led and armed with strong and persuasive arguments or supported by powerful emotion, there may be and there usually is indefinite delay in the formal action of public authority in respect to the matter under consideration. If, as so often happens when a general election of legislative representatives is held in a democracy, there are half a dozen questions at issue and not merely one question, then the problem presented to the legislative body grows in difficulty and in complexity. Under such circumstances, a first effort is usually to try to find a working hypothesis by which in one way or another all of the leading elements in the constituencies may be either satisfied or at least mollified. This of course does not make for efficiency or for good government. It makes simply for getting along in what appears to be the best way possible. It leaves unsettled and unsolved numerous very important political problems, some of them quite fundamental. Just now there are several such problems in our American political life,[1] but there is no sign that the Government proposes to take any action about them, simply because there are at the moment no organized pressure groups armed with political threats endeavoring to get action by the Federal Government in regard to any one of them.

In such cases the answer of the legislators is, "Wait and see." That has become a most popular slogan in all the democracies. It has furnished and is furnishing material for sarcasm and for sneering at democracy by the present-day despots and their blind followers. These despots feel that they at least can get something done, whether that something be military or civil, moral or immoral, just or unjust, humane or cruel. They therefore claim for themselves and their doctrines a degree of efficiency in administration which they insist the democracies cannot imitate and will not endeavor to imitate.

It must never be forgotten that in a democracy the beginnings of all good government are to be found in local self-government. It is in the community, be it village or town, city or county, whose inhabitants are immediately interdependent and closely in touch with each other, that a high degree of efficiency in public administration usually exists. For example, in the United States it is almost certain that the local police, the local fire department, and the local tax-supported schools are effectively administered. When from these local political units one moves to the Government of a State or to that of the Federal Union conditions sharply change. We then begin to find extravagance, duplication of organization and of effort, lack of effective oversight, and in many ways lack of efficiency. An outstanding exception is the United States Postal Service, where there is a very high type of administrative efficiency. That service has the advantage of being very little and very infrequently interfered with by new forms of congressional action and control. It therefore can proceed on the basis of its own experience to serve the public with very high effectiveness in the field of communication, than which none is more important.

It is obvious that the policy of wait and see will not do if democracy is to hold its own. Wait and see not only diminishes efficiency of governmental service, but it puts democracy itself in very great danger. In a world where every sort and kind of self-seeking is at work in order to control increasing numbers of human beings and widening areas of the earth's surface, a policy of wait and see spells defeat. It should now be pretty plain that either this modern world is going to remain at war until the whole of what we call civilization has been destroyed and all its great monuments wrecked, or that the forces of constructive, liberal democracy will shortly be able to take leadership of the world and in reasonable time to put it upon a permanent foundation of order, of justice, of peace, and of prosperity. This certainly cannot be done, however, by the policy of wait and see. If we are only to wait and see, then the believers in liberal democracy are openly handing control of the future to their bitter and determined enemies.

By great good fortune, mankind has just now been offered definite and specific leadership in its search for the foundations upon which to build a new and orderly world of prosperity and of peace. This is given by the Atlantic declaration, announced to the world on August 14 last by the President of the United States of America and by the Prime Minister in the Government of Great Britain. To the American people, this Atlantic declaration comes like a new Declaration of Independence in the field of national policy and international relations. It is supported with sympathy and understanding by those hopes and policies which have been close to the heart of the American people since the days of Washington and Franklin, of Hamilton and Jefferson. It echoes the famous sentence of President McKinley spoken 40 years ago, "The period of exclusiveness is past." It is in harmony with the doctrines taught by Presidents Theodore Roosevelt, Taft, Wilson, and Harding, as well as with statements contained in the declarations of principle that were adopted by the Democrat National Convention and by the Republican National Convention of 1920. It is in accord with the instructions to the American delegates to the Hague Conference of 1907, given by Elihu Root, then Secretary of State. It is in ac-

[1] See Nicholas Murray Butler, Across the Busy Years (New York: Charles Scribner's Sons, 1939-40) II, 344-374.

cord with the joint resolution approved June 25, 1910, adopted without a dissenting vote by both Houses of the American Congress, calling for the limitation of armaments and for constituting the combined navies of the world an international police force for the preservation of universal peace.

This Atlantic declaration, which in so complete and so splendid a fashion emphasizes and repeats this long series of statements of national policy, is the direct and conclusive answer to those who would continue to put their country in danger by preferring a policy of wait and see. This is no time to wait and see. The danger is too immediate and too great. It is time to think and to act.

A Congressman Looks at Congress

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

ARTICLE BY HON. KARL E. MUNDT, OF SOUTH DAKOTA

Mr. MUNDT. Mr. Speaker, a short time ago I was asked to write a magazine article under the title "A Congressman Looks at Congress," by an editor who said he believed that the people of America were growing more and more interested in the personalities and procedures of Congress. This article was printed in the September issue of the Republican, a monthly magazine published in Chicago.

In today's struggle to preserve and perfect the true functioning of self-government, I think it is important that as many citizens as possible interest themselves in the formula of freedom by which congressional and constitutional government operates in this Republic. It is with the humble hope that this article may help add to America's collective information on this subject that I take this opportunity of reprinting it in the CONGRESSIONAL RECORD.

[From the Republican for September 1941]

A CONGRESSMAN LOOKS AT CONGRESS—WANT TO KNOW WHAT A CONGRESSMAN THINKS ABOUT HIS JOB AND HIS ASSOCIATES? HERE ARE THE FACTS PRESENTED DELIGHTFULLY AND READABLY

(By KARL E. MUNDT, Member of Congress, First District, South Dakota)

It used to be popular in this country, and maybe it still is, for clothiers and haberdashers to usher in the change of seasons with the slogan, "Look at your hat—everybody else does." That slogan might be paraphrased a bit to relate to the title of this article. "A Congressman Looks at Congress," by adding, "Why shouldn't he?—Everybody else does." At least everybody else should, because, if the full functioning of self-government is to survive in this country, its continuance will result from the ability of Congress to maintain itself as a fully coordinate and independent branch of the Federal Government.

The term "Congress," of course, refers to both the Senate and the House of Representatives, but of recent years it has come to be used with increasing frequency to denote the House of Representatives or the Lower House. Thus a Senator is never called a "Congressman," although he actually is one, and a Congressman is never called a Senator, although he frequently wishes that he were one.

We Congressmen, however, seldom share the awe and reverence for the Senate which Senators sometimes like to assume attaches to the so-called Upper House. We grant that "the other body," as our parliamentary rule book insists that we refer to the Senate on the floor of the House, is, of course, the Upper House, but we secretly cherish the belief that it got this name because of its persistent record in recent years of "upping" practically every appropriation bill which passed the Lower House—the Congress—the House of Representatives. In fact, any self-respecting Congressman feels that he is just as important as a Senator—except that the Senator lasts 4 years longer than a Member of the House.

HOUSE IS ULTRAEXCLUSIVE

In fact, if you press him hard enough, a Member of the House will deny vociferously that the Senate is "the most exclusive club in the world" and will insist with vigor and verve that, when it comes to downright exclusiveness the House makes the Senate look like a county fair picnic by comparison. And if he is a good Congresman, he can prove his point, too, with an argument running something like this: "It is the House of Representatives rather than the United States Senate that merits the title of 'the most exclusive club in the world.' Why, anybody can become a United States Senator who has reached the legal age and who happens to be a personal friend of the Governor of any State in which a Senate vacancy develops. It's as easy as getting appointed to the game and fish commission—only not as frequent.

"But every Member of the House of Representatives has to get there on his own power and can be sworn into office as a Congressman only after he has been elected by the people of his own district in an official election. Thus the House is the only branch of government which never has a Member who was not selected by the people themselves. Talk about exclusive. Why, the country might have even a President who was appointed Secretary of State by a predecessor, who failed to serve out his term and whose Vice President also failed to survive the 4 years; but it can never have a Congressman except by the exclusive American function of being elected by the real rulers of America—the citizens themselves." There is the Congressman's argument for the ultraexclusiveness of the House of Representatives where, if it is not true that only the fit survive, it is certainly true that only the survivors (of an election) are fit to serve.

But looking at Congress through the eyes of a Congressman (and I mean the eyes of a Republican Congressman as I could not see with any others), I observe much of vastly more importance than the age-old contest about which House of Congress outranks the other in importance—or, as some would have it, in impotence.

ABOVE-AVERAGE CROSS SECTION

My first impression, upon becoming a Member of Congress some 3 years ago, was that, like the old Ford automobile, Congress had survived its meanest critics and had far outdistanced its friendliest commentators. Members of Congress—yes, both Houses of it—are usually far more able, sincere, and unselfish in their service to the country than, as an outsider looking in, I had supposed they would be. Ranging in age from slightly over 25 to something over 80, and including representatives of most of the established businesses and professions in the country, the United States House of Representatives is a cross section of America, but it is a layer selected from above the medium. Since it cannot include all of the lawyers in the country, for example, it has some of the best. Likewise, its membership includes some of the best businessmen, some of the best preachers, best farmers, best editors, and so on down the line.

Looking down on Congress from the vantage point of a seat in the gallery of the House Chamber—or even from the press gallery—Members of Congress do not show up to advantage. Its 435 Members have no common denominator of appearance, of dress, of stature, or of behavior. Some are as undignified as boys at a circus; some are as austere as a mortician's crew of helpers. Some are gay, and some are garrulous. But each one earned his right to membership in his own district on his own merit, and a 6 weeks' study of the votes and actions of any Member reveals pretty well the type of district which he represents and the kind of people who inhabit his district. No Member of Congress ever gets very far away from his people for very long at a time and stays in Congress. The brevity of his 2-year term and the prevailing good judgment of the voters of America see to that.

THERE'S A REASON

The first week I was in Congress an old-timer sat down beside me one day and commented dryly, "I suppose when you hear some of these guys doing a little demagoguery down in the well of the House you wonder how in hell they ever got here in the first place. I used to feel that way about it, too, but if you stay around here for a few months, son, you'll soon discover that there's a pretty good reason why every one of these Members defeated anywhere from one to half a dozen rivals to win his seat in Congress." I have often thought of that old-timer's observations, and I'm sure today that he was eternally correct in his conclusions.

Membership in Congress is a good deal like membership in a large club. Members may argue with each other vigorously and with great heat for half a day on the floor of the House, but they do not bruise easily and they heal quickly. Bitterest of opponents on partisan or sectional or economic questions may fight it out to the last vote on the floor of the House, but after the count is taken the play is over; and, as Scarlett O'Hara put it, "Tomorrow's another day." and on "another day" a new question will be before the House, and opponents of yesterday may join as proponents in this new legislative battle, or vice versa. And against the outside world, against an unfair newspaper columnist or radio commentator, against some force or person who would intrude upon the sanctity of the House or assail its functions, the entire membership will join to defend one of its Members or its collective honor. The comraderie among Members of Congress crosses all party and sectional lines and survives the bitterest of congressional debates.

TWO FAMOUS BACHELORS

The two outstanding men in the House, as presently constituted, invariably demonstrate this "fight and forget" dualism. SAM RAYBURN, able and amiable Speaker of the House, is a Texas bachelor who marshals his Democratic (and New Deal) forces with great skill and success to withstand the attacks and criticisms, the objections, amendments, modifications, and proposals of JOE MARTIN'S group of embattled minority Members. SAM RAYBURN is both fair and fervent. He fights hard and long for the administration's point of view. The minority leader (adjudged last year by Capitol Hill correspondents as "the most valuable Member of Congress"), is a Massachusetts bachelor (these "singletons" go places in Congress) whose parliamentary skill, political sense, and all-around ability mark him easily as a leader of far better than average ability.

JOE MARTIN leads his minority as vigorously and valiantly as SAM RAYBURN leads his greater army; neither leader asks for quarter nor offers concessions to appease. Neither will sacrifice principle for politics nor honor for victory. Both retain the loyalty of their

respective parties and followers by "playing ball with the members of their own team." But after the balloting is over and the decision is made, it's "another day" for both SAM and JOE. And between the two of them exists a prevailing friendship and a deep sense of mutual respect which the roughest and longest of parliamentary battles will not tarnish.

For the fact that the House Republicans, during the past two sessions of Congress, so frequently have defeated unwise legislation, modified excessive legislation or postponed unnecessary legislation, JOE MARTIN deserves additional credit because of the dual facts that: (1), His Republican forces face an opposition majority of about an even hundred; and (2), the Republican Party meetings are never in the form of a caucus which binds the members to support a party policy, but are simply conferences to inform the members about the merit or demerit of impending legislation from the Republican viewpoint. Once the party conference is over, every Republican can follow the inclination of his own nose without falling into disrepute with his fellows and, unless he is convinced that the approach of the majority of his party is best for the Nation, he can rebel without becoming a rebel. In spite of such consideration for the rights of the individual Republican in Congress, "Joe's gang" have worked together to leave the imprint of the Republican point of view upon a surprisingly large amount of legislation since he became the minority leader in 1939.

DECLARATION OF G. O. P. POLICY

Illustrative of the technique behind the scenes in Republican congressional conferences was the recent party meeting to discuss the problems of national defense and foreign affairs. A set of resolutions was presented by a group of Republican Members, most closely associated with legislation in these fields, and after free and open discussion, the following statement was adopted by a near-unanimous vote of the party conferees as a declaration of Republican policy:

"The Republican Members of the House of Representatives, believing that the people of the United States are entitled to a definite expression of our views on national defense and foreign policy, hereby declare:

"(1) We reaffirm the pledge of our 1940 party platform: 'The Republican Party is firmly opposed to involving this Nation in foreign war. We approve the restatement of this principle, subsequently written into the 1940 Democratic Party platform: 'We will not participate in foreign wars, and we will not send our Army, Navy, or Air Forces to fight in foreign lands outside of the Americas, except in case of attack.' We demand the fulfillment of these pledges.

"(2) We reaffirm the declaration in our party platform: 'We condemn all executive acts and proceedings which might lead to war without the authorization of the Congress of the United States.'

"(3) We reaffirm the declaration of our party platform, as follows: 'Our national defense must be so strong that no unfriendly power shall ever set foot on American soil. To assure this strength, our national economy, the true basis of America's defense, must be free of unwarranted governmental interference.' We firmly believe in maintaining and upholding the Monroe Doctrine and safeguarding this hemisphere from foreign invasion. We insist that our national defense be strong enough to accomplish these objectives.

"(4) The 'lease-lend' policy was presented to the American people as a measure 'short of war.' We insist that it be administered as a 'short-of-war' measure.

"(5) We are convinced that this declaration of policy is overwhelmingly supported by American public opinion and that such a program will assure the greatest degree of national unity and security."

JOE HAS TACT, PERSISTENCE

To bring about a meeting of many minds from various sections of the country on the most important problems of our day, a congressional leader must be both tactful and persistent. JOE MARTIN has these qualities in rich abundance. Since the adoption of this "directional beam" of party policy in Congress, a new back-drop has been provided before which to study the parade of passing events with the collective power of party unity. No Member is bound by such a declaration of policy, but all Members are benefited by having such a reaffirmation of party policy before them as they approach the problems which come to hand. It is a demonstration of collective strength without the sacrifice of individual power.

The American Congress exemplifies one of the signal axioms of self-government in this Republic; namely, that for its successful functioning it depends upon the two-party system. A membership of 435 individual Congressmen would be too unwieldly to produce results of merit were it not for its division along two-party lines. The majority proposes major legislation; the minority analyzes it for defects, criticizes its weaknesses, suggests improvements. Each party has a definite responsibility in the American Congress just as it does in the bigger arena of all political activity in this Republic. When either the directing party or the disagreeing party fails to function in Congress, Congress fails to represent the people and begins to represent the Executive or the party in power.

Thus as "A Congressman Looks at Congress," it takes on the aspect of a great proving ground for all that is best in the science of self-government. It is the last great forum in the world in which the two-party system of government serves to protect the weak from the strong, the minority from the majority, and the permanently important from the ephemerally expedient. Come to think of it, however, there is another reason why Congress is so important to the survival of freedom in America.

It's because much more frequently than he "looks at Congress," a Congressman looks at the country. He looks out to his constituents who comprise in the aggregate all the citizens of this Republic. He looks out to them for "directional beams" to guide his acts and votes more often than he looks to congressional conferences or party parleys for such support. Yes; it is probably because "Congress looks to the country" to determine how it can serve America best that so much of the country looks to Congress with the hope and the confident prayer that, come what will, the United States of America long will continue to believe and to behave in accordance with the great American principle that "under God the people rule."

Senator Wagner Points Out Vital Necessity of Planning Now for Post-War Jobs

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

ARTICLE BY HON. ROBERT F. WAGNER, OF NEW YORK

Mr. VOORHIS of California. Mr. Speaker, no one is better equipped to discuss the question of meeting the problems which will confront us when we stop spending these billions on defense than is the senior Senator from New York, Hon. ROBERT F. WAGNER. I take pleasure in including with my remarks an article by the Senator which appeared in the America Laborite, official organ of the American Labor Party of New York.

[From the American Laborite of August 15, 1941]

PLAN FOR MILLIONS OF POST-WAR JOBS VITAL TO CUSHION END OF ARMS BOOM

(By ROBERT F. WAGNER, senior United States Senator from New York)

In the judgment of history, the Versailles Treaty is recognized as a bad peace because it was primarily a political settlement. It carved out new states, shifted old boundaries, transferred colonies, exacted reparations, and created a League of Nations with ineffective guaranties against military aggression and infringement of minority political rights. There was little if any regard for a lasting economic basis on which the political arrangement would have to stand or fall.

When peace came, the United States, like the rest of the world, went back to economic normalcy. A thoughtful program of post-war economic reconstruction, offered by American organized labor, did not win a favorable hearing. Our wartime agencies were promptly dismantled, and no agencies or even plans for adjustment to immediate or long-range peacetime economic and social needs were established in their place.

Looking back over the last two decades, we can see clearly how the failure to advance toward a just economic order inevitably led to world-wide depression, and unleashed the brute forces of intolerance that threaten our security today.

In the present conflict, President Roosevelt has proclaimed America's refusal not only to accept a Hitler-dominated world, but also to accept a world like the post-war world of the 1920's, "in which the seeds of Hitlerism can again be planted and allowed to grow." To that end, the President has stated, and responsible British statesmen of all parties have affirmed, that democracy's guiding peace aim must be social security in its broadest sense, within and between nations.

This time, before our free world crashes about us in utter and final ruin, the forces of democracy are determined to win the war, and, equally important, to win the peace as well.

British labor, speaking through the Labor Party, has taken the lead in formulating these aims, and the work of planning for post-war problems in Britain is being directed by a labor member (Arthur Greenwood, minister without portfolio) of Mr. Churchill's cabinet. British conservatives vie with laborites in recognizing that only through intelligent planning can democracy avoid the reproach of slums and poverty, of idle resources and chronic unemployment; that only through the practical cooperation of peoples in the necessary task of reconstruction can the peace be finally won.

In order to focus American attention on this far-reaching problem I introduced at the very beginning of this Congress a resolution to establish the Post Emergency Economic Advisory Commission, composed of 12 members—3 Members of the House of Representatives, 3 Members of the Senate, and 6 others chosen by the President from the executive departments and the general public. The Commission would be authorized to study the economic problems likely to confront the Nation upon the termination of the present defense emergency, and to formulate a comprehensive program for the full utilization of America's resources of men and machines in maintaining and improving

the economic well-being of all the people. The Commission would have authority to call on the various agencies and departments of government for materials, information, and personnel. From time to time the Commission would publish progress reports and recommend appropriate legislation.

If Hitler conquers the Old World, America's economic problem will be grave—armaments and more armaments will be the order of the day. If the war ends with Hitler's complete downfall, the way to a brighter future will be opened, but it must be won by a national effort even more complex than the organization of production for the military victory. Abroad, economic chaos will prevail in our normal world markets. At home, we will be faced with the twin evils of an expanded but largely unused industrial capacity and many millions of unemployed. The unemployment problem will be aggravated by substitute products and more efficient machinery developed under stress of defense production, and by vast migrations of workers from defense areas back to the farms and to peacetime industrial centers.

Temporary measures to cushion the shock will of course be necessary. An expanded relief program will be imperative. In addition, under a bill I have introduced, substantial funds would be appropriated now for the selection and planning of a "shelf" of public-works projects, ready for immediate use when the defense program is concluded. But these and other measures are only stopgaps; they cannot begin to meet the postdefense unemployment problem. In the last year, $45,000,000,000 have been made available for defense orders in American industry—and we still have millions of jobless. Relief spending on such a scale after the war is out of the question, for tax revenue will be declining at the same time we are seeking to retrench in Government spending.

The solution must be sought and found in the intelligent cooperation of labor, industry, and government under our system of free enterprise to keep our men and resources at work producing for the peacetime needs of the American people and of a reconstructed world. Can this be done? The answer is—it must be done, or else our free way of life will not survive. The Treasury could not withstand the drain on public funds, and our social system could not withstand the continued waste of unemployed men and machines. We have the resources, the factories, and the willing hands. In producing for defense, virtual miracles have been wrought, and armament schedules surpassed. With the same urgency and sacrifice, we can win the battle of production for peace.

We must be concerned with measures to be adopted now, in addition to those prepared and held in reserve when the emergency ends; for example, maintain sound defense tax and price policies, to avoid a cycle of inflation now and deflation later on; create a system of dismissal compensation for defense workers, financed out of present defense pay rolls and earnings; extend and improve our machinery for unemployment insurance and job exchanges; and provide that public housing built now for defense workers shall be available for slum dwellers after the emergency has passed. For a really effective industrial mobilization plan for peace, the time to begin work is now.

In centuries past, good cropland was scarce and the supply of material goods extremely limited. Wars were fought for control of these means of production. The modern world is blessed with machines fashioned by man and subject to man's control, machines that can produce for a better, happier standard of life than we have ever known. To begin thinking and planning now for that goal is really part of our defense effort. It is the very heart of the dynamic, democratic philosophy which is the only hope of a troubled world.

Niagara Falls Power Development and the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

LETTER TO THE FEDERAL POWER COMMISSION AND ARTICLE FROM THE BUFFALO COURIER-EXPRESS

Mr. BEITER. Mr. Speaker, under leave to extend my remarks I call the attention of the House to a recent statement of Chairman Leland Olds of the Federal Power Commission that immediate construction of the St. Lawrence project is needed to furnish additional power to up-State New York and my reply to Mr. Olds, citing the fact that further development of Niagara Falls and utilization of present facilities would supply the needed power. I have suggested to Chairman Olds that the Niagara Falls development project should have priority over the St. Lawrence seaway. My letter to the Commission and a release from the Buffalo Courier-Express of September 28, 1941, are included herein:

SEPTEMBER 27, 1941.

Hon. LELAND OLDS,
Chairman, Federal Power Commission,
Washington, D. C.

MY DEAR CHAIRMAN: Reference is made to your letter of September 19 in which you enclosed, at my request, a list of industrial plants served by the Niagara Falls Power Co., which you indicated at recent hearings on the St. Lawrence seaway would expand production if additional power is available.

Undoubtedly, you have received some indication from the companies mentioned that they could use more power for defense expansion in the Niagara Falls area. This was the reason that the Government authorized further diversion of water at Niagara Falls to put through existing power plants. I believe that the Niagara Falls Power Co. asked your Commission for the privilege of diverting added water through existing stations, the benefits of such increased diversion to go to the expanding war industries in that area.

It seems to me, however, that if added power for the mentioned industries is necessary at Niagara Falls the Federal Power Commission should not only authorize but direct the Niagara Falls Power Co. to use the full potentialities of the Adams station. When the members of the House Rivers and Harbors Committee visited the Niagara Falls plants on their St. Lawrence seaway inspection tour they saw idle generators there because the Government did not authorize a further diversion of water there so that the full capacity of that station would be utilized. This amounts to approximately 95,000 horsepower.

It the Federal Power Commission is concerned about expanding industries at Niagara Falls, I would suggest that you advocate the immediate and further development of Niagara Falls rather than the St. Lawrence seaway far up in the northern part of the State. The Power Authority of the State of New York, long an advocate of the St. Lawrence seaway, has recommended a new 25,000 second-feet full head plant at Niagara Falls, with certain power-diversion adjustments there. That authority concluded on page 43 of their 1938 annual report the following:

"The new power plant would add 787,500 horsepower to the 499,000 horsepower installed in the Schoellkopf station, the net effect of which would be to add 677,500 horsepower to the generating capacity of the State, giving consideration to the loss of 110,000 horsepower through the cancelation of present Canadian import contracts. The annual energy output on the United States side of the river would be increased from 2,746,000,000 kilowatt-hours to 7,255,000,000 kilowatt-hours a year, less the energy now obtained from the Canadian contracts, which amounts to approximately 650,000,000 kilowatt-hours a year. The net effect, therefore, would amount to an increase of 3,859,000,000 kilowatt-hours per year in the energy supply of the State. In addition, there would be provided 1,000,000,000 kilowatt-hours a year of secondary energy without further investment, which would be available when the market is ready to absorb it."

From this it would appear that the Niagara Falls project should have priority over the St. Lawrence project, since the latter would take three times as long to complete, and when completed would be great distances from the areas where the demand for power does or will exist—not in the very heart of the electrochemical industry, as is the case at Niagara Falls.

Sincerely yours,

ALFRED F. BEITER.

[From the Buffalo Courier-Express]

BEITER WANTS FALLS POWER DEVELOPMENT—TELLS FEDERAL COMMISSION HEAD WORK THERE SHOULD HAVE PRIORITY OVER ST. LAWRENCE—IDLE FACILITIES CITED—LEGISLATOR CHALLENGES STATEMENT BY OLDS CALLING SEAWAY PROJECT VITAL NOW

WASHINGTON, September 27.—The contention of Chairman Leland Olds, of the Federal Power Commission, that immediate construction of the St. Lawrence project is vital, because upper New York State now is short of power, was challenged today by Representative ALFRED F. BEITER, of the Forty-first District.

In a letter to Representative JOSEPH J. MANSFIELD, chairman of the House Rivers and Harbors Committee, Olds asserted that, even with completion of the St. Lawrence project in 1945, up-State New York will be 394,000 kilowatts short of the capacity estimated as necessary for expansion of essential defense production, unless further additions to generating capacity are planned. Olds said it is silly to consider the St. Lawrence project a rival for coal-burning electric-power plants, because both are needed. He added that "it would be a grave error in military planning to delay immediate construction of the St. Lawrence project."

URGES FALLS PRIORITY

In a letter sent at the same time to Olds, BEITER declared that if there is a shortage of power in upper New York, then development of Niagara Falls should have priority over the St. Lawrence development.

BEITER pointed out that it would require three times longer to complete the St. Lawrence project than to develop Niagara Falls power further, and that, when completed, the St. Lawrence stations will be great distances from Niagara Falls, where the demand for more power exists in electro-chemical and other defense industries.

"If added power for Niagara Falls industries is needed," BEITER says, "it seems to me that the Federal Power Commission should not only authorize but direct the Niagara Falls Power Co. to use the full potentialities of the Adams station.

"When the members of the House Rivers and Harbors Committee visited the Niagara Falls plants on their St. Lawrence seaway inspection tour they saw generators idle, because the Government did not authorize a further diversion of water so that the full capacity of that station would be utilized. This amounts to about 95,000 horsepower.

CITES POWER BOARD ATTITUDE

"If the Federal Power Commission is concerned about expanding industries at Niagara Falls, I would suggest that you advocate the immediate and further development of Niagara Falls, rather than the St. Lawrence seaway far up in the northern part of the State. The power authority of the State of New York, long an advocate of the St. Lawrence seaway, has recommended a new 25,000 second-feet full-head plant at Niagara Falls From this Niagara Falls development should have priority over the St. Lawrence development."

BEITER's challenge came almost simultaneously with release of Olds' letter to Mansfield. At a recent hearing on the St. Lawrence, Olds said some plants served by the Niagara Falls Power Co. would expand production if additional power were available. He listed Carborundum, R. & H. Chemicals, General Abrasives, Hooker Electro-Chemical, Niagara Smelting, Pittsburgh Metallurgical, Titanium Alloy Manufacturing, and Union Carbide companies and the Kimberly Clark and Vanadium corporations.

Conservation of Sheet Steel

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

LETTER FROM FRANK A. HOLMES OF WATERLOO, IOWA

Mr. GWYNNE. Mr. Speaker, in these days of threatened shortage of raw materials every constructive suggestion which would result in saving should be very carefully considered. Under permission granted to me I include a letter written by a man who has made a great study of this subject, Frank A. Holmes, of Waterloo, Iowa. The adoption of the plan set forth in his letter for the continuous use of license plates for automobiles for a 5-year period instead of 1, as at present, would save annually in the State of Iowa 550 tons of steel. The saving to the taxpayers there would be $44,060.

The letter follows:

SEPTEMBER 8, 1941.

Hon. JOHN W. GWYNNE,
Member, House of Representatives,
Washington, D. C.

DEAR JOHN: About a year ago we had a conversation relative to the conservation of sheet steels. During the past year I have made a thorough investigation of the subject and have collected much data regarding the waste brought about by the discarding of automobile number plates each year.

At present there are approximately 37,000,000 sets of license plates issued annually in the United States. These plates weigh 1 pound 2 ounces per pair. Each year, on the 1st day of January and February, this enormous amount of steel is replaced by new steel and that of the past year is relegated to the dumps or otherwise destroyed. The metal content of these discarded plates is such as to justify their continuous use for a period of at least 5 years keeping them current by the use of a small gadget, weighing 1½ ounces, that when properly attached would give full identification and information as completely as the plate on first issuance. As this gadget would weigh but one-sixteenth of the weight of the original plate, a saving of fifteen-sixteenths in sheet metal would be effected. The State of Iowa uses approximately 550 tons of sheet metal annually for its license plates. By putting my suggestion into effect prior to the issuance of the 1943 plates, a savings of 515⅝ tons would be achieved for that year alone and all other States would have a proportionate saving yearly. It is my understanding that a similar practice has been followed in some other States with great success. There is enclosed a small photograph showing the attached gadget in position.

In addition to this suggestion for the future conservation of sheet metal, there is also a large amount of steel to be salvaged from discarded license plates of previous years which have not found their way to the dump but are still in the possession of private citizens. It is estimated that there are from 2 to 4 sets of old plates which are still retained by each of the purchasers of the 37,000,000 license plates issued annually. It is my belief that with publicity similar to that of the recent aluminum campaign and an appeal to patriotic, defense-minded Americans, these old plates could be collected at a central point in each State with a minimum cost to the Government.

It is suggested that the Government make public appeal by radio and press to the owners of discarded plates to have them bundled and delivered to the nearest post office, the same to be franked to some central point in each State.

Assuring you that I stand ready at any and all times to give you any assistance within my power toward the conservation of war materials, I am,

Sincerely yours,

F. A. HOLMES.

The Duty of Members of Congress in the Present International Crisis

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

LETTER FROM A CONSTITUENT

Mr. WHITE. Mr. Speaker, in fulfilling our duty as Members of Congress in formulating Government policies and casting the vote of the people we have the honor to represent, it is highly important that we have an expression of the views of those we have the responsibility to represent. The clear, concise statement of an Idaho businessman, who is a World War veteran, taxpayer, and Democrat, which is inserted herewith, is indicative of public opinion in the district that I have the honor to represent:

MIDDLETON, IDAHO,
September 16, 1941.

Hon. COMPTON I. WHITE,
Washington, D. C.

DEAR SIR: I wish to thank you for what you have done to keep us out of the European war, but it looks like the fight has just begun. It seems as though the President has forgotten the Democratic platform, his preelection pledges, and that we have a Congress.

I have been in business in this little town for the past 20 years, and I just know of one man here that wants to go to war, and he is past 70 years old.

The war crowd wanting us to team up with the Communists has made it unanimous here.

Thanking you for what you have done and assuring you my loyal support, I remain,

Yours truly,

T. H. ANDERSON,
World War Veteran, Taxpayer, Democrat.

A Different Willkie

EXTENSION OF REMARKS

OF

HON. HARRY SAUTHOFF

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

EDITORIAL FROM THE SIOUX FALLS (S. DAK.) DAILY ARGUS LEADER

Mr. SAUTHOFF. Mr. Speaker, one of the many distinguished newspapers displayed on the newspaper racks of the Members' lobby is the Daily Argus Leader, of Sioux Falls, S. Dak., the leading newspaper of the two Dakotas. In looking over the papers the other day, I came across a striking editorial in the Daily Argus Leader which I take this opportunity of calling to the attention of the Congress and the country since it seems to point to a most profound and potent truth. It is also of special interest in view of the remarks by Mr. Willkie recently before a subcommittee of the Senate.

[From the Sioux Falls (S. Dak.) Daily Argus Leader]

A DIFFERENT WILLKIE

Before Wendell Willkie proceeds too far in his attempt to purge the Republican Party of Senators and Representatives who do not endorse President Roosevelt's foreign policies, he might reflect upon what he himself told the American people last year.

Then, if he is a reasonable man, he might ponder about the justification of attempting to oust Congressmen because they endorse the policy that he expressed when he was a candidate for the Presidency.

Here are a few quotations concerning which Willkie should be reminded:

"I want to repeat what I said on several previous occasions that, despite our wholehearted sympathy for the Allied cause, we must stay out of the war. We do not intend to send men from the shores of this continent to fight in any war.

"I believe in national defense, not as a step toward war, but as a protection against it. It is the duty of the President of the United States to recognize the determination

of the people to stay out of war and to do nothing by word or deed that will undermine that determination."—Wendell Willkie at Brooklyn, June 18, 1940.

"Many persons have asked me whether, if I were nominated and elected, I would lead the United States to war. My reply is that the Chief Executive should not lead the people to war unless and until the people insist. It is the attitude of the Chief Executive to prevent war if he can possiby do so. In that awful decision, he should not push Congress. Congress should push him. In a democracy only the people have a right to decide upon war. The duty of a President is to be the restraining and calming influence in all periods of crises.

"And personality, in spite of my belief that we should help the Allies in every way possible, I have been against getting into this war or any other war. And I still am."—Wendell Willkie at Boston, June 14, 1940.

"It would be foolhardy for us to get into war at this time, I don't think we should get into this war at all, but we should show our sympathy for the Allies."—Wendell Willkie at Minneapolis, May 10, 1940.

"Henry Wallace, the Democratic Vice Presidential nominee, said recently that the Republican Party was the party of appeasement. That can mean two things. If he meant working out compromises with the dictators, then he was 100 percent wrong. But if Mr. Wallace meant to say that the Republican Party is the party of peace, he spoke the truth, because I shall never lead this country into any European war. And when I say that I mean it."—Wendell Willkie at Rushville, Ind., September 7, 1940.

"Our political foreign experts should be rid of the habit of whispering through the window and slipping things down the back alley. Our foreign policies should be forthright and clear."—Wendell Willkie in Fortune magazine, April 1940.

"The American people do not want war. They have no idea whatever of joining in any conflict, whether on the Atlantic or the Pacific. They are determined to keep America at peace. In this determination I stand with them. I am for keeping out of war. I am for peace for America."—Wendell Willkie at Cleveland, October 2, 1940.

"We shall not undertake to fight anybody else's war. Our boys shall stay out of Europe."—Wendell Willkie at Brockton, Mass., October 11, 1940.

"But I wish to make it plain tonight that I do not think the New Deal has been either wise or effective in foreign affairs. I do not believe that it has contributed to peace. I believe it has contributed to war. And I believe it has done so because of a fundamental misunderstanding—a fundamental failure to understand the role that America must play among the nations of the earth." (Wendell Willkie at St. Louis, October 17, 1940.)

And that's the record of Wendell Willkie—his own record. Not what somebody else might have said, his opinions were but what he himself said they were.

The only explanation he has provided for the sharp reversal of his position is to describe his effusions last year as campaign oratory.

That is a tragic thing to do. According to his own words he would have betrayed the people who supported him if he had obtained a majority of the electoral votes.

It is pathetic, indeed, that a man who would aspire to such a high office and be so signally honored by a major political party would have such a crass appreciation of his responsibilities.

Actually, as we realize now, the people had no choice in 1940. Candidates Roosevelt and Willkie both posed before the voters as men who had no intention of permitting American involvement in the war.

But when the votes had been counted they threw aside the verbal masks they had donned earlier in the year for the duration of the campaign.

The spectacle is not a pleasant one. The menace of Hitler was as apparent last October as it is now. France had fallen then, and England was being subjected to the heaviest bombardment of the war. Mein Kampf had been written.

We knew then what we know now.

There is a question, a real question, about the role which the United States should occupy.

There is no question, however, about the duty of men who seek high office to state their positions clearly and exactly on a problem so vital to the welfare of the United States.

Some persons still maintain that the voice of Willkie will be a dominant one in Republican councils in the future. It won't be. He is through, and Republican Congressmen have no occasion to worry about his opposition in the ranks of their own party. He now belongs—where his heart has always been—to the Roosevelt Party.

How Do Strikes Strike You, Taxpayer?

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

EDITORIAL FROM THE ALMA (MICH.) RECORD

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Alma (Mich.) Record:

[From the Alma (Mich.) Record]

HOW DO STRIKES STRIKE YOU—TAXPAYER?

We can't read a newspaper or turn on the radio without seeing or hearing something about a strike, something that is interfering with defense programs, and yet the Government officials allow these strikes to go on, and in many cases secretly encourage them while at the same time they are calling for more billions of dollars from the pockets of the people for supposed defense purposes.

Now there is a hue and cry in Congress, promoted by those in authority, to raise more billions to send to Europe.

Only a few months ago a law was passed which was known as the lease-lend bill and that provided for taking $7,000,000,000 out of the pockets of the American people to raise money for John Bull, Tom, Dick, and Harry and other bulls. Now they are demanding of the people six billion more to give or lend to someone outside of our country, and American people have to pay.

If Congress would put a stop to these strikes and make the strikers work on defense programs the same as they make the soldiers fight for defense they would be doing something for the people besides robbing them of their earnings and savings.

If the labor leaders are permitted to strike and hold up defense programs, I see no reason why the taxpayers would not be justified in striking and refusing to pay any more taxes until the other strikers get down to business and work for the good of the country, instead of for their own selfish interests. It is the people's money that is being wasted and strikers are being paid out of unemployment taxes on business, while they sit on the seat of their pants and howl for increased pay for less production.

Here is an illustration of the extent of strikes which should wake the American people up and make them strike conscious to the extent of refusing to pay taxes to finance this kind of nonsense and rank injustice. Read it over for yourself and do your own deciding as to how strikes strike you, and how long you are going to stand for that kind of right down dishonest management of our affairs and the waste of our money.

According to the Bureau of Labor Statistics, man-days lost by strikes in 1941 have increased 500 percent over 1940. During the first 7 months of 1940, 3,091,000 man-days were lost. In the similar 1941 period, 15,750,000 man-days were lost.

The number of strikes called in 1941 increased to 2,505 from the 1940 figure of 1,403.

A month-by-month comparison of numbers of strikes in 1941 and 1940 follows:

Month	1941	1940
January	220	128
February	240	172
March	230	178
April	400	228
May	500	239
June	385	214
July	430	244
Total	2,505	1,403

A comparison of man-days lost month by month follows:

Month	1941	1940
January	625,000	247,000
February	1,000,000	290,000
March	1,400,000	387,000
April	7,800,000	442,000
May	2,250,000	666,000
June	2,375,000	484,000
July	1,300,000	585,000
Total	15,750,000	3,091,000

Now, folks, let us break this record down and see just what it means to us in terms which we can understand, and then let us draw our own conclusions as to the justice and fairness of this sort of management.

Three hundred working days per year are considered as the average working year in all industry taking out Sundays and holidays. Now let us divide 15,750,000 by 300 and the result is 52,500 working years for one man that have been wasted in 7 months, and during all that time we have been yelling at the top of our voices for greater and faster production for defense in order that we may send enough to England and Russia to save our democracy, which is in greater danger from our own nonsense than from anything that is happening in Europe.

If we make another analysis of this situation and take a look at the problem from another angle, it would take 52,500 men working 1 whole year to make up that time lost by these strikes and it really does not take much hard thinking to estimate what could be accomplished in 1 year by 52,500 men working steadily every working day in honest-to-god fashion.

Had there been no strikes, and had the lost years been put in at honest labor, there would be no need for us to be yelling for greater speed for defense production and the material we need would have been produced and would be already in use. The newspapers would not be urging greater haste and the radio announcers would silence most of their senseless chatter about speed.

Just everyday horse sense tells us that the man who sits down and refuses to work is not producing anything, and further that he is not letting anyone else produce anything

for defense, or for any other purpose. Now the Government management that stands for that sort of thing has some loose headgear somewhere that is failing to function, in this time when the country is in great danger and needs the loyal service of every good American citizen.

The danger to the country grows steadily for one reason only, and that reason is the fact that millions of production days are lost because strikes go on and men loaf at public expense instead of producing for defense.

If our public servants in Washington are not big enough and do not possess the common sense and courage to put a stop to this outrage, then it is time for the people to speak right out in meeting to protect themselves.

We Pay Tribute to a Man

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

EDITORIAL FROM THE ST. CLOUD (MINN.) NEWS

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Cloud (Minn.) News of August 14, 1941:

[From the St. Cloud (Minn.) News of August 14, 1941]

WE PAY TRIBUTE TO A MAN

According to a criticizing editorial in a local daily, a group of Northwest Republicans voted to oust Wendell Willkie out of the Republican Party, and HAROLD KNUTSON is credited with heading that group.

In his usual way the editor makes the public believe that nearly everybody agrees with the war policy of his sheet and with the administration's foreign policy, by saying "if it should happen and that is the way it looks." * * * But may we ask whether this is the way it looks, meaning that the public wants war? Our answer is no, and we base this answer on the Other Peoples' Opinion column of the same paper where almost every writer within the trade territory of that paper is for a true defense of our country, because they are true Americans, but where every writer is equally opposed to our giving everything to England and the Communists. On the other hand, the only opinions that are appearing in the same paper in favor of our entry into this imperialistic war of Great Britain comes either from Dorothy Thompson, a paid propagandist, or some National Democratic Committee member who is doing the will of his master, who either holds a political job or seeks one, and who can't express his own honest opinion any more than can a Jew in Berlin.

On the other hand we have HAROLD KNUTSON, who is reminded by this daily editor of William Allen White's letter sent to JOE MARTIN recently, where White urged the Republicans to lay off criticizing the administration's foreign policy if they intend to run for Congress again.

Now let's get to the bare facts. HAROLD KNUTSON voted against our entry into the last war. It was later proven that he used very good judgment in voting thus. Harold then made the most of that vote, and was reelected time and again, during peacetime, because he told the people again and again and again and again that he was against sending troops to foreign soil. Harold did not promise that he was against the true defense of our own country, Harold did not promise that he was going to meet foreign diplomats at high sea or anywhere else to cook up schemes to create incidents, Harold did not promise to tax our people by the billions and then give these same billions to a foreign country that beat us out of our last war debts, Harold did not promise the boys that if they enlist in the Army they could go home after the first year and then double-crossed them and tried to keep them in the Army indefinitely, Harold did not talk about four freedoms abroad and curb his own people in his own district, Harold did not condemn communism in this country and then advocate all-out aid to Russia. We could go on forever, and show where Harold kept his word.

Today we are at a cross road, and so is Harold. For 20 years he was reelected on a promise to keep the American boys off the foreign battlefields, and today, when the time is here to deliver the goods as promised, it is Harold who is keeping his 20-year-old promise. Unfortunately we find him being criticized for wanting to oust a man out of his party who refused to live up to the principles of his party, and who refused to live up to his own promise. We see him criticized by Democratic Party stooges for being an American.

The Sixth Congressional District can justly be proud of HAROLD KNUTSON, for he is a man, a true American, a man who believes in the four freedoms in America. Let's never forget him.

No Seaway Now

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

EDITORIAL FROM THE MONTREAL DAILY STAR

Mr. BEITER. Mr. Speaker, under leave granted to extend my remarks, I include an editorial from the Montreal Daily Star published at Montreal, Canada, in opposition to the St. Lawrence seaway. This is additional proof that the people of Canada do not want the seaway and realize that its construction at this time would hamper the war effort.

The editorial follows:

[From the Montreal Daily Star of August 12, 1941]

NO SEAWAY NOW

Opposition to the St. Lawrence seaway project is growing as time and calmer judgment bring realization that its construction now would not assist the war effort of Canada or the defense plans of the United States, but would, instead, hamper both by drawing away from more urgent enterprises men, money, and materials. When, in March of this year, President Roosevelt, in a message to Premier King, said that power should be developed in the St. Lawrence at the earliest possible moment "for the joint defense effort, including aid to Great Britain," many persons who had formerly stood firmly against the project as being of potential harm and certainly of no immediate value to Canada approved the agreement then made out of patriotic enthusiasm and a lively sense of gratitude to our neighbors for their help.

There was a general, if unwarranted and unreasonable, assumption that within the next few months power required for war industry would be pouring through new transmission lines, and ships building in the Great Lakes finding their way to the sea down the St. Lawrence to participate gloriously in the Battle of the Atlantic. All that was sheer illusion born of enthusiasm. We are now aware that power cannot be developed until from 2 to 4 years have elapsed nor the seaway constructed and in operation in less than 8, and more probably 10, years. We are prepared for a long war, but we cannot be convinced that it will last that long; and we are more than ever persuaded that if power is urgently needed, as Mr. Roosevelt asserts, it can be developed more quickly, more economically, and with less disruption of war industries by the addition of equipment at available sources, rather than by a process of construction that would take years to complete.

This whole view is supported by many considerations. An effective argument can be made against building the seaway at all. But at the moment we are not concerned to do this. What we suggest, indeed, what we assert with all possible emphasis, is that its construction now or within measurable time would add nothing to the war effort, would, in fact, hamper its effective prosecution, and, for that reason alone, should be abandoned.

It cannot be argued with any show of reason that this immense development can be undertaken without drawing heavily upon scientific brains and skilled workmen, to say nothing of the vast numbers of unskilled hands that would be required for the task. Such a diversion of labor and supervisory personnel could be effected only at the cost of tremendous sacrifices elsewhere in our vital war effort, and any sacrifice there inevitably involves the withholding of planes, munitions, and ships from Britain. If we have a choice to make between these two purposes—and assuredly we have—there can be no doubt which one we should make.

These considerations, applied here to Canada, are equally valid in their application to the United States. Our friends and neighbors cannot go "all out" for the production of war supplies to aid Britain and the other democracies and for their own defense, and at the same time cope with a huge and costly deep waterway development which would sap the life blood from essential industry and jeopardize the Nation's safety in any emergency that might arise before its completion.

No authoritative figures have been published about the quantities of labor and material that would be required for this gigantic undertaking, but, admittedly, it will be a project greater than the building of the Panama Canal. We know that in its peak construction year 50,000 men and 250,000 tons of material were required for that enterprise. Where are we to find that number of men now? We in Canada, as our industrial war effort nears its peak, are approaching a labor shortage. The United States will soon be in a comparable position. How, then, can either country afford to divert men and material and brains to a project whose value can be measured only in terms of years?

More emphasis has been placed, in the United States, on the need for power than on the possibility of building ships in the Great Lakes and moving them to the oceans by way of the St. Lawrence. The American public is not aware, as we are in Canada, that potential power to take care of all immediate requirements can be developed in Quebec and Ontario much more quickly than at the Long Sault. More than 5,000,000 horsepower can quickly be acquired, three-quarters of it in

this Province alone, whereas the potential development of the Long Sault, none of it likely to be available for at least 4 years, is only 2,000,000 horsepower. This electricity, according to competent engineers, can be developed in Canada and made available for transmission in a very few months.

No, the argument of urgency relating to the war effort hardly bears examination. If a deep waterway we must have, then in all reason let us have it as a post-war effort. Begun then, it might profitably employ our returned soldiers and the thousands of men who will be released from industries no longer required to produce war material. We must be prepared for a long and arduous period of reconstruction during which employment will be our principal problem. The St. Lawrence seaway project, undertaken then as a gigantic public work, would absorb much surplus labor and provide work and bread for vast numbers who might otherwise endure additional hardship.

Amendment of the Neutrality Act

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Thursday, October 2, 1941

RADIO ADDRESS OF HON. TOM CONNALLY, OF TEXAS

Mr. PEPPER. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD a very eloquent and able radio address delivered by the distinguished chairman of the Senate Foreign Relations Committee, the Senator from Texas [Mr. CONNALLY], on the subject Freedom of the Seas: The So-called Neutrality Act Must Be Amended.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FREEDOM OF THE SEAS—THE SO-CALLED NEUTRALITY ACT MUST BE AMENDED

The cruel and brutal war now raging in Europe and Asia, though its land battles are thousands of miles from our shores, has more and more affected our people and their interests as its bloody chapters have unfolded. The threat to our national security, to the safety of our territory, to the integrity of our institutions, and to the preservation of our international rights has become clearer and more imminent with each new conquest, with each new enslavement of a once free people.

Moved by the devotion of the American people to peace and their abhorrence of war, the Congress in 1935, years prior to the invasion of Poland, enacted an arms-embargo resolution, mistakenly called a Neutrality Act. It prohibited the shipment of arms and munitions from the United States to any nation at war. It was passed upon the theory that such a course would discourage armed conflict abroad and prevent our involvement therein. That act was not in truth a Neutrality Act. It limited our rights as a neutral nation. It denied to our citizens rights to which they were entitled by immemorial international sanctions. We laid upon our citizens prohibitions against the exercise of rights guaranteed to them by international law. It was soon revealed that the original act was unsound, and in 1936 it was amended. In 1937 Congress again modified its provisions.

After Hitler hurled his Nazi legions into Poland, in September 1939, it became amazingly apparent that the arms embargo operated to deny to peaceful nations and to peoples who had not armed to the teeth and who had not builded up great military machines securing arms and munitions from neutral nations for their necessary self-defense. The continued existence of such an act gave a premium to conquerors, to totalitarian masters who had through the years been carefully arming in order to overwhelm and subjugate nations who felt secure in their neutral and peaceful lives. The Nazi powers, equipped with all of the modern weapons of war and all of the mechanized equipment which ingenuity and genius could devise for the destruction of human life, did not need to acquire arms or munitions from America. The peaceful and unoffending nations of Europe, who were unarmed and defenseless, did need arms and munitions from the United States and other neutral nations. Under international law, they had a right to procure, and the United States had a right to supply, war materials and munitions for the defense of their homes and their lives.

In the fall of 1939 the Congress enacted the arms embargo repeal resolution. It removed the prohibition against the sale and shipment of arms to nations at war. However, still in the interest of peace, motivated by an extreme anxiety to preserve the peace and to protect the safety and the lives of the American people, the act laid limitations upon the freedom of our shipping and upon the rights of our citizens. It was required that nations at war purchasing arms in the United States should acquire title to the arms and munitions secured before the same should leave our shores. American ships were denied the right to transport arms and munitions. American ships were prohibited from carrying on commerce with any nation at war. The President was authorized to establish combat zones in belligerent areas into which American ships could not sail and into which American citizens were not permitted to travel, except under unusual circumstances.

These regulations were established in the hope and belief that if American ships did not sail to the ports of belligerent nations and were not permitted within combat zones, they would not be attacked or sunk upon the high seas, where they had a right to sail under international law, accepted and recognized by all civilized nations. That hope and belief have proven illusory. The brutal Nazi philosophy which on land conquered and subdued neutral and peaceful Holland, Denmark, and Norway, and Belgium, who had committed no wrong, unless the love of home and the desire to live in peace be wrong, with its swarming submarines and surface raiders upon the seas, sank the ships and murdered the citizens of neutral nations. The same defiant and truculent and ruthless spirit that dominated the German Government during the World War, enhanced and brutalized by the Nazi doctrines of Hitler, has recently attacked and sunk American merchant ships and a Nazi submarine attacked a United States naval destroyer. These attacks were not made upon ships within combat zones. They were not made upon ships trading with or sailing to nations at war. They were made upon American ships on the roadways of the high seas, where international law says they had a right to be, and where the laws of the United States say they had a right to be.

Hitler has decreed the death of our citizens and the destruction of our ships wherever his armed vessels may find them—wherever his skulking assassins of the seas, lying in wait for them, may shoot them in the dark and send them to graves in the watery deeps. Unrestricted submarine warfare means unrestricted murder, unrestricted assassination, unrestricted defiance of, and contempt for, all law of humanity and of civilized nations.

When Hitler, in September 1939, first hurled his Nazi legions into Poland, we entertained the fatuous hope that the war in Europe was over the Polish Corridor and Danzig. We eagerly pressed to our bosom, the hope that it would be localized—that it was a war of boundaries and territorial arrangements between Germany and Poland. Still entertaining that hope, the provisions of the Embargo Repeal Act, which limited our shipping and established combat zones, and prohibited the arming of merchant vessels, were adopted.

However, when Denmark was crushed—when Holland, peaceably sailing upon its canals was brutally bludgeoned—when Belgium, daring to stand upon its own soil, unoffending and neutral, was attacked by all the cruel weapons of might and murder—when Norway, living amidst its mountains and fjords, believing that it was distant from the bloody arena of war, was assailed from the sea and upon the land and from the air, by millions of missiles of death, the world began to see and the United States began to realize that Hitler's war was not to be a localized war—that it was not to be a war to secure the rights of the Nazis to Danzig or to a crossing of the Corridor. We began to see that it was a war to destroy the rights of all other nations, wherever their boundaries might reach, however peaceful their conduct, however innocent their lives, however guileless their behavior. We began to see that the Hitler ambition, that the Nazi terror, paused at no boundary, hesitated at no sea, halted before no mountain range, but, with an ambition greater than Lucifer's, with a savage lust for power, surpassing that of Genghis Khan, with a bestial appetite for loot and plunder and mastery, superior to that of Attila, the Hun, hurled their swarming armies upon their neighboring nations in a campaign of world conquest and world dominion. If the classic examples of Poland, Denmark, Holland, Belgium, Norway, Yugoslavia, Greece, and other nations, are not convincing, the astounding case of Russia removes all doubt. Russia, a supposed sympathizer, though not a participant in the war, without pretext and without warning, was barbarously and suddenly attacked by all of the might and terror of the Nazi armies. Russia, living upon her own soil, having no part in the war, guilty of no aggression against Hitler, was made the victim of unexpected and murderous assault.

That same ruthless and relentless spirit; that same overmastering ambition; that same cruel and barbarous purpose, animate the fleets of submarines and of surface raiders that Hitler has sent out upon the seas, that belong, not to him, but belong to all the nations of the earth, to master them, to drive from them, the ships of all nations that do not fly the Nazi flag, to murder the citizens of all other nations that do not accept his rule and that do not bow the knee to his monarchy of military might.

But there are those who say that Hitler has no designs to attack or to conquer the United States or the nations of Central and South America. To these credulous minds, I would point to the trials in the courts of the United States in New York, of a horde of Nazi spies. If Hitler has no designs upon the United States; if he broods no injury to our people; if he contemplates no hostile action against us, why does he fill our land with spies to practice their espionage and sabotage, and to poison the minds of those of our citizens who may be unsuspecting and credulous? I point to Nazi infiltration into the countries of South America. The press has lately informed the world of the discovery of Nazi intrigue and Nazi conspiracy against a number of the republics of the

Western Hemisphere. These republics, vigilant and jealous of their sovereignty, have discovered these plots and these nests of treason and have taken steps to extirpate them. If Hitler has no designs upon the sovereignty, upon the security, and upon the territory and institutions of Latin-America, why does he set up foci of infection to spread his poisonous doctrines throughout the constitutional systems and the life of our Latin-American friends and neighbors?

All of these revelations, this unmasking to our gaze of the stark and naked menace of Hitler and his Nazi terrorism, have convinced civilized men who love their country, who hate conquest and oppression, to determine that Hitler and his Nazi terrorism must be destroyed.

Hitler seeks to dominate both the land and the sea. His denial of the right of other nations to sail the seas is a challenge to our undeniable rights and a threat to overthrow and destroy them. The restrictions in the arms-embargo repeal against the arming of merchant ships and the sailing of our vessels in combat zones or to nations at war were in derogation of our rights. They were domestic regulation of our citizens in the hope that our ships would not be attacked. As has already been seen, that hope was futile. Under Hitler's decree, our ships cannot sail upon any sea which he can reach with his submarines, with his surface raiders, or with his aircraft.

Hugo Grotius, the celebrated authority on international law, as early as 1608, laid down the rule "Every nation is free to travel to every other nation and to trade with it." He there enunciated the doctrine of freedom of the seas. He exploded the theory that the seas were the property of the nation with the longest sword. By the nineteenth century, it was universally accepted that the seas were the common property of all nations. The United States, since its foundation, has adhered to the doctrine of freedom of the seas. Under the Presidency of John Adams, France depredated upon our commerce, and in 1798, the House of Representatives, in an address to the President, stated that France had proclaimed "predatory warfare against the unquestionable right of neutral commerce, which, with our means of defense, our interests, and our honor, commanded us to repel." Congress authorized armed vessels to resist the armed vessels of the French. The case of the Barbary pirates is a classic example of our insistence upon the freedom of the seas. The United States Navy was dispatched to the Mediterranean, the pirates were subdued, and levies upon our commerce were terminated. The War of 1812, in its essence, was in defense of freedom of the seas. The doctrine was maintained by Madison when he was Secretary of State in 1806. Van Buren, in 1830, in his instructions to Ambassadors, asserted the doctrine.

It will be recalled that before and during World War I, our rights upon the seas were attacked by the German submarine campaign. In April 1916 the Government of the United States warned the Imperial German Government against the violation of our rights. The warning was disregarded and our ships were sunk and our citizens were murdered. During the entire period of the World War, and in all of the years that followed, the Government of the United States has steadfastly maintained its right to the freedom of the seas. It is true that there are those who claim that by the enactment of the arms-embargo repeal, the United States surrendered its right to the freedom of the seas. That is an erroneous assumption. While that act would restrict freedom of citizens and our shipping, the act expressly provided in its preamble that the United States surrendered none of its rights under international law. It was so specifically stated in the preamble to that act, which was in the form of an amendment offered by the Senator from Texas, now speaking. It was specifically provided that the restrictions contained in that act were domestic regulations for the control of our citizens and that "the United States waives none of its own rights or privileges or those of any of its nationals under international law." It was further specifically provided that "the United States reserves the right to repeal, change, or modify this joint resolution, or any other domestic legislation in the interest of the peace, security, and welfare of the United States and its people."

In the light of our historic and traditional maintenance of the doctrine of freedom of the seas, a doctrine that is essential to our continued growth and development as a great maritime and commercial nation, a doctrine, not limited to our own selfish interests, but one essential not alone to the safety of our own shipping and of our citizens upon the high seas where they have a right to be, but essential to the safety of the ships of other peaceful and neutral nations that may carry on commerce with the United States, we should now reassert and reordain our adherence to the doctrine of freedom of the seas by modifying and amending the so-called Neutrality Act. We are now building a two-ocean Navy, a Navy that will be superior to any that floats upon the oceans. It shall be dedicated to the protection of our people; to the protection of our citizens upon the sea as well as upon the land; to the security and to the sanctity of our territory, our institutions, and our soil. Shall we, at the ukase of a would-be master of the world, abandon the seas? Shall we at the edict of a would-be Napoleon, cringingly, withdraw our commerce and our ships from the seas where all civilized nations for centuries have said they have a right to be? The establishment of combat zones has failed. Hitler recognizes no combat zones. He sinks our ships wherever they may be. He sends his lurking submarines into our defensive waters He defies us. He murders our citizens. He assassinates our ships.

The repeal of the so-called Neutrality Act would not be unneutral. After its repeal, the United States would be a neutral under international law. That act prohibits the arming of our merchant ships. I favor the repeal of that provision. It is my view that merchant ships that are now being ruthlessly attacked upon the high seas, while on lawful business, ought to be allowed to arm for their necessary self-defense; for the defense of human lives upon their decks; for the defense of their property and their rights.

In the interest of our own safety, for the preservation of free government and democracy in the world, the Congress of the United States enacted the Lease Lend Act, to extend aid in the form of arms, munitions, and ships to the nations fighting against Hitler and his doctrines. That aid to be effective requires the delivery of arms, munitions, and implements of war where they can be successfully employed. It takes ships, it requires cargoes, to deliver weapons to the embattled democracies. Whatever the original views of any citizen may be with respect to the Lease Lend Act, it has become a national policy. It is our country's policy. We should support it in unity and with vigor.

It is, therefore, my further view that the so-called Neutrality Act should be amended with respect to the freedom of our ships to sail wherever they are permitted to sail under international law. I favor the removal of the ban against their entering combat zones or going on lawful missions to the ports of nations at war. These are our undeniable rights under the law of nations. We have, in years that are gone, in glorious fashion, shed our blood for their maintenance and for the protection of the rights of our citizens. Shall we surrender them? Shall we cringingly abandon them? Shall we succumb before this wild and fantastic plot of Adolf Hitler for world empire and world dominion? Shall we tremble because the conqueror stretches forth his sword?

Our forefathers chose our way of life. Their sacrifices, their sufferings, and their service fashioned it and builded it and fortified it. Our system, our way of life, our institutions, our love of law and of liberty must, and shall be, maintained. All the terrors and taunts, all the cruel contempt for law and for the dictates of humanity, of Hitler and his Nazi minions shall not prevail against us.

Help for Small Business

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, October 2, 1941

RADIO ADDRESS OF ARTHUR CAPPER, OF KANSAS

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio broadcast delivered by myself over station WIBW, Topeka, Kans., September 28, 1941, relative to the need of "help for small business."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends in the radio audience, the small businessman—the little fellow in the business world—faces more than making sacrifices in the $120,000,000,000 national-defense program.

The little fellow in business and his employees are in line to be the sacrifice in the national-defense program.

What that means to Kansas and surrounding States in the Mid-Continent area is something to think about.

Take our case in Kansas.

The foundation of our Kansas life and living is, of course, agriculture.

But the life and living of Kansas communities, while resting on farm prosperity, actually is built around the small industries and the small business establishments in our Kansas towns and cities.

We in our section do not have huge corporations, with thousands of employees.

We have hundreds—aye, thousands—of small business establishments around which the life of our communities is built.

When a small businessman goes to the wall, when an industry closes down, when a garage or a beauty shop goes out of business, the community suffers a heavy blow.

When these small businesses are closed out by the scores and hundreds and thousands, as they are being squeezed out by priorities in the defense program, the blows fall with terrific force.

Not all of you belong to the Rotary Club or Kiwanis, or Lions or similar organizations of businessmen, nor to the local chamber of commerce.

In ordinary times the ordinary citizen perhaps doesn't think much of such organizations. He does not see that they directly affect him.

But how would you like to see the bulk of the business and industries in your community that are represented in Rotary, etc., close up shop, discharge their employees, and quit doing business?

Well, my friends, that is the picture ahead of us this winter, according to the keenest business observers in Washington and over the country.

I have been warning of the danger to small business from the way the national-defense contracts have been handled for months past. So have others. Gen. Hugh Johnson calls it the slaughter of the innocents. Trade magazines, columnists—outside of those too busy propagandizing for war abroad to see what is happening at home—have warned of the dangerous situation from letting the bulk of contracts to a few dozen huge corporations.

Finally the administration itself has become alarmed, though I fear somewhat belatedly.

The shadow of priority casualties in business has fallen across the national-defense picture in Washington, as well as in the Mid-Continent.

Floyd Odlum, an exceptionally able businessman brought to Washington by the President to take a high position in the national-defense program, recently named Director of Contract Distribution Division, last week sent out a letter to 56 major defense contractors. In that letter he asks these to name "farming out directors" who will work with Government in spreading subcontracts to smaller firms.

It is necessary to spread defense orders, Director Odlum warns. Unless it is done, Director Odlum says, we cannot avert "the social catastrophe and economic dislocation which might follow if these small enterprises are put out of business. Such a tragedy must not happen."

Director Odlum does not mince words.

"Because of the tremendous all-out defense effort," he says, "thousands of small businesses which have been busy up to now face shut-downs due to lack of materials for civilian production.

"The personnel of these small enterprises represents the solid backbone of the country. They are our church leaders, our civic workers, our charity heads, our supporters of fraternal and public-spirited organizations."

I would say it this way. These men are the life of the small towns and cities and surrounding communities of America. Put them out of business and you have left only huge corporations facing huge labor organizations, waging relentless economic war. And when we reach that stage, the next step will be what some of the planners want—Government control of all business, all industry, all people in a collectivist state.

This danger to our American way of life from the destruction of small business—that really means the elimination of the individual in business of all kinds, including agriculture—is no figment of the imagination.

I am a member of a special Senate committee to study problems of American small business. Preliminary studies have been made by our committee. They show small business enterprises being strangled. One bicycle manufacturer has had to close down because he cannot get soldering rods. At the same time he sees British-made bicycles being imported as usual. He reads advertisements that these English-made bicycles are coming through despite the war, and may be purchased just the same as if there were no war.

Senator MURRAY, of Montana, a Democrat, a staunch new dealer, a supporter of the President's foreign policies 100 percent, is chairman of this committee. He is more than shocked. He is alarmed at what the preliminary investigations have shown. In a statement made public this week Senator MURRAY says small business enterprises have been discriminated against right and left.

"The administration of our defense program has been extremely muddled"—I am quoting Senator MURRAY—"big business dollar-a-year men," declared Senator MURRAY, "still drawing huge salaries from private corporations, have moved into control of the Defense Commission and have made it a badge of honor for big business.

"A campaign is now on to expand enormously the plant capacity of big business"—I am still quoting Senator MURRAY, New Deal Democrat. I want you to know what I am saying is not the attack on the administration from a disgruntled Republican, accused also of being an isolationist. The words I am quoting come from a New Deal Democrat who also is an interventionist.

Continuing, Senator MURRAY says:

"This means that big business will further monopolize defense contracts at a time when small plants all over the country find themselves in a desperate situation and are being forced to curtail production or close up because of lack of materials for their regular civilian production and their inability to secure any defense contracts."

Director Odlum says that if the industry or community facing shut-downs from lack of materials and inability to get contracts will notify the nearest office of his Contract Distribution Division (or Director Odlum himself) immediate steps will be taken to help the situation. Contracts or subcontracts may be awarded, at prices as much as 15 percent higher than have been allowed big contractors. These are to be accomplished through so-called special directives to purchasing divisions of the Army and Navy.

I sincerely hope, my friends, that Director Odlum is able to get results, quick results, and effective results. Otherwise, I hate to think of what is going to happen.

In this connection I have been hearing of some interesting planning being done by some of our best minds, on what Uncle Sam can do to save Europe after the war is over. These plans include feeding Europe from reserve stock piles of food—and I am for that.

But some of these planners (notably Clark M. Eichelberger, of the League of Nations Association, Inc., and also the prime mover in the Committee to Defend America and other interventionist organizations) are going much further than that.

Mr. Eichelberger says his organization has committees at work, by implication in conjunction with some administration people, also to help Europe in at least three other ways:

1. Use our $25,000,000,000 of gold to back an international European currency when the war is over.

2. Work out and finance from the United States Treasury a huge public-works program for Europe—in other words an international P. W. A. for Europe at Uncle Sam's expense.

3. Also in his program is a comprehensive unemployment relief program for Europe after the war—also backed by the Treasury of the United States.

Well, my friends, that is a pretty large order. That is planning on a large scale.

I do wish some of these international planners of ours would take a few days off and do some planning on how we are to preserve the small business enterprises of the United States, and the republican form of government of the United States, before bringing this millenium to Europe.

President Roosevelt continues to move steadily toward his goal in the field of foreign relations—the goal of all-out war.

His latest proposal, still unofficial so far as sending any message to Congress about it, calls for either modification or repeal of the Neutrality Act. He wants congressional authority to (1) use American-flag ships and American seamen to carry war supplies to Britain, Russia, China, and so on; and (2) to arm American merchant ships.

This proposal raises two questions:

1. The preservation of constitutional government by returning to Congress the responsibility for making decisions involving peace or war. Needless to say I think that is the proper procedure to follow. I sincerely wish that the President would not take us into war by the announcement route.

2. Whether or not Congress should now turn on the green light for further intervention in this European war, I am opposed to further war steps. I say Congress should vote against further intervention.

But if further steps are to be taken—and I am opposed to taking them—I say the decision should be made by Congress. Let me read you what the Constitution says, and just figure for yourself whether the President's "shoot on sight" order squares with the spirit, or even with the words of the Constitution. I read from the Constitution:

"The Congress shall have power to define and punish piracies and felonies committed on the high seas, and offenses against the law of nations. To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water. * * * To provide and maintain a navy. To make rules for the government and regulation of land and naval forces."

What I have just read is what the Constitution says.

It is plain to me that the Constitution places the authority and the responsibility in the Congress. I think the editor of the Washington News stated it concisely and correctly:

"If President Roosevelt, though he be the fount of all wisdom and patriotism, should put this country into war without congressional consent, this would not be a democracy."

The result of such usurpations of authority by the President, even though it is in fact and reality impossible for the Congress to countermand orders or abrogate actions already taken—the result is bound to be loss of faith in the constitutional processes of government. That is not constitutional government; it is one-man government, no matter by what words you gloss over the fact.

When the Executive, through short circuiting, bypasing the Congress; through subterfuges and deceptions, causes Americans to lose faith in the form of our government, we lose our democracy.

I shall oppose repeal of the Neutrality Act. We are partly in the war, in the shooting war. Congressional approval of arming merchant ships and sending American ships into belligerent ports and combat zones would be taken at home and abroad as a blank check to the President for undeclared war. Then again the Constitution, the Congress, and the people would be circumvented by the White House.

Addresses New Jersey State Democratic Convention

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, October 2, 1941

ADDRESS OF HON. WILLIAM H SMATHERS, OF NEW JERSEY

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the able address

delivered by the Senator from New Jersey [Mr. SMATHERS] before the New Jersey State Democratic Convention on Tuesday last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Governor Edison, Mr. Chairman, members of the New Jersey Democratic State committee, county chairmen, candidates for office, fellow Democrats, ladies and gentlemen, I was amazed and extremely amused to read where Representative EATON, keynoting for the Republicans last week, blasted the New Deal and the administration, but said that he and the Republicans were for the President's foreign policy. What rank hypocrisy. Representative EATON is no more for the President's foreign policy than Hitler is for our foreign policy. If you doubt what I say, look up his record, and you'll find he voted against lifting the embargo, the Lease Lend Act, the Draft Act, extension of the draft, and every measure that went into the forging of the President's foreign policy. Of course, now looking back over the last year and a half, he sees that the President was right, and he was wrong, so he's now for the President's foreign policy. You know, these Republicans remind me of that rare but now extinct bird, known as the "flu-flu" bird. It flew backward, because it didn't give a damn where it was going, for it was trying to find out where it was coming from.

There is not a man or woman in this audience, or in the State of New Jersey, for that matter, who does not realize that this Nation, yes, the entire world, is passing through the gravest crisis that ever confronted mankind. This being the case, I have come here today to talk to you about the Nation's foreign policy and world affairs.

Five years ago this fall you were good enough to send me to the United States Senate. I went there pledged to support the principles and policies of our President. That I have done faithfully and unflinchingly. That I did cheerfully and proudly. That I would do again under similar circumstances.

It was with great pleasure that I supported the President's remedies for curing the lingering pains of the most stubborn and prolonged depression the world has ever witnessed, and one which, mind you, the wise Republicans and the erudite Hooverites had struggled with in vain and abandoned in despair. All of the President's depression measures I voted for, because I had implicit faith in the President's superior judgment and fearless leadership. Besides, I could not think of, nor did I hear of, any better remedies than those proposed by the President being offered by anyone else. Time and events have since shown that the President's remedies, while not all perfect, were yet the soundest and the best to meet the sudden emergencies of that time. Of course, there were mistakes here and there, as is always the case with men of action and courage when dealing with difficult and unprecedented problems.

In like manner and for similar reasons, ladies and gentlemen, I have followed and supported the President's remedies for social reforms—remedies designed to improve, in particular, the conditions of the laboring man and the farmers, and, in general, for the improvement and betterment of the living conditions of the middle and lower classes—not forgetting the "forgotten man." When we had about worked our weary way up and out of the deepest and darkest depression of all times and began to see the light of day and to enjoy the first fruits of a brighter and better social order in America, along came from abroad the dreaded and destructive dictator war. We hated it—all of us hated all of it. We wanted no part of it. We had been badly burnt once before by the flames of a European war. So we did everything—tried everything—to confine the conflagration to the other side of the broad Atlantic. We tried neutrality; we tried embargoes, evasions, equivocations; we discontinued European commerce and trade; we denied England and France cash and credit; we called home our merchant marine; we isolated ourselves; we insulated our shores. For a long while we stood stupidly, gazing and gaping from afar at the death and devastation left in the wake of the strutting dictators as they marched across the Continent of Europe, looting, plundering, enslaving.

Gradually, however, Americans began to awaken—some of them are still asleep—and, as they awoke, they began to hate and fear the dictators of Europe and to realize that their eyes were fixed on America as their ultimate goal. But we dared not criticize them or offend them. So we appeased them, and thereby we emboldened and encouraged them the more. On the other hand, we keenly sympathized with the Allies, but we were too timid to express our sympathy, or give them openly any substantial comfort or support. Thus, my friends, we weakened their morale and we enfeebled their resistance.

In fact and truth, we were too intelligent to remain indifferent any longer, yet we were too craven to take a positive stand on the side of the oppressed. So, unchecked and unrestrained, this fire and flame of the dictator leaped from city to city, nation to nation, continent to continent, the sparks of which flew so far as to fall upon the Western Hemisphere. In Central and South America revolts began to break out, and stern measures had to be resorted to, to put them down. In the United States of America, warehouses, storehouses, wharves, and docks laden with supplies and armaments were suddenly destroyed by mysterious fires and explosions. Strikes multiplied in the defense plants. Military secrets and plans were stolen and sent abroad. By such despicable dictator tactics the American people finally realized that these dictators could not be trusted, and that this was no European war in which America had no interest or reason to intervene, but a world conflict from which we could not possibly escape.

Then came the Lease Lend Act, which epitomized the reassertion of America's mighty influence and her lofty independence in world affairs. By the same act America reestablished her traditional rights to the freedom of the seas, defended and battled for by every President from Washington to Wilson.

And so, my friends, while America wandered in the wilderness of appeasement, inaction, and isolationism, she was also wasting huge sums of money and precious time and materials. During that crucial period history was made in America of a character not creditable to the sons and daughters of Valley Forge, because America hesitated, debated, and divided on her attitude toward a world conflict which not only involved her own life and liberties, but the life and liberties of the entire civilized world.

But, through all the fright and hysteria, through all the chaos and confusion, through all the indecision and irresolution, through all the death and destruction caused by the mighty dictators, there have been, and still are, just two men in the whole world, world leaders, who were neither fooled by, nor afraid of, the bullying dictators. One was the inimitable and invincible Winston Churchill. Had his advice and warnings been heeded, Europe's magnificient cities and buildings would not today be reduced to ashes and ruins. Neither would her peaceful and liberty-loving people be reduced to starvation and slavery.

In like manner, if the advice and warnings of the other great and fearless leader, Franklin D. Roosevelt, had been heeded, the destructive dictators would have been quarantined and imprisoned in their own lands long before they became a world menace, and long before they began to bomb and blitzkrieg Europe to her knees and to her death. But when these warnings were given—before the storm broke—the Chamberlains were in power in England. They knew it all; they could be told nothing. So they decried and ridiculed the advice and warnings of Winston Churchill with the result that today poor Chamberlain is in his grave, and the proud people of England are sleeping in basements and bomb shelters.

Likewise, in America the Chamberlains were in power when President Roosevelt first began to warn the American people of the dictator menace. Like the Chamberlains of England, the Chamberlains of America had inside information—not available even to the President—about dictator ambitions and dictator intentions. They assured America there would be no World War No. 2. They knew it all; they would be told nothing. They had learned nothing from the last war, or since the last war; neither have they learned anything from the present war, or from the plight of Belgium, Holland, and France. These false prophets are the isolationists of today—the American Chamberlains. They carry a little red, white, and blue flag, instead of the traditional umbrella; but if given their way, they will be more deadly to America than Chamberlain was to England.

So today, my friends, the first and greatest menace to America is Hitlerism. The second greatest menace that affects America today is the subversive influence of the Lindberghs and the NYES, because, as prominent Americans, they preach and practice continually German propaganda for the sole purpose of destroying the morale of our American soldiers and undermining the confidence of the American people in their Government and in their Commander in Chief. But try as they may and have, Franklin D. Roosevelt is not to be defeated or destroyed by such "scuttlers" as the Lindbergh's the NYES, and other isolationists whom history will bury in ignominious oblivion. While, on the other hand, Franklin D. Roosevelt, with the aid of Churchill and other fearless leaders of the Old World and the New, will bring about the ultimate defeat of the dictators.

And so, ladies and gentlemen, to these two great men—Roosevelt and Churchill, who had the vision to see and the courage to act—we owe our security of today. In the hands of these two great men rests the future of America, the liberty and freedom of the American people, and the future of all the democracies throughout the world. Their leadership has brought us to a point where we are prepared to resist enslavement, and their continued leadership will bring about the destruction of Hitlerism and reestablish peace throughout the world. A peace based on man's individual security, liberty, and equality, with a guaranty to the people of any nation to have any form of government they may choose. To this leadership we pledge our faith, our confidence, and our full cooperation.

Thank you

Addresses Gold Star Mothers

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, October 2, 1941

ADDRESS OF HON. MILLARD E. TYDINGS OF MARYLAND

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting and eloquent address recently delivered by the senior Senator from Maryland [Mr. TYDINGS] in honor of Gold Star Mothers' day, at the Army War College, Washington, D. C., on Sunday, September 28, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mrs. Burling, ladies, and gentlemen, the grim, tragic, and dramatic events of the present, call vividly to mind the limitless and unpayable debt which we owe to the Gold Star Mothers of America and to their heroic dead.

For the devastation and loss of life and treasure in the wars of Europe, Asia, and Africa serve to build in our hearts and minds strong bridges of memory, and over these bridges we travel again in fancy to the stirring days of 1918, when the sons of the Gold Star Mothers of America were fighting beneath the flag of our country on the seas and on the battlefields of Europe.

The sons of these mothers were then our comrades in the first great World War. With these young comrades of 23 years ago we shared the joys, the hardships, the sorrows, and the high drama which were inevitably a part of that titanic struggle.

Those comrades who made the supreme sacrifice, who gave the last full measure of devotion to their country, have, lo these many years, been sleeping in the little green tents of eternity, waiting for the last bugle call of all to blow. Twenty-three years ago they were the flower of the young manhood of the United States. They came to serve their Nation from the farm and the factory, the forest and the mine, the countinghouse and the university. Life was ahead of them—a long life—a span of time wherein dreams would come true.

But the Nation called them from these dreams and youth, laughing youth, responded to that call. Some did not come back, the sons of the mothers for whom this day has been set aside. Those who fell on the field gave their all—all they hoped and longed to be. No more for their eyes will the morning zephyr ripple across fields of waving wheat, in the countrysides of America. No more will they see the rosy glow of sunset, nor know the handclasp of their loved ones and friends.

But we, who are the beneficiaries of their sacrifice, can still sense the magnificent spectacles of nature, the comradeship of our fellows, and still work to make our dreams of youth come true, only because of them.

And so it has been throughout all human history, and particularly the history of the United States. Our greatness, our achievements, our institutions, our security, our future, we owe to our heroic soldier and sailor dead.

Yet we continue the struggle to find ways and means of letting our innermost thoughts have play. And so this great Nation has sanctified this day, set it aside for national observance that we might lay an invisible garland of flowers on the graves of our departed comrades wherever they may be, and pay a fitting tribute of reverence to the great mothers who bore them—to let you know they and you have not been forgotten.

In doing so, we are actuated by the richest and finest attributes of which the human heart is capable. To the mothers of these illustrious sons, these great American heroes, we try to say we too understand, if only in part, what you and they have given to this Nation.

We see all the women's days, the women's hours, of care and training, affection and guidance, with which you surrounded your sons, in order to bring them to full and sturdy manhood. These boys of yours have made the utmost sacrifice for us, and that sacrifice we want you to know we share in a very deep fullness.

I look upon the Gold Star Mothers of America as the real aristocracy of this Nation—a legion of women which is recognized both by religion and civilization as the greatest aristocracy of all—one not of position, wealth, or of material things, but an aristocracy of unselfish service and unsurpassed sacrifice for others. And that is the way this Nation feels, and will always feel, about you, the Gold Star Mothers of America. Whether we be soldier or civilian, we too treasure the memories of your heroic sons, and we revere and honor you and give you the fullest meed of our tribute and devotion—for those great men who were your very flesh and blood.

Now again this Nation is confronted with great problems and decisions, which have a kinship to the problems and decisions of 1917 and 1918. In solving these problems and making these decisions, we would be unworthy of you and of the fine tradition of your sons, if we did not make our decisions in the light of your great and measureless gifts to the people of this Nation. We shall, of course, counsel one with the other. We will try to view the unfolding of events realistically, calmly, and with the ultimate welfare of our country ever in mind.

It is inevitable that we shall frequently differ. It is certain that we cannot always see eye to eye. But let us not lose heart, for that is the genius of America—its strength and not its weakness. All of us, in office and out, will try desperately hard to find the true, sure road to our country's future success, security, and continued greatness.

Whatever course we may take, whether it be one which, with the aid of Providence, will keep us out of another holocaust—or whether an unkind fate shall decree that we reenact the tragic happenings of 1917 and 1918—America must act with unity, patriotism, courage, and vision. To do less would be to betray you and all that you have done to make the present-day America the greatest Nation on the face of the earth.

Because of you and yours, we shall chart our course with a higher degree of love of country, with a fuller appreciation of the blessings of its citizenship, and with the firm purpose that this Nation shall weather the storms of the future, that it shall continue to be a Nation established and conducted upon those principles of freedom, equality, justice, and humanity. For it was for these things your sons fought and died and for which American patriots have throughout the years sacrificed their lives and fortunes.

Gold Star Mothers, the Nation salutes you, it honors and reveres you, it loves you. Your sons have not made their sacrifice in vain.

American Foreign Policy

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, October 2, 1941

ADDRESS OF HON. H. H. SCHWARTZ, OF WYOMING

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject of American foreign policy delivered over the National Broadcasting Co. network by the junior Senator from Wyoming [Mr. SCHWARTZ]. The address was delivered on October 1.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NOT MATTER FOR PARTY POLITICS

America's foreign policy in the present world war is not a matter for partisan politics. That policy, solely one for our own national defense, is not to be confused with domestic issues.

Our foreign policy has the support of most of the more prominent and influential men and women in both Democratic and Republican Parties. It is endorsed by the great mass of the American public. It is criticized by some few Americans. That is to be expected in any democracy. They make up in noise what their arguments lack in reason.

It is necessary to make some reference to the President of the United States; not because he is a Democrat, but because the people elected him to office under the system of voting provided in our Federal Constitution; also because he is the chief point of attack by these critics, and because he first realized and warned us of our danger. It is proper therefore to refer to certain planks in the Democratic platform of 1940, a platform specifically approved by President Roosevelt in the presidential campaign. Some of the President's critics charge him with inconsistency, if not worse. When the whole matter is considered inconsistency disappears or consistency ceases to be a virtue. To those who insist on literal consistency I quote from Emerson: "A foolish consistency is the hobgoblin of little minds, adored by little statesmen."

One plank of the Democratic platform reads:

"The American people are determined that war, raging in Europe, Asia, and Africa, shall not come to America."

The President has sought to keep that pledge by every possible means. To that end we are supplying nations in Europe, Asia, and Africa with war material necessary to defeat Hitler, as promised in the Democratic platform. Hitler, defeated in Europe, will never come to America; victorious in Europe, he will knock at our gates.

AMERICAN LEGION APPROVES

The American Legion, always a good sounding board of true Americanism, has approved our present foreign policy. The Legion, always strenuously opposed to communism in any form, has endorsed our aid to Russia

for so long as that country is fighting the common enemy of democracy and all that is best in civilization. With the Legion first things come first. The evils of communism will be met when, as, and where they appear. Said my favorite Irish poet, Thomas Moore:

"Shall I ask the brave soldier who fights by my side
In the cause of mankind, if our creeds agree?"

WE ARE UNDER ATTACK

Critics of our foreign policy love to quote, in part, another plank in the 1940 platform. They usually leave out the limiting final clause, "in case of attack." The paragraph reads:

"We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas, except in case of attack."

These critics say that determination to protect, by force where necessary, our American merchantmen, our naval vessels, and American citizens aboard these vessels when sailing the high seas violates the President's pledge. They have peculiar notions of what does not constitute an attack.

When an American merchant ship, flying the American flag, with Old Glory painted in 20-foot length colors on both sides of the vessel, is torpedoed and sunk, and the American citizens aboard are set adrift in open boats, on rough seas, several hundred miles from shore, is that not an attack on American citizens?

When a Nazi submarine fires torpedoes at an American cruiser on the high seas is not that an attack?

It is not necessary to recite many other piratical acts on the seas which constitute attacks upon America, to any reasoning mind.

Shall we send these ships to sea unarmed, to be destroyed by lurking submarines or swift raiders? To do so would be both cruel and cowardly.

The neutrality law was enacted in the hope we could thereby stay out of danger. Hitler has destroyed that hope. Our course is clear. We must arm our merchantmen, and protect them further by our Navy. The alternative is to keep off the ocean and abandon the world to Hitler.

When one comes upon a rattlesnake coiled and ready to strike, is it wrong if we strike first? Let us not split hairs between defense and offense when we meet Hitler's snakes. They are out to kill.

OUR MONROE DOCTRINE

We elected a President on a platform which declared:

"We favor and shall rigorously enforce and defend the Monroe Doctrine."

During Monroe's administration the autocratic European powers comprising the Holy Alliance contemplated the overthrow of the new republics in Spanish America and the reestablishment therein of Spanish sovereignty. President Monroe, after consulting with Jefferson, John Quincy Adams, and Calhoun, embodied the conclusions of these deliberations in his annual message to Congress in 1823. This message is our Monroe Doctrine, since reasserted by Tyler, Polk, Buchanan, Grant, Cleveland, and Roosevelt, and otherwise approved by every President since Monroe.

Lest these European powers should attempt to establish autocratic monarchial systems of government in this hemisphere, Monroe's message warned:

"We owe it, therefore, to candor and to the amicable relations existing between the United States and those Powers to declare we should consider any attempt on their part to extend their system to any portion of this hemisphere, as dangerous to our peace and safety."

Of existing republics in this hemisphere, Monroe added:

"We could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power, in any other light than as a manifestation of an unfriendly disposition toward the United States."

For 117 years we have refused to permit violation of the Monroe Doctrine. We have recognized that any violation would constitute an attack on our own security and safety. Must we wait until powerful Nazi forces, capable of waging actual and economic war upon us, have gained influence or control from Mexico to Paraguay before our somnolent isolationists will consider we are under attack? Certainly not.

To do so would imperil our own democracy. Eternal vigilance is still the price of liberty, notwithstanding the lucubrations of some of our more gloomy isolationists. Their arguments for appeasement get little favorable response in America, although they are reported with satisfaction in Berlin newspapers and serve to assure Hitler we are so divided that he need fear nothing from us. Hitler, thus deceived, is doomed to a rude awakening.

CAPITAL AND LABOR

We have in America some few labor leaders who think the fight against the Nazis is not important to American wage earners.

Where are the Italian, German, French, Belgian, Dutch, Danish, Norwegian, and Eastern European labor leaders of a few years ago? In graves, in prisons, in hiding. A few survive. Some have sold their independence for a mess of pottage, and now serve as labor taskmasters in nations under Nazi and Fascist control.

Where are the labor unions of these countries? Wiped out, outlawed. They do not exist. The Nazi-controlled governments fix the workers' hours of work, their wages; forces, grants, or denies their right to change the character of work, or the places where they may work. This slavery is not imposed merely through the necessities of war. It is part of the philosophy of nazi-ism, and war is the weapon by which this system is to be cemented and made permanent.

And where are the great captains of industry and principal owners of the giant corporations of industrial Germany? These men who, in their folly, financed and built up Hitler until he and his fellow racketeers destroyed free labor. They, too, have been crushed, despoiled, and rendered impotent by the Frankenstein of their own creation. Some few managed to escape from their native land. Here in America we have some industrial Fascists seemingly willing to travel the same road to their own economic death.

WHAT NAZI-ISM MEANS

Let labor consider Norway. There real democracy had reached almost perfection. Her people enjoyed every privilege and immunity set forth in the Bill of Rights in our own Federal and State constitutions. Capital and labor worked in harmony. It was a happy land. Then came the Nazi spies, the "fifth column" followed, seduced by bribe money; and finally the Nazi Army. Why did these emissaries of the devil come to Norway? They came to despoil that nation, to destroy a democracy that belied the Fascist-Nazi charge that "democracies are outmoded"; and they came to secure naval and military bases from which they hoped to destroy Britain, where capital and labor fight side by side.

In Norway the Nazi military power took control of the churches, muzzled its religious leaders, abolished teachers' organizations, disbanded the Boy Scouts of Norway, commandeered food, smothered labor organizations, restricted the food allotted to labor. They sent to the firing squads or to long imprisonment the few courageous labor leaders who protested against the steadily worsening conditions under which labor exists in that all but ruined country. And now, with the approach of winter, they seize the blankets from beds in Norwegian homes in order to warm the Nazi Army fighting Russia.

If ever there was a cause to which labor—leaders and rank and file—should give every support within their power, that cause is the defeat of Hitler, and all for which he stands.

RELIGIOUS PERSECUTION UNDER HITLER

To his other major crimes Hitler now adds the infamy of hypocrisy. His original deception was to lead the youth of his people to revere the pagan gods of Germanic and Norse mythology; he next appealed to the early tribal god of ancient Israel, the while persecuting the Jews; now he pretends that his assault on Russia is a holy crusade to save religion.

Let those who fear the religious ignorance of Russia fear rather the intelligence and military force of the Nazi oppressors of those who have faith in God. Let them not forget the fate of the Reverend Niemoller and his associates who sought only to preach in accordance with the creed of the Lutheran Church. Let them not forget the letter of Pope Pius in 1937 to the people of Germany wherein he stated that religious freedom in that unhappy country was beset on all sides; and "intrigues had been laid bare which aim at nothing less than a war of extermination." On Christmas Eve of 1937 Pope Pius declared "We will call things by their real names. In Germany there is a real religious persecution. A persecution so terrible and so grave as has rarely been seen before. A persecution in which are lacking neither brutality nor violence nor the snares of falsehood and lies."

In his persecution of the Jews living in Germany and in conquered territory now under Nazi control, words are inadequate to paint the horrors of rapine, starvation, humiliation, extermination, and robbery these unfortunates have suffered at the hands of Hitler and his tools. Through all his campaign for world dominion, this master gangster has sought to inculcate throughout the gentile population of the entire world a blind, unreasoning hatred of all Jews. Even here in America men are found who, in their desperation and declining influence, now seek to keep us divided by throwing into the arenas of public debate the twin evils of racial hatreds and religious intolerance. They will not succeed. Not in free America.

However, America does not condone past cruel persecutions against religion in Russia, even though religious teaching is now permitted there. But we do condemn as wholly without excuse or extenuating circumstances the like persecutions by Hitler and his followers and sympathizers who, one and all, acted and act with foreknowledge of true religion.

WHY HITLER MUST BE DEFEATED

We have adopted a foreign policy designed to best assure our own defense. The basis of our foreign policy, as urged by the President, and approved by Congress and the American people, is to aid, by every material means, and by moral and spiritual support, those who fight to preserve liberty and freedom, and to defeat Nazi and human slavery. To that end the Congress has appropriated billions. The American people will continue to support that program, accepting necessary burdens to the end that governments of the people, for the people, and by the people, shall not perish from the earth.

In support of this program, which we have adopted by reason and stern necessity, we are yet divided. We have in our midst secret spies and emissaries of Hitler. These must be and are being hunted out and driven from America, or incarcerated in our jails.

Unfortunately, we have some patriotic Americans who sincerely believe that Hitler

and Mussolini are mistaken when they say democracy and national socialism cannot coexist on this earth.

Some there are who imagine that Britain cannot win; that Hitler cannot be defeated by any or all of his opponents; that we should make peace with the Nazis before it is too late. Doubtless the democracies could now make peace with Hitler. He has begun to doubt the equivocation of the fiends whom he consults in his silent grotto at Berchtesgaden. A negotiated peace would be a Hitler peace, giving him time to lick his wounds and then renew his struggle for world domination. Time consumed in negotiations for such a peace would spell the doom of democracy. It would lull our own peace-loving people into false security, and a fatal slowing down of all our defense preparations. It would ruin the British who, in fighting for themselves, also fight for us.

Those who assert Hitler cannot be defeated speak as did the wealthy Tories who sneered at Washington and his ragged Continentals, as did the Vallandighams and the other copperheads of the War between the States, as do the Quislings, the Lavals, and cowardly traitors in every destroyed or threatened democracy of Europe.

All who oppose our foreign policy are entitled to be heard, and given respectful hearings. The cornerstones of our democracy are free speech, free press, and free religion. Even those who chisel at these foundations claim that protection.

DEMOCRACY WILL WIN AND SURVIVE

Let us keep faith. Democracy must, and will, win this war; democracy will survive the after effects of this war. When this cruel war is over, democracy will march on until it affords justice and equal opportunity for all and special privileges to none, and gives succor and aid to those unable to help themselves. It will make the ideals in our own Bill of Rights living realities in every nation which aspires to bring these blessings within its own borders.

Let us keep faith with our heroic forefathers, and preserve that for which they fought.

How To Find the Open Door of God

EXTENSION OF REMARKS
OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

Mr. LUDLOW. Mr. Speaker, Henry F. Schricker, our honored and esteemed Governor of Indiana, who is recognized by all who know him as typifying the very highest ideals of Christian citizenship, said in an address to the Indiana Methodist Conference at Indianapolis a few days ago:

The world is sick tonight because it has forgotten God. We grope around in the dark to find the answer to all these problems of ours and finally we find it in the open door of God. We are grateful tonight that the church bells still ring in our city. They have been silenced in many parts of the world. Democracy can only be saved by the spiritual strength of our people, and that spiritual life is needed today as it never has been needed before.

What solemn and arresting words these are, coming from the head of a great State!

In inspirational value they remind me of those powerful and appealing sentences of President Roosevelt a few years ago when he said:

No greater thing could come to our land today than a revival of the spirit of religion—a revival that would sweep through the homes of the Nation and stir the hearts of men and women of all faiths to a realization of their belief in God and their dedication to His will for themselves and for their world. I doubt if there is any problem—social, political, or economic—that would not melt before the fire of such a spiritual awakening.

The State of Indiana, among the least affected of all the States by the movement to high-pressure us into war, is ready, I am sure, to give its full faith and credence to the words of our Governor that the answer to the problems that are rocking the world is to be found not in the chancelleries of foreign powers where lurk the miasmas of hate, nor on the bloody battlefields where youths by the hundreds of thousands are tragically giving up their precious lives, but in the open door of God.

The challenge to the statesmanship of our time is to find the open door of God and lead humanity to it. It can be done. America can do it. America is the only power in the world that can do it. America can initiate a program of great moral and spiritual resurgence to lift the world out of hell, and sweep it back to safety and sanity.

Humanity right now is crying for America's leadership, not for war, but for peace.

In these terrific times, which seem to thinking persons to be the prelude to the destruction of civilization itself, there may still be hope for salvation if America will take the lead in bringing the world back to a realization of the divine order based on the fatherhood of God and the brotherhood of man. We can all help in that direction if we will rid our minds of war madness and open them to more wholesome thoughts—if we will quit concentrating our attention on how to thrust a bayonet into the belly of a brother and twist it around and will say to him, "Your burden seems to be heavy, what can I do to lighten it?" While rivers are running red in Europe and millions of young men—the flower of the world's manhood—are giving up their lives on the battlefields; while millions more of human beings are facing the agonies of starvation; while widows, wives, and children are crying their eyes out as a result of man's inhumanity to man, there still stands, as Governor Schricker says, the open door of God.

Is there anything we can do toward leading the world toward this open door and stopping the hellish and murderous activity that is sabotaging Christianity all around the globe? Is there anything we can do to substitute the motto which stands out over the portals of the United States Supreme Court, "Equal justice under law" for the jungle law of tooth and claw?

I believe there is. In my opinion America is in a position to save the world and by saving the world, to save itself. But it will never accomplish this monumental objective by becoming just one more belligerent. To achieve the purpose, American leadership must be exerted away from war and in the direction of peace.

I have my views of the modus operandi of achieving this objective of supreme humanitarianism in a world gone mad. As I am not a member of any committee or group or organization dealing with foreign affairs I can truthfully say that it is my own idea, lock, stock, and barrel; no one else is responsible in any degree for it.

I would have the President of the United States take the initiative for peace by proposing to the 21 American republics that the Western Hemisphere shall offer its services as a mediator to end World War No. 2, and to bring about a peaceful world order, based on fundamental justice.

I believe that such a move by our President, offering the cherished hope of a realization of the principles of post-war justice to which America stands committed, would have an immediate and electrical reaction throughout the world. Its instant effect, I think, would be so to weaken the grip of the brutal tyrants, Hitler and Mussolini, that they would lose control of their peoples. How does Hitler get his hold on the German people? He gets it by making them believe that Britain and America are combined to exterminate them; that they have their backs to the wall and must fight for their very lives.

Once the German people really know that America, faithful to its high traditions, has no other purpose than to perform in the role of good neighbor and to do its part to establish a world order in which all nations shall receive their just dues, the Hitler lie will be exploded, and Hitler will be on his way out. Hitler, of course, is atrocious, and is richly deserving of summary and condign punishment, but one cannot say that of the masses of the German people, who are his dupes. I do not question for a moment that a movement by our President to offer the services of the Western Hemisphere as a mediating agency would be hailed with joy by the people of Germany, Italy, and Japan, as well as Great Britain, for the people all around the world are weary of war. They are weary of its insufferable burdens, its griefs and heartaches, and the pain it puts in the hearts of mothers. Never before in humanity's history was there such an opportunity for the exercise of superlative statesmanship. It is my opinion that by taking the initiative in this proposed mediation movement our President would win the everlasting gratitude of the entire world by leading it out of its darkest night.

My mediation proposal was presented to the House in concrete form on February 27 last, and is embodied in House Concurrent Resolution No. 20, which is textually as follows:

Whereas it is the overwhelming desire of the American people that the United States shall remain at peace with the world and

free from foreign entanglements, while it faithfully performs its duties as a good neighbor; and

Whereas if the world ever needed a peacemaker, it needs one now; and

Whereas with war engulfing a large portion of the globe and threatening to draw other nations into its vortex, there is a real opportunity for the United States to demonstrate its sincerity as a good neighbor by assuming the role of a peacemaker; and

Whereas there is a possibility, faint though it may be, that the New World under the leadership of the United States might be the means of freeing the Old World from the miseries of war and reestablishing peace and tranquility on earth: Therefore be it

Resolved, etc., That it is the sense of the Congress of the United States that the President shall be requested to invite the American republics to send delegates to a conference to be held at the earliest practicable date in the city of Washington to offer to the nations now at war the services of the Western Hemisphere as a mediator, to the end that the blessings of peace may be brought to a distraught world.

SEC. 2. This concurrent resolution shall be known as the Peace Resolution of 1941.

In the existing war atmosphere it is not always easy to raise one's voice for peace. Misrepresentation is the order of the day and at best one is likely to be misunderstood. Years ago when I was valiantly leading a movement for a referendum on foreign wars a newspaper editorial took some of the tuck out of me by saying: "LUDLOW is leading a one-man fight against war." In these latter days, when sabers are rattling and warmongers are vociferous, it sometimes seems to me that I am trying to lead a one-man fight for peace.

But I am going to stick to my guns. It is time someone should speak in favor of the things that cure and heal, instead of the things that hurt and maim and destroy. The human spirit has progressed a long way upward through the night toward emancipation; as trustees of civilization we should not, we must not, permit all human values to be blotted out by war. The world needs to be healed, and it is time for America to turn the tide away from the phantasmagoria of hates and horrid dreams and the hell of war toward the goal of deliverance.

On this Western Hemisphere we have an object lesson of what nations can accomplish when they want to compose their differences; an object lesson which the Western Hemisphere might well present to the Old World with great sentimental effect in extending the helping hand of mediation. Away up among the snow-crowned Andes Mountains the face of Christ shines in the bright sunlight. To my imaginative mind, the heroic statue of the Prince of Peace, on the borderland between Chile and Argentina, sends out on the ether waves of love and friendship its mute appeal for the mediation resolution I have introduced. That statue is deeply rooted in the sentiment of the American republics, because it was erected by the two nations to celebrate an accord that was reached after long and intense bitterness. It stands in towering majesty on a spot 13,000 feet high. It can be seen for a hundred miles and all who come near it are enthralled by its beauty and grandeur. The story of the Christ of the Andes has been told many times, but to a world stricken with war, or living in constant fear of war, it cannot be told too often. The statue bears this inscription:

These mountains must crumble to dust before the Argentines and the Chileans shall break the peace which they have sworn to maintain at the feet of Christ, the Redeemer.

Would it not be a grand thing if the moving hand of history were to write into the record of civilization this memorandum:

In the year 1941 a great Christian President of the United States, with the assistance of the 21 American republics, brought a warring world to the feet of Christ, the Redeemer.

Is it not worth trying?

American Help to Russia

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, October 2, 1941

EDITORIAL BY JOHN P. LEWIS

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent editorial appearing in PM, written by Mr. John P. Lewis, under the caption "You don't have to love the Communists to help Russia stop the Nazis."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From PM of September 30, 1941]

YOU DON'T HAVE TO LOVE THE COMMUNISTS TO HELP RUSSIA STOP THE NAZIS

Since last June 22, when the Russians and the Germans went to war, there has been a lot of talk by a lot of people who feared that if the Communists won it would be just as bad for the world if the Fascists won. There developed quite a school of thought that the Communists and the Fascists should be allowed to fight it out and kill each other off. Then there would be no more communism and no more fascism and the goose would hang high for the democracies.

Which is a simple solution, but wars don't work that way. There are victors and there are losers. And nations don't kill each other off.

Recently, most of the news from the Russian lines has been bad. It has been clear for some time that the Russians alone could not stop the Germans where they were, much less win the war. The best the enemies of the Fascists have been able to hope for is that the Russians will continue strong enough to stop the drive some place on Russian soil and tie up a large part of the German Army in the east until Hitler's enemies in the west get squared away to lick him.

Now it is becoming clearer that Russia may not be able to hold the Germans without help—substantial help and immediate. It is clear now, even to those who most feared the consequences of a Soviet victory, that any nation that has been bled as the Russians have been bled isn't going to conquer the world. It is clear, too, that if Germany pushes the "red" army all the way over, no matter what the cost, the Fascists are going to be just that much harder to beat.

Stop for a minute and take a look at this war coldly and selfishly. Forget, for the time, the moral questions of right or wrong in our responsibility for helping the people who are helping us. Forget that men and women and children are dying at the hands of a madman. Forget that belly hunger has gripped a continent as the offspring of conquest. Forget the nights of terror, the days of oppression beyond the Atlantic. Forget that human beings again are in chains—slaves. Forget your humanitarian ideas, if you can. Don't listen to your conscience. Think only of self-interest.

Think brutally, if you will—laugh at the blood of others—but look at the facts, and still the news of the day cries out:

"Now is the time to give help—real help. Now throw everything we can throw into the fight to support Russia and put England in a position to strike."

To help the Communists or communism? Good God, no! To help ourselves.

Stop another minute and think about communism. When anyone starts talking frankly about the Communists, he is labeled by one side as a "red-baiter" and by the other side as a "red," but go on.

What does their form of government have to offer us? Well, we already have a form of government that has brought us a long way. Quite often we break out at the seams, and we have our problems, and our depressions, and our poor, and our hungry, and our oppressed, and our privileged. But we can stand up and say something about it, and do something about it—and raise hell and finally get things done the way we want them done. And that's more than a Communist dictator can give us.

We elect our public officers and if they don't do what we want, we can fire them. And that's more than the Communist can say.

You can go on and on like that, but you won't find anything that freemen can do that we can't do under democracy as well as or better than it can be done under communism.

But commmunism in this country hasn't been just an argument about government. Communism over here has been a lot of things, some good, some bad. The Communists are against racial intolerance and bigotry, and you can indict them for that. But you can indict them for their intolerance of any form of political thinking but the brand that is delivered straight from Russia. The Communists are opposed to fascism. But it was not until Hitler broke his defensive alliance with Russia by actual invasion of the Soviet Union that the Communists over here stopped fighting against our aid to the enemies of fascism.

You can go on down that road a long way, too; clear down to the argument that the Communists are great believers in free speech—but cancel it out because most of them are bores. You can toss that one out, but you can't toss out the fact that Communist policy over here is hand-tailored in Russia to the pattern of Russian needs, and isn't drawn up in this country to the pattern of American needs.

Now, what do these things, or all the indictments you care to pile up against the Communists, have to do with the question of our aid to the Soviet? Coldly, practically, selfishly—just exactly nothing.

Keep your selfish, cold-blooded approach—and what do we care what the Communists think and stand for if they are willing to die to stop the Fascists? Who are we to complain about who does the dying for us?

Is this the time to be choosy about our allies, at a point in history when fascism threatens to engulf the world and there are only two others on the globe standing be-

tween us and the Fascists—the Soviet Union and the British Empire?

Why should we refuse to send a gun to the Communist from Stalingrad with which to shoot our Nazi enemy, just because we don't like a street-corner orator in Peoria?

Regardless of his motive, we know that for every Communist who has the guts to stand up and fight and go down shooting at the Germans, that's just one less life of our own we're going to have to jeopardize to save our own country. If we're going to be cold-blooded about this war, let's be cold-blooded all the way and not kiss away the man who's carrying the gun for our side because we don't like the way he talks or the things he stands for.

JOHN P. LEWIS.

Dairymen Protest McNutt's Oleomargarine Regulations

EXTENSION OF REMARKS
OF
HON. MERLIN HULL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

LETTER FROM W. H. HATCHETT, CHAIRMAN, FOUR-STATE DAIRY PROTECTIVE COMMITTEE

Mr. HULL. Mr. Speaker, at La Crosse, Wis., on August 31, nearly 4,000 dairy farmers gathered at the Inter-State Fair grounds to protest the action of Government departments favoring the oleomargarine makers and against the interests of the dairy farmers of the Northwest in particular. Those dairy farmers formed representative groups from the States of Minnesota, Iowa, Illinois, and Wisconsin. Many of them were present as representatives of the cooperative creameries which manufacture 60 percent of the butter produced in the States mentioned.

Strong resolutions were adopted condemning the new regulations for oleomargarine by the Federal Security Administration which are being so widely advertised by the oleo makers to promote their sales campaign. Equally strong were the protests of the dairymen over the free advertising by radio given such counterfeit butter by the Department of Agriculture on July 5.

That the farmers of the Northwest were and are thoroughly aroused over their situation is evident. At the very time when they are being appealed to to increase production of dairy products for national defense and aid to Britain comes this seeming hostility of two great Government departments to the butter producers in the form of boosting the consumption of oleomargarine instead of butter, of which there now is in storage more than 200,000,000 pounds awaiting a market.

The Four State Dairy Protection Committee is an organization of farmers and creamery cooperatives which called the meeting at the La Crosse fair grounds. Its headquarters are at Sparta, Wis. From its chairman, William H. Hanchett, a well-known Wisconsin dairyman long interested in protection of the dairy products from unfair competition, I have received the following letter, which I shall insert in the CONGRESSIONAL RECORD:

SPARTA, WIS., *September 22, 1941.*

Hon. MERLIN HULL,
Washington, D. C.

DEAR SIR: We are submitting herewith some very pertinent reasons why we think the dairy interests of the United States are entitled to a congressional investigation of the recent action of Paul V. McNutt of the Federal Security Administration, and also of a recent broadcast of the Consumers' Division of the United States Department of Agriculture. The actual results already taken place in the creamery branch of the dairy industry are graphically outlined in a recent broadcast by Mr. J. E. Leverich, president of the Western Wisconsin Creamery Association, over radio station WKBH, from which we quote as follows:

"What does this all add up to? My friends, it is the most effective plan for complete destruction of the dairy industry that could be devised by man if a deliberate attempt were made to wreck this great and important industry.

"This is the way the scheme is working: Farmer patrons are rapidly quitting creameries and taking their milk to condenseries and cheese factories because of the higher price for condensed milk and cheese which has been arbitrarily set by the Department of Agriculture. This will cause many creameries to close or face bankruptcy, and oleomargarine, made to look and taste like butter, according to the standards approved by Mr. McNutt's Federal Security Administration, and given free advertising by the United States Department of Agriculture, will take the place of the butter which has been produced by these closed creameries for the tables of America.

"When this emergency is over, England will have no further use for our condensed milk and cheese, and oleomargarine will have captured tomorrow's butter market. Our memories cannot be so short that we have forgotten the vast surpluses of dairy products which we recently had, and the low prices these surpluses caused, and the money taken from the farmers' milk checks to advertise dairy products in an attempt to increase our markets. If we had surpluses which caused low prices recently, and we all know we did, what will be the situation after the emergency, when oleomargarine has captured the butter market which now consumes 40 percent of our milk, and the creameries have all been wrecked? I have heard some farmers who are patrons of cheese factories and condenseries and fluid-milk markets say, 'Why should I worry about the butter market, my milk is not made into butter.' The answer to this is that butter always has been the gold standard or price basis of the entire dairy industry, and it will undoubtedly be so again.

"After the emergency there will be approximately twice as much milk as can be used by condenseries, cheese factories, and the fluid-milk market if our butter market is turned over to oleomargarine, lock, stock, and barrel, with free advertising thrown in. A 40- or 50-percent surplus means practically no market at all, and all dairy farmers will be in the same boat. The farmers' milk checks, no matter where they are, will undoubtedly even be smaller than they were in 1933, and the consuming public had not been encouraged to eat oleomargarine by your United States Department of Agriculture at that time. If I remember correctly, most farmers thought the price of milk was awful low then, and it seems to me that I remember something about milk strikes at that time also.

"Someone may say, 'Why worry about this; everyone knows butter is better than oleomargarine, and we can start our creameries and make butter again when necessary.' My answer to this is that we cannot start them fast enough to avoid catastrophe. It has taken 100 years to develop our creameries and butter market, and it will take years to start our creameries again and recapture our butter market. It will be hard for farmers to spare the cash to start their cooperative creameries again during the depression which is sure to follow the present boom period caused by the war. The mistakes being made at this time, if not corrected immediately, are almost sure to cause the cooperative farmer-owned creamery—one of the most American of all American institutions—to become a thing of the past."

It is our opinion that Mr. Leverich is right, and that the free and untruthful advertising of oleomargarine by the Consumers' Division of the Department of Agriculture, together with the new standards of oleomargarine approved by Paul V. McNutt and the poorly planned diversion of milk to cheese factories and condenseries, does constitute a perfect plan to wreck the dairy industry.

If this plan is carried through to completion, we are certain that the American people will not only blame those who actually supported the plan but will also hold responsible for the resulting ill health of the people and economic hardships caused by the substitution of oleomargarine for butter those public officials who do not now actively attempt to stop the plan before it is too late.

We believe that the situation is so serious that a Congressional investigation of the following points should be made at once:

Who prepared the McNutt standards?

What help, if any, did they receive from the oleomargarine industry?

Are any former employees of the Food and Drug Administration now employed by the oleomargarine industry or vice versa? If so, what influence did these people have on the standards?

Did any Government employees receive compensation from the oleomargarine industry for work well done?

Why should oleo be made in imitation of butter?

Why should oleo be given the right to use the natural color of butter?

If oleo is made to look and taste like butter, and is colored like butter, how can a person eating in a hotel or restaurant be sure that he is being served butter? Oleo must be colored differently or operators of public eating places will be forced by competition to defraud their customers by using oleo.

Why are the makers of oleo permitted a wide latitude in the fats they may use, while butter can be made only from butterfat? This latitude permits oleo manufacturers to vary the content of their product so as to use the cheapest fats at any time. Some of the fats they are permitted to use are undoubtedly poorer than others.

What prompted the Consumers' Council to advertise oleo?

Who wrote the radio program?

Why was it insinuated that oleo was equal to butter?

Why was it suggested that the housewife could save by using a cheaper product?

What influence did the oleo manufacturers have on the personnel of the Consumers' Council either through financial help or otherwise?

Were any of the employees of the Consumers' Council, who had anything to do with the advertising, Communists or Communist sympathizers? If so, ruining the dairy farmers who are the backbone of democracy would work nicely into their plans for the revolution.

This advertising was untruthful. Why did they do it?

Mr. Montgomery, of the Consumers' Council, sets up the claim that nothing in the

broadcast referred to was "in any respect untruthful." We are glad Mr. Montgomery made this claim in just these words. Let us make a study of that broadcast and point out to you the deceitful and untruthful inferences of that broadcast. He also states: "If it be called free advertising, then this same characterization could be given to all of the information on food products which this Division and other agencies of the Department are constantly giving to the public"—to the effect that southern cotton farmers have much at stake in the sale of oleomargarine, and that no attempt at persuasion or influence was made in the broadcast.

A study of the Consumers' Council broadcast of July 5 reveals to me quite definitely that it tried to convince American consumers that there is one essential difference between the two products, oleomargarine and butter, and the difference is price. In my opinion, they deliberately went out of their way to create a Nation-wide butter price consciousness by emphasizing present butter price trends with the words, "That's mighty important right now, with the price of butter what it is," and "It costs a lot of money for people like us who must watch our pennies," and "People are finding out they can save quite a bit of money by using margarine instead of butter." In my opinion, this broadcast not only attempted to make consumers butter-price conscious, but offers a scare to consumers in an effort to dissuade them from using butter. Is not this an attempt at persuasion and influence?

In this broadcast this Department compared butter and oleo on a comparable basis, otherwise, by pointing out that both are chiefly fat, that the new standards set an 80-percent minimum for oleo, comparable with butter, and that in either case fat is fuel and energy for the human body. In an effort to make the two identically comparable, they say they are "equally digestible" and "equally rich in fuel value." The Division further cites comparability of vitamin A content when vitamin A is synthetically added to oleomargarine. So the broadcast leads the consumer to believing that these products in every respect, other than price, are wholly comparable. I claim this is not true.

What are the facts? According to Dr. E. B. Hart, world famed biochemist at the University of Wisconsin:

"There lies in the constitution of the fats, either qualitatively or quantitatively, or both, an inherent nutritive difference which can be demonstrated with young growing animals. This difference is not a vitamin A, D, or E difference, but a difference in the chemical constitution of the fats. It is probably a difference in the constitution of the fatty acids of the saponifiable fraction, although it may be due to some unrecognized essential nutrient carried by the butterfat but not carried by the vegetable oils. The mammary gland has synthesized something special for which there is, at present, no substitute. The ingestion of this something is reflected in the growth rate, appearance, and eventually the reproductive cycle of young animals. Experimental data are at hand showing the superiority for growth in young animals of butterfat over such vegetable oils as corn oil, cottonseed oil, soybean oil, and coconut oil, although the known fat soluble vitamins, such as A, D, and E, were adequately provided.

"Even the influence of the kind of fat ingested in the early life of the animal is felt in the later reproduction cycle. The kind of fat sets the life of the animal either for sterility or reproduction. Young rats 20 days old and grown to maturity with the vegetable oils as the principal source of the fatty acids failed to reproduce, although vitamin E was present. With butterfat the story was different—here reproduction occurred. Such data should be important in the education of the public to the use of milk as secreted by the mammary gland and in sustaining legislation aimed at the prevention of the substitution of some vegetable oil for the natural milk fat."

The broadcast in question, in my opinion, is further untruthful when it gives the impression that the consumer gains all information about oleo by reading the label. I cite the following: "Then, we really can find out the facts by reading the labels?" I ask you, does anyone, by reading the label, gain a realization that the new standards permit so wide a latitude in the use of ingredients that he fully understands and appreciates the changeableness of the content of oleo? Certainly not. In the case of butter, the 80 percent is always butterfat. In the case of oleomargarine it may be all vegetable fat; it may be all animal fat; and the only restriction as to ratio, if both animal and vegetable fats are used, is that the balance of nine to one either way shall be maintained. Perhaps today it is mostly soy oil; perhaps yesterday's was mostly coconut oil; and nobody, except the manufacturer, will know what it will be tomorrow. He will determine that, on the basis of price, taking advantage of the lowest market which gives him an almost perfect selectivity of profits so long as he comes under the wire at 80 percent fat. Is there anything in the label that tells all with respect to that?

Had the broadcast given all the facts, not part of them; had it told of the lack of dependability of the content of oleo; and the program not urged, persuaded, and influenced, I might then agree that it was a factual exposition and not a bold piece of advertising. Because of this, it falls in the category of propaganda, not education.

Mr. Montgomery's letter indicates that he thinks the sale of oleomargarine means much to the welfare and wealth of the cotton farmers. Since they produce primarily for the sale of lint, since cotton oil is a by-product, since the percentage of cotton oil is small at best, and since the wide latitude of contents used in variable proportions leaves the cotton grower little to depend on, I submit that he has overemphasized the importance of oleo as a source of additional income to the cotton farmer.

I further call your attention to the fact that the margin of price difference is much wider between the compressor and the finished oleo than it is between the cost of cottonseed and the price of oil at the compressor.

Further, may I call your attention to the fact that oleo is sold as an imitation. Unless made in the image of butter, which is an accepted product that has come down through the ages, oleo would find it necessary at great cost to blaze new trails of consumer acceptance. Butter sells for what it is. Oleomargarine sells for what it isn't. Oleo is not made from positive sources of fat combined in fixed ratios. Butter is made from one fat—the milk fat from cows. With it, there is no problem of ratios.

Even in its lower price range, oleo's margin of profit is wide. The margin of profit in the case of butter is surprisingly low. The profit that accrues from the processing and selling of oleomargarine is retained in the hands of a few. What little profit accrues from butter is disseminated into the hands of many. The manufacture and sale of oleomargarine is concentrated. In the case of butter, it is widely decentralized.

Butter and the dairy industry contribute more than any other type of agriculture to the building of soil fertility, the retention of soil moisture, and in this way are mighty factors to the upbuilding of national security for the future.

Also the Department should bear in mind that the dairy-farm capital investment in this country exceeds the investment in any other type of agriculture in America. Not only are more men and more millions of dollars involved directly in the butter industry than in the oleomargarine industry, even though we were to assume that the consumption of the two products were equal, but also to a far greater degree are more millions of men and more millions of dollars involved indirectly in the production of butter than in the development and manufacture of oleo.

In conclusion, may I say that I fear the Consumers' Council, like other groups, has lost sight of the vast economic, social, and health implications involved in this question of substituting butter. We believe that all the facts should be assembled—all the truths should be brought forward. We believe it is wrong to continue propaganda for a commodity when, on one hand, so much health and welfare is at stake while on the other, so much profit is involved to be turned into the hands of a few.

Is it necessary to supply England with cheese and condensed milk in such quantities that the people of the United States cannot have adequate dairy products? What will the effect be on the dairy industry after the war if production is increased and consumption at home curtailed?

Has any adequate investigation been made to determine the amount of cheese, condensed milk, etc., that England actually needs? If England were paying for these products, instead of getting them through the lend-lease program, would she demand the quantities she is now demanding? Are Canada and New Zealand diverting their milk from butter to cheese and condensed milk in order to help England? What is the oleo situation in Canada? Are the Canadians being urged to eat oleo by their Government? Why not ship some more wheat to England and some oleo to spread on the bread made from the wheat? Germany is doing a fairly good job of fighting, and from all reports they are not living on cheese and condensed milk.

Very truly yours,

W. H. HANCHETT,
Chairman,
Four State Dairy Protective Committee.

Are We Going To Have a Miracle?

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

ARTICLE FROM LIBERTY MAGAZINE

Mr. ANGELL. Mr. Speaker, many of us who are greatly concerned over the ever-mounting Federal expenditures and the desire to prevent our official house from crashing on our heads are concerned over the apparent inability of the administration or the Congress to curtail nondefense expenditures.

Under leave heretofore granted, I call attention to an article appearing in Liberty of October 4, 1941, which is worthy of consideration in connection with our whole fiscal policy. The article is as follows:

[From Liberty of October 4, 1941]

ARE WE GOING TO HAVE A MIRACLE?

A miracle may happen. The Senate Finance Committee has passed a resolution demanding a reduction in nondefense spending. Of

course, that doesn't mean that the Congress is going to obey the demand. But maybe it will. Maybe the protests that you have read on this page and elsewhere will bear some fruit. Perhaps the clamor of the long-suffering public, outraged at the beastly spectacle of the squandermaniacs in Congress still groveling around the pork barrel, has at last made an impression. Only a few weeks ago we reminded these representatives of the people that they would soon be coming up for reelection. By that time the new taxes would be hurting their own constituents, and the probabilities were that they would be kicked out of office, as they well deserved.

At this writing they propose to raise $28,000,000 by an increased tax on your local telephone bills and another $8,000,000 by taxing your electric-light bulbs. It will be interesting to see what are the items in nondefense spending of which Congress deprives itself. As the tax base is broadened and more people have to pay taxes, there is going to be a greater watchfulness over the gentlemen in Congress who so buoyantly appropriate our money.

Already the tax structure in this country is fantastic. Let us look at a few examples. The Socony-Vacuum Oil Co. paid a sum in taxes that was equal to three and a half times the net earnings of the world operations of the company. How long do the taxgatherers in Washington think such a condition can continue? For every dollar in salary paid by the Socony Co., it paid to Federal, State, and municipal governments $1.59 in taxes. Read that again. Ponder on it. Ask yourself if that is a businesslike way to run the United States Government. The taxes of the Texas Co. increased about 115 percent in 10 years. That represented a payment of $4,279 per employee. Next year these figures are to be enormously increased.

One of the most extraordinary Alice-in-Wonderland examples of our taxation program is to be found in the New York Telephone Co. In 1940 this company paid in taxes $40,500,000. Read that over again. That means that the New York Telephone Co. paid a tax of $1.25 a month for each telephone in use. Incredible? No. These are facts, and here are more. The telephone company paid a tax of $20 a week for each one of its 40,000 employees. Read that again, and remember it represents taxes paid by this one company of $132,000 for each working day of the year.

We could cite other examples, from the automotive industry, the railroads, and other industries, but we shall confine ourselves to two. In 1940 the United States Steel Corporation paid in taxes $85,000,000. In that year the Government received in taxes 55 percent more from the steel company than in 1929, but the stockholders received 45 percent less. The stockholders actually averaged less than 1 percent a year for the last 10 years. The E. I. du Pont de Nemours & Co., Inc., paid in taxes last year an average of $1,090,385 a week. No wonder Walter S. Carpenter, Jr., president of the Du Pont Co., said, "It is of vital concern * * * to the general welfare of all industry and to the future well-being of the country as a whole that the law for raising revenues for the Government should be so designed as to avoid needless injury to our basic institutions."

It is idle to point out that all this has virtually closed the door to new industrial undertakings. Government oppression has almost throttled private enterprise. But now a worse condition is emerging. They have done what they said they would do. They have soaked the rich. They have soaked big business. It is not enough—not nearly enough. Now they are going to soak everybody except themselves—unless this miracle really comes to pass.

Our country is big enough and rich enough to pay our national-defense bills and still remain a going concern. Our people are sensible enough and patriotic enough to accept their burdens cheerfully and faithfully. But no country is big enough, rich enough, or patriotic enough to squander its resources, to throw away its money, to rob its citizens for the benefit of politicians, and to remain a sound and going concern. The madness has gone far enough. Even the Senate Finance Committee demands that a halt be called.

We have been saying the same thing for a long time. We have been demanding that the squandermaniacs take their hands out of the people's pockets. Perhaps the day of miracles is not over. Maybe the Congress is going to economize. God grant it be so. If not, the American people are going to get angry. When that happens, the squandermaniacs had better watch out.

Prayer for America

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

ARTICLE BY H. I. PHILLIPS

Mr. ANGELL. Mr. Speaker, while it is true our first duty in this great emergency confronting us and the world is the battle of production, that we may be successful in the fight to preserve our own democracy and our way of life and to give all aid possible to other nations engaged in a like struggle, we should not overlook in this great hour of trial the spiritual strength which should accompany such an effort if it is to be successful.

As a part of my remarks under leave heretofore granted I include an article by H. I. Phillips on the subject of prayer for America, which is worthy of careful consideration of us all. The article is as follows:

[From the Washington Post of September 27, 1941]

THE ONCE OVER

(By H. I. Phillips)

PRAYER FOR AMERICA

"A national patriotic prayer week has been proposed for November 17 to 23 for the guidance and help of America in the present crisis."—(News item.)

First of all, O Lord, make us realize fully that in any prayer we are making a supplication, not placing a rush order.

In this critical hour in our Nation's life, help us to the ways of strength and fortitude through the ability to see ourselves as You see us! Make it possible for us better to gird ourselves for whatever tests may lie ahead by the power of completely honest self-appraisal.

Rid us of petty impulses, the corroding curse of self-interest and the besetting sin of intolerance. Strengthen us for the task ahead by the ability to see how far we have strayed from the ways of our forefathers. Grant that there may be restored to us something of their burning faith.

May we be humble enough to know that, even as we don the cloak of righteousness and take the sword of the crusader, we are not without guilt. May we be helped by the realization that our ways have not made a pretty picture. May we become stronger through the knowledge that we have permitted the America we fight for now to become far too worshipful of the cheap and tawdry.

Make us realize that this is no hour for the casual mood or the superficial gesture. May we understand fully that this is no job in which cheers, back slappings, music, confetti hurling, and the usual trappings of everyday endeavors shall suffice us.

Grant us the wisdom to understand that in this crusade cheap publicity, personal glorification, and supercilious small talk are sickening and wholly unavailing.

Rid us, O Lord, of the sickening, softening concept that the most comfortable road is the best, that any view of life is enhanced by a seat in a limousine, and that success and eminence depend almost wholly on the spotlight and the cameramen.

Fill us with disgust at the countless evils we have nurtured in days of peace; the love of personal glory, the quest of false gods, the pursuit of the main chance, and the debasement of countless high ideals of traditional American life.

Help us to be brave without being boastful, indignant without being intolerant, resolute without being unfair. May we keep constantly in mind Thy commandment, "And the greatest of these is charity," charity in the sense of tolerance and compassion. Keep us strong, yet not truculent.

May we see the frothy things of our civilization and all the glittering superficialities for what they are and know again the capacity for disgust and chagrin. Make us understand that we are at the crossroads, that this may now be the hour of our destiny. We shall need all the elements of our character which easy living has sapped. Give us spiritual strength, restore our faith, clear our vision, grant us strength and the sustaining memories of our sturdy forefathers and their honest, God-fearing way of life in peace or war.

And, oh Lord, through Thy saving grace, make it possible for us to recover the old trail and follow it to the end of the passage with the words ever in our minds, "Yea, though I walk through the valley of the shadow of death, I will fear no evil, for Thou art with me; Thy rod and Thy staff they comfort me." Amen.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

Mr. LAMBERTSON. Mr. Speaker, we are doing everything under lend-lease for which there is no authority any other place.

Added to our newly created coordinators, liaison officers, and super supervisors, we now have synchronizers.

A signed postal card addressed to the House Appropriations Committee had only three words, "You spending fools."

The six-billion bill will be passed without dotting an "i" or crossing a "t" so British and Bolshevik morale would not be weakened.

England warns little Finland not to invade Russia. This is funny and pathetic. As for me, Finns, give 'em 'ell; and in turn I hope the bear eats up Adolf.

The bases we are building in the Mediterranean, Red Sea, and Persian Gulf are for the purpose of protecting mother at Sabetha, Kans. (a la Smedley Butler).

We are doing every day to our neutrality and the international law what the U. S. S. R. did to religion—the President to the contrary notwithstanding.

The A. P. quotes Howard O. Hunter, director of W. P. A. and promoter of David Lasser, as saying that their rolls will be increased thousands to care for the jobless made from defense priorities.

A huge rick of rare live oak logs was found recently while dredging in Brooklyn shipyards. Navy officers say they have been there over 100 years, probably concealed for security. Water preserves them.

The shortest distance between Topeka and Singapore west on my globe is 9,717 miles through Vancouver, Tokyo, and Manila. It is 10 miles farther through the North Pole, Russia, and China, but they are all our friends.

Mark Twain in the Mysterious Stranger showed more understanding than some later authors when he prophesied how future wars would start:

I can see a million years ahead, and this rule will never change in so many as half a dozen instances. The loud little handful, as usual, will shout for the war.

The pulpit will warily object at first. The great, big, dull bulk of the Nation will rub its sleepy eyes and try to make out why there should be a war, and will say, earnestly and indignantly, "It is unjust and dishonorable, and there is no necessity for it." Then the handful will shout louder.

A few fair men on the other side will argue and reason against the war with speech and pen, and at first will have a hearing and be applauded, but it will not last long. Those others will outshout them, and presently the antiwar audiences will thin out and lose popularity.

Before long you will see this curious thing: The speakers stoned from the platform and free speech strangled by hordes of furious men who in their secret hearts are still at one with those stoned speakers, as earlier, but do not dare to say so. And now the whole Nation, pulpit and all, will take up the war cry and shout itself hoarse, and mob any honest man who ventures to open his mouth. And presently such mouths will cease to open.

Next the statesmen will invent cheap lies, putting the blame upon the nation that is attacked, and every man will be glad of those conscience-soothing falsities, and will diligently study them, and thus he will, by and by, convince himself that the war is just, and will thank God for the better sleep he enjoys after this process of grotesque self-deception.

"Bloody Joe" Stalin—Disciple of Religious Tolerance

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, the Honorable Iosiph Dzhugashvili, alias Joseph Stalin, that great crusader for liberty in that great Christian democracy, Soviet Russia, undoubtedly was vastly surprised, perhaps greatly delighted, and possibly no little embarrassed, if not chagrined, by the discovery by the President of the United States that the Russian Constitution affords and protects the same religious liberties as the Constitution of the United States.

Mr. Roosevelt, at a press conference this week, sprung this one on the newspaper boys. He informed them that the Russian Constitution did grant the same religious liberties to all Russians and foreigners as does the Constitution of the United States, and Mr. Roosevelt's attitude was that this was a great discovery. It was. So great was the amazement of the press corps that some of the boys reeled and had to be helped out by their comrades into the open air.

It appears from Mr. Roosevelt's study of the Russian Constitution, with its "bill of rights," whatever that bill of rights may be, that the world has been in error in calling the Honorable Iosiph Dzhugashvili "Bloody Joe" Stalin. The gory purges in which all of the intelligentsia, the leading generals and strategists of the army, the leading scientists, engineers, and writers were "liquidated" by the thousands, together with their families, must all have been in the interest of religious liberty.

There is no question but that "Bloody Joe" was vastly surprised at the Roosevelt discovery. There can be no question that from one angle he will be delighted, because it will allow his borers-from-within in the United States to start boring harder than ever under a cloak of respectability thrown about them by the President of the United States when he declared the constitution of the U. S. S. R. to be similar in its religious tolerance to our own.

Undoubtedly "Bloody Joe" will be greatly embarrassed, if not chagrined, by Mr. Roosevelt's discovery at the same time that he is surprised and delighted. The bloody massacres of the hundreds of priests throughout Russia in the past; the wanton slaying of men and women belonging to religious orders; the utter and obscene desecration of the finest cathedrals in all Russia; the organization of education to teach the youth there is no God, and that the Soviet Government and its dictator are the objects of the supreme worship of the Russian people; the deliberately created famine in which 7,000,000 of men and women and children in the Ukraine were deliberately starved to a horrible death by the Honorable Joseph and his cohorts—all of these atrocities must have been somebody's mistake. They certainly are not in accord with those provisions of the Soviet Constitution which Mr. Roosevelt dug up this week, nor are they in accord with the character of a Christian democracy, which the propagandists of the New Deal administration are now attempting to drape about this godless dictatorship of the Russians.

A more amazing—and brazen—thing has not happened in the history of this Nation than this effort, in the light of the known and recent bloody massacres in Russia, to drape about that dreadful country and its terrible dictator a cloak of Christian respectability and tolerance.

It is one thing to give such military aid as may be necessary to the Russians while they are fighting Hitler's demoniac forces. It was something else a few months ago when the great advocate of liberty, "Bloody Joe" Stalin and this Christian democracy of Soviet Russia was raping poor, honorable little Finland. It was something else a few months ago when this great Christian leader, Joe Stalin, was driving a dagger in the back of Poland while she was facing overwhelming Nazi assaults.

I have said and I repeat that it is devoutly to be hoped that Hitler and his henchmen and Stalin and his henchmen will destroy each other in this fight.

It is something else again when the President of the United States, or any other responsible spokesman of the administration fires the opening gun in what undoubtedly will be a wave of propaganda to convince the American people that Stalin's unspeakable dictatorship is pervaded by sweetness, light and virtue, and that the philosophy of communism is acceptable to the citizens of this country.

The greatest menace to the future of America henceforth lies in the danger that propagandists will make the slimy, treacherous, anti-Christian, anti-American philosophy of communism popular or acceptable in this Nation.

It was a great disservice to this Nation when the President unlocked the door and opened the way for a wave of Soviet propaganda to be undertaken in this country by his amazing, incredible, defense of the Soviet dictatorship as one of religious tolerance and enlightenment.

The President or others may find in the Soviet Constitution some verbiage that might be tortured and twisted into meaning religious tolerance, but the Soviet Constitution means no more to the dictator, Joe Stalin, and it means no more to the Russian people, than the American Constitution will mean to us if this campaign of propaganda to popularize communism gets a foothold in this country.

Ten thousand Russian Soviet constitutions, every one written in the blood of the massacred men, women, and children who have been sacrificed to the insane fears and lust for power of Joe Stalin and his cohorts, could not wipe out for 1 hour the actual known record of satanic evil, obscene ungodliness, and filthy atheism which characterizes not only the dictators of Russia but their henchmen in the United States. Nine days before Joe Stalin made his pact with Adolf Hitler, Stalin's stooges inveigled some 400 outstanding intellectuals of the United States to sign a manifesto, in which clause No. 8 stated explicitly that Stalin in Russia had wiped out "the superstitions of old religion."

It is an insult to the intelligence of the American people for any individual, be he President or pants presser, seriously to contend for a moment that Soviet Russia is a nation of religious enlightenment and tolerance. It is a bloody, relentless, ruthless dictatorship. Its philosophy, spiritual and material, is anti-

American at every point, in every sentence, and in every word. Anything anybody may say or do in the future will not change those facts one iota.

The American people must now be more alert than ever against the insidious danger of communistic boring from within that will try—and might succeed—in wrecking the foundations of free government in the United States.

That danger must be guarded against at all hazards.

The Truth and Nothing But the Truth

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

EDITORIAL FROM THE NEW YORK DAILY MIRROR OF OCTOBER 2, 1941

Mr. MARTIN J. KENNEDY. Mr. Speaker, I recommend to the serious consideration of the House the following editorial, which, in my opinion, is most timely.

The editorial follows:

[From the New York Daily Mirror of October 2, 1941]

YOUR STAKE IN AP, INS, UP

The truth is the first casualty, the first prisoner of war.

Without the truth, there has never been, there can never be, freedom.

The people of America get more truth than any other people in the whole world—we get more truth from inside Germany and even from inside England than the people of either of those nations can get. And, for our ringside seat on all the world's news, we are indebted to three great American news-gathering agencies that hide their own great story behind the tiny initials: INS, UP, AP.

Those initials stand for International News Service, United Press, and Associated Press.

Compare ours with Europe's news agencies. Biggest of the British agencies is Reuter's—which must sacrifice some of its independence as "pay-off" for the preferential rates it enjoys throughout the Empire, and the revenue it gets by selling its service to the British Government. Smaller, but quite independent, is the Exchange Telegraph Service.

Now look at the other countries:

In Germany, the one-time more or less independent agencies like Ullstein and Wolff were smashed by Hitler as soon as he came to power. Now the only functioning agency is the "official" Deutsche Nachrichten Buro (DNB). In Germany, the prefix "official" means "probably a lie, always propaganda."

In France, there used to be a pretty good news agency called Havas, biggest in the world in personnel and facilities. It had good men who got the news.

But when their cables hit the central office, there the "official" viewpoint began to seep in. You see, Havas was alleged to be secretly subsidized by the French Government.

Today, Havas is openly the "official" news agency of the Vichy government. That means it ranks with the rank DNB.

And the Tass Agency in Russia is also "official"; only difference between Tass and DNB is the German outfit tells more skillful lies from a psychological standpoint.

And in Italy, Stefani is the "official" news service; it enjoys a monopoly, and it pays for the monopoly by issuing fakes that Mussolini O. K.'s or dictates.

A century ago, Napoleon said that he would rather face the opposition of two regiments of troops than the criticism of two hostile, honest, and fearless newspapers.

Stalin, Hitler, Mussolini, and Petain share Napoleon's respect for the power of the printed truth.

Today, you can get a pretty good idea of the price of truth by the price Hitler has put on the head of any man, woman, or child caught reading or circulating any of the 500 bootlegged news sheets that print the truth as it is smuggled in from the outside world. The penalty is death.

And, conversely, you can visualize the high regard people hold for the truth—after they are deprived of it—when you know that all over Europe people are risking death to hear or read the truth from the outside.

Every year we have a national newspaper week here in America. This year, the week extends from October 1 to 8.

All year, 365 days and nights, the press and the great arterial news services that feed the press work to bring the American people the truth.

The Mirror has worked extraordinarily hard to bring the whole truth and nothing but the truth to our readers—the Mirror is the only New York morning newspaper that prints news from all three great services—AP, INS, and UP.

Accuracy is enforced by competition among the American news agencies: Associated Press is a cooperative, nonprofit organization of member papers—and the membership includes papers with all shades of opinions. AP cannot afford to be partisan any more than UP or INS.

Accuracy is equal to enterprise in selling UP or INS to client papers; inaccuracy and partisanship mean lost clients and bankruptcy.

We know the American people face tremendous decisions during the coming months; we feel that the best way we can help make sure that these decisions will be wise decisions is to print as much truth as possible.

And from INS, UP, and AP we get the truth—so you get the truth.

Defensive Powers of the Executive

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

ADDRESS BY EDWARD H. FOLEY, JR.

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Edward H. Foley, Jr., general counsel for the Treasury Department, delivered before the municipal-law section, American Bar Association, sixty-fourth annual meeting, Indianapolis, Ind.:

Twenty-four years ago this month Charles Evans Hughes spoke before the annual convention of the American Bar Association at Saratoga Springs, on the subject, War Powers Under the Constitution. He concluded his address with this statement:

"It has been said that the Constitution marches. That is, there are certainly new applications of unchanged powers, and it is ascertained that in novel and complex situations, the old grants contain, in their general words and true significance needed and adequate authority. So, also, we have a fighting Constitution. We cannot at this time fail to appreciate the wisdom of the fathers, as under this charter, 130 years old—the Constitution of Washington—the people of the United States fight with the power of unity—as we fight for the freedom of our children and that hereafter the sword of autocrats may never threaten the world."[1]

In September 1941 as in September 1917 many free nations of the world have set themselves to the business of war; now, as then, to prevent a new generation of autocrats from extending a tyranny which threatens the survival of liberty.

The rapid extension of a power whose purpose and design is to suppress basic liberties everywhere cannot fail to compel the concern of our country. And now the situation has progressed, beyond the implication of threat against our national security and freedom, to actual attacks on American ships at sea.

The President in his radio broadcast of September 11, 1941, announced that he had taken the defensive measure of instructing the Navy to eliminate German and Italian raiders from sea areas vital to American defense, without waiting for those raiders to attack. This step invites our inquiry into the basis of authority on which the President takes such action.

It is my purpose today to consider the way in which the Constitution provides for Presidential action in times of foreign crisis and to examine, in reference to past events, the practical interpretation which the fundamental law has received in this respect from its beginning.

I

It is necessary to keep in mind throughout our discussion the idea expressed by Hughes concerning the very nature of a constitution: that it is a statement of general principles enunciated and is not characterized by the specific and rather rigid quality of a body of rules aimed at dealing with a current situation and intended to be subject to frequent and speedy change. Chief Justice Marshall emphasized this in the brief words: "* * * we must never forget that it is a constitution we are expounding."[2]

A constitution is in any age conceived as having relative permanence and continuity without constant alteration. To be a vital force, it must be construed broadly with the changing circumstances of new events.

Section 1 of article II of the Constitution ordains: "The executive power shall be vested in a President of the United States of America." Other provisions of the same article confer on the President specific powers. And section 3 of the article commands the President to "take care that the laws be faithfully executed." It is with the first of these sources of Presidential power that we are here particularly concerned.

It was observed by Alexander Hamilton that the legislative powers granted to Congress and the judicial power conferred upon the Supreme and inferior Federal courts were carefully limited in scope, while to the President was given "executive power" without qualification.[3] Shortly after the Civil War, Senator

[1] (1917) XLII Reports of the American Bar Association, 248.

[2] *M'Culloch* v. *Maryland* ((U. S. 1819), 4 Wheat. 316, 407).

[3] Works of Alexander Hamilton (Lodge ed., 1885), vol. 4, pp. 140–143 (Letters of Pacificus).

Reverdy Johnson restated succinctly Hamilton's theory in these words:

"* * * In express terms the powers conferred upon the legislative department of the Government are stated to be only those that are delegated in the first article. In the second place, the powers conferred upon the Executive by the second article are, as stated in the very beginning of that article, 'the executive power' of the Government, without any detail of the subjects upon which such power is exerted, as in the case in relation to the legislative department. And, in the third article, relating to the judicial department, only such cases are submitted as are specially enumerated. With regard, then, to the legislative and judicial departments, the powers vested in them are to be found in the articles constituting them. With regard to the executive department, the question as to the extent of its power depends upon the fact whether the power in question in its nature is executive, and not restricted by some of the express guaranties or prohibitions in the Constitution." [4]

After leaving the Presidency, Theodore Roosevelt stated his view that the President was "a steward of the people bound actively and affirmatively to do all he could for the people * * *, whenever and in whatever manner was necessary, unless prevented by direct constitutional or legislative prohibition." [5] That position was strongly criticized by William Howard Taft in his book entitled "Our Chief Magistrate and His Powers." He said:

"The true view of the Executive functions is, as I conceive it, that the President can exercise no power which cannot be fairly and reasonably traced to some specific grant of power or justly implied and included within such express grant as proper and necessary to its exercise. Such specific grant must be either in the Federal Constitution or in an act of Congress passed in pursuance thereof." [6]

Taft added the comment that:

"Mr. Roosevelt, by way of illustrating his meaning as to the different usefulness of Presidents, divides the Presidents into two classes, and designates them as 'Lincoln Presidents' and 'Buchanan Presidents'. In order more fully to illustrate his division of Presidents on their merits, he places himself in the Lincoln class of Presidents, and me in the Buchanan class. The identification of Mr. Roosevelt with Mr. Lincoln might otherwise have escaped notice, because there are many differences between the two, presumably superficial, which would give the impartial student of history a different impression." [7]

Without passing on the merits of the controversy between Roosevelt and Taft, both of these distinguished statesmen would undoubtedly have agreed that the President is possessed of whatever executive power is lodged in the National Government by the Constitution.

The Supreme Court has declared that in the United States questions of external affairs are Federal, as well as executive. For example, in *The Chinese Exclusion Case* the Court said that—

"For local interests the several States of the Union exist, but for international purposes, embracing our relations with foreign powers, we are but one people, one nation, one power." [8]

It would seem that this was the view of the framers of the Constitution. In an address on the floor of the Constitutional Convention, Rufus King said of the several States:

"They did not possess the peculiar features of sovereignty, they could not make war, nor peace, nor alliances, nor treaties. Considering them as political beings, they were dumb, for they could not speak to any foreign sovereign whatever. They were deaf, for they could not hear any proposition from any such sovereign * * * *." [9]

In a series of lectures given at Columbia University before his appointment to the Supreme Court, George Sutherland analyzed the powers of the National Government. His conclusion also was that the powers of external sovereignty were never possessed by the States or by the people in the States separately. Speaking of the powers of the Federal Government over external affairs, he declared:

"These powers passed directly to the Nation as the result of successful revolution. They were never exercised, they were never possessed, by any government except the Government which, for the time being, represented the Nation. When the Constitution was framed, therefore, the undivided powers of external sovereignty were in the Union, which antedated the Constitution and was made more perfect by it." [10]

No one can now deny the supremacy of the Federal Government in the field of foreign relations. Confusion has sometimes arisen, however, in discussions of what branch or branches of the Federal Government is vested with this power.

II

As early as 1800, John Marshall, while a member of the House of Representatives, said that "The President is the sole organ of the Nation in its external relations, and its sole representative with foreign nations." [11] This was the exact position embraced by the Supreme Court in recent years, when Mr. Justice Sutherland, speaking for the Court in Curtiss-Wright Export Corporation versus United States stated:

"It is important to bear in mind that we are here dealing not alone with an authority vested in the President by an exertion of legislative power, but with such an authority plus the very delicate, plenary and exclusive power of the President as the sole organ of the Federal Government in the field of international relations—a power which does not require a basis for its exercise an act of Congress, but, which, of course, like every other governmental power, must be exercised in subordination to the applicable provisions of the Constitution." [12]

It is well established that the President has plenary power over the recognition of foreign states and the severance of diplomatic relations.

The question of recognition arose early in the administration of President Monroe concerning the revolted Spanish colonies of Latin America. Henry Clay, in the House of Representatives, attempted, by moving the addition of a rider to an appropriation bill, to intrude congressional control into the matter; his motion was twice defeated, the opposition maintaining the executive character of the foreign relations power. [13]

Again, in 1896 the Senate Foreign Relations Committee recommended adoption of a resolution recognizing the independence of Cuba from Spain. [14] President Cleveland believed that recognition would be premature, and that this method challenged his constitutional power. Secretary of State Olney communicated the President's view to the Senate committee, accompanied by a supporting opinion of the Attorney General. The committee then receded from its original position. [15]

A resolution introduced by Senator Fall, of New Mexico, in 1919, directed at breaking off relations with the Mexican Government of Carranza, likewise failed when President Wilson expressed vigorously his opposition on constitutional grounds. [16]

III

The President's control over foreign relations may, for practical purposes, involve the United States in war. This is shown clearly by such familiar incidents as the dispute in 1895 with Great Britain over the boundary with Venezuela and British Guiana. [17]

It has been urged that the vesting of Congress with the authority to declare war amounts to a denial by the Constitution of the President's power to act decisively in a situation like that of the Venezuela controversy. Reference to the proceedings of the Constitutional Convention on this clause of the instrument will, however, dispel all reasonable doubts.

As the war clause of the Constitution was reported to the Convention by the committee of detail, the power to "make war" was lodged with the "Legislature of the United States." Pierce Butler, of South Carolina, proposed that the committee provision be changed to vest the war-making power in the President,

[17] In his annual message to the Congress in 1895 President Cleveland reaffirmed the applicability of the Monroe Doctrine and recommended an appropriation for the expenses of a commission to investigate the boundary dispute. He stated further:

"When such report is made and accepted, it will, in my opinion, be the duty of the United States to resist by every means in its power, as a willful aggression upon its rights and interests, the appropriation by Great Britain of any lands or the exercise of governmental jurisdiction over any territory which after investigation we have determined of right belongs to Venezuela." Richardson, Messages and Papers of the Presidents (1897), vol. IX, p. 655.

who would have all the requisite qualities and would not make war but when the Nation would support it. Madison and Gerry then moved to substitute in the committee provision "declare" for "make" war, "leaving to the Executive the power to repel sudden attacks." This amendment was then agreed to by the Convention.[18]

It is plain from this that the President may engage American forces in hostilities, in case of attack, without any authorization from Congress. It may be asked: Who shall determine when an attack has been made on the United States by a foreign power? I suggest that the answer is: The President, as the sole organ of the Nation in external affairs. The members of the Constitutional Convention were well aware of the weakness and indecision of the Government of the United States under the Articles of Confederation in matters of international policy.[19] It could only have been their intention to confer on the Chief Executive power to undertake quick and decisive action where that is demanded by the press of circumstances abroad.

Our Presidents in the past have subscribed to the theory that they were constitutionally authorized by a grant of "executive power" to deal fully with foreign countries, using their authority as military commanders to support their external policy where necessary.

An early incident is Gen. Andrew Jackson's campaign in Florida against the Seminole Indians. The War Department had commissioned Jackson to end the raids, authorizing him to cross the border if necessary.

On the basis of this authority, Jackson proceeded into Florida, seized St. Marks and Pensacola, tried and executed two British subjects accused of inciting the Indians, established the revenue laws of the United States for this territory, and set up a military regime in place of the Spanish Government. The Spanish Government protested the American action and demanded indemnity.[20]

John Quincy Adams, then Secretary of State in the administration of President Monroe, in his instructions to the United States minister concerning this protest, justified the action on the ground that "it arose from incidents which occurred in the prosecution of the war against the Indians, from the imminent danger in which the Fort of St. Marks was of being seized by the Indians themselves, and from the manifestations of hostility to the United States by the commandant of St. Marks and the governor of Pensacola, the proofs of which were made known to General Jackson, and compelled him, from the necessities of self-defense, to the steps of which the Spanish Government complains." [21]

An additional case occurred after President Tyler had negotiated in 1844 a treaty of annexation with the Republic of Texas. The Texas commissioners were assured that after signature of the treaty and pending its ratification the President would employ all means in his power to protect Texas against any foreign aggression.[22] In the next year President Polk ordered Gen. Zachary Taylor to prepare for embarkation from a United States port for the Texas frontier, and in early 1846 his troops reached the Rio Grande. A month later some Mexican cavalry attacked the American forces, and hostilities began.

The Senate had never ratified the annexation treaty with its attendant understandings, and Congress had only approved annexation by a joint resolution, without ever having authorized a Mexican war.[24] Later the Supreme Court said in the prize cases:

"The battles of Palo Alto and Resaca de la Palma had been fought before the passage of the act of Congress of May 13, 1846, which recognized 'a state of war as existing by the act of the Republic of Mexico.' This act not only provided for the future prosecution of the war, but was itself a vindication and ratification of the act of the President in accepting the challenge without a previous formal declaration of war by Congress." [24]

Again in 1871, President Grant submitted to the Senate a treaty for annexation of the Dominican Republic. While ratification was being considered, the Government of Haiti was overthrown by General Saget, who was known to be friendly with the Dominican insurgent, Cabral. For the protection of the government of the Dominican Republic, President Grant arranged for the dispatch of a naval force to Santo Domingo to inform the Haitian general that any interference in Dominican affairs would be regarded by the United States as a hostile act and to protect with force the Dominican Republic against any attack.[25] This armed protection was continued by Grant for more than a year and was the center of bitter senatorial debate. Senator Sumner introduced a resolution of censure. After a heated debate extending over 2 days and marked by opposing speeches of Senators Sumner and Harlan, the resolution was tabled and the President's action was thereby sustained.[26]

In the early years of World War I, repeated revolutionary disorders in both republics on the island of Santo Domingo provoked the fear by our Government that these strategically situated places in the Caribbean would fall prey to the influence of a European power such as Germany, and form the base for future expeditions against the vital Panama Canal. As a result, President Wilson authorized the sending of occupying forces to restore order and government.[27]

And in 1914, when American relations with the Huerta government of Mexico had come to the breaking point, President Wilson gave instructions for the bombardment of Vera Cruz, when a German merchant ship was about to land munitions there which might be used against the United States by Huerta.[28]

IV

These instances of the Presidential exercise of the power to engage in active defense against a foreign country without awaiting action by Congress or an actual invasion of United States territorial sovereignty make it at once clear that recent American military occupations of Greenland and Iceland at the direction of the President are not unique and novel occurrences; rather, they are examples of renewed application by the President of his executive power to direct the external affairs of the United States, implemented by his power as Commander in Chief of the armed forces.

Our Presidents have repeatedly interpreted the Executive power as authorizing the armed protection from attack of territory in process of becoming a part of the United States as well as the actual protection of foreign states themselves. There are many instances of pursuit and hostilities in foreign territory with temporary occupation. No President has hesitated long to include in such protection potential American territory, even though it never was annexed. And they have not hesitated to take active measures in foreign territory where the local situation threatened, in their judgment, to jeopardize American national defense.

Nor is this the limit of Executive action in matters of international affairs. Traditionally, the Executive power has been exerted abroad to protect American interests generally. President Jefferson ordered the Navy to put an end to the piracy of Tripoli corsairs practiced on American ships in North African waters.[29] Tripoli had declared war on the United States, and Jefferson received no authorization from Congress to proceed until 2 years after his original instructions.[30] His position in issuing them was, nevertheless, sustained by Madison in a letter to President Monroe written in 1827.[31] And later the Supreme Court gave him unequivocal support in the Prize cases, saying:

---

[20] (1819) S. Doc. No. 100, 15th Cong., 2d sess.; Bailey, Diplomatic History of the American people (1940), 168–169; see letter from James Madison to James Monroe, September 22, 1827. Writings of James Madison (1865), vol. III, p. 588. It is possible that Jackson exceeded his authority in seizing the forts and in establishing the laws of the United States; however, he was clearly authorized to invade Spanish territory, and in instructions to the General, President Madison added:

"I am aware that cases may occur when the commanding general, acting on his own responsibility, may safely pass the limit * * * [of his orders] with essential advantage to his country." For instance: "The officers and troops of the neutral power forget * * * their neutral character; they stimulate the enemy to make war; they furnish * * * arms; * * * they take an active part in their favor * * *. The general * * * pursues them to their post, * * * attacks and carries it, and rests on those acts for his justification."

Such a justification may not in fact have been demonstrated, but it was consistently Jackson's position that all his acts were authorized by the instructions. See James, Andrew Jackson, the Border Captain (1933), 317.

[26] (1871) 98 CONGRESSIONAL GLOBE, 329. The resolution, which was tabled, read, in part, as follows:

"* * * the employment of the Navy without the authority of Congress in acts of hostility against a friendly foreign nation, or in belligerent intervention in the affairs of a foreign nation, is an infraction of the Constitution of the United States and a usurpation of power not conferred upon the President.

"* * * while the President, without any previous declaration of war by act of Congress, may defend the country against invasion by foreign enemies, he is not justified in exercising the same power in an outlying foreign island, which has not yet become part of the United States; that a title under an unratified treaty is at most inchoate and contingent, while it is created by the President alone, in which respect it differs from any such title created by act of Congress; and since it is created by the President alone, without the support of law, whether in legislation or a ratified treaty, the employment of the Navy in the maintenance of the Government there is without any excuse of national defense, and also without any excuse of a previous declaration of war by Congress" (1871), 98 CONGRESSIONAL GLOBE 294.

[31] Letter from James Madison to James Monroe, November 16, 1827. Writings of James Madison (1865), vol. III, p. 599.

"If a war be made by invasion of a foreign nation, the President is not only authorized but bound to resist force by force. He does not initiate the war, but is bound to accept the challenge without waiting for any special legislative authority." [32]

In the early 1850's the United States disputed with the British Government the latter's designs on the Mosquito coast of Central America as a violation both of the Clayton-Bulwer Treaty and the Monroe Doctrine. The Government at Washington sent a warship to Greytown to protect American interests and the vessel's commander bombarded the town, destroying British and French property.[33] In a suit against him for damages arising out of the bombardment, the commander defended his action by relying on the authorization of the President and the Secretary of the Navy. Mr. Justice Nelson, sitting in the circuit court which heard the case, sustained Commander Hollins' position, stating:

"Now, as it respects the interposition of the Executive abroad, for the protection of the lives or property of the citizen, the duty must, of necessity, rest in the discretion of the President. Acts of lawless violence, or of threatened violence to the citizen or his property, cannot be anticipated and provided for; and the protection, to be effectual or of any avail, may, not unfrequently, require the most prompt and decided action * * *." [34]

Taking action which foreshadowed present-day patrols and convoys, President Buchanan in 1857 dispatched a naval force to Cuban waters with directions "to protect all vessels of the United States on the high seas from search or detention by the vessels of war of any other nation." The step was taken in answer to the repeated action of British warships in boarding American merchantmen for visit and search in time of peace. Great Britain subsequently conceded the correctness in international law of the American position, and the incident was closed without any hostilities.[35]

Numerous other similar incidents could be recounted; as responsible writers on the present subject have stated—

"* * * the armed forces of the United States 'have been landed on foreign soil for the protection of the lives and property of American citizens abroad on more than 100 occasions.' From the Aegean Islands to Manchuria, and from Mexico to the Falklands.

"'American seamen and marines have been sent ashore to prevent by force of arms the injury of their countrymen wherever these have been endangered, or to exact reparation for wrongs committed against them. Sometimes the force employed has been only a dozen seamen in a cutter, who chased a piratical schooner ashore. * * * On other occasions American armies of more than 3,000 men have engaged in long campaigns with the people of foreign states, operations which must have been classified as wars if it were not for the fact that the Congress of the United States never recognized them as such by a formal exercise of its unique power to declare war.'" [36]

If the President, without previous congressional approval, may with full constitutional authority employ the armed forces of the Nation to protect private interests abroad, surely this power must extend to such action when taken to protect and defend the entire Nation. It is in this light that we must view the President's acts in acquiring, by agreement and occupation, sites for military bases throughout the Western Hemisphere, in ordering the Navy to clear the seas of Axis submarines and surface raiders, and in providing for all possible protection on the seas between the American Continent and Iceland for every merchant ship carrying cargoes to Great Britain. In taking these steps the President is making articulate the national policy of freedom of the seas and of opposition to the aggressor states.

The President himself has initial responsibility for determining questions of his constitutional power, and this is especially true in cases relating to foreign affairs over which he exercises a unique and virtually exclusive jurisdiction. There can be scant danger to democratic institutions from concentrating such an "executive power" in one Chief Magistrate who alone is responsible to the entire electorate for his use of this power.

All our history has shown that crises demand the purposeful and unfaltering action of a single individual, clothed with all the authority that our Constitution confers. Through all of our history we have been blessed with leaders, from Washington and Jefferson to Lincoln and Wilson, who have not hesitated to use that authority. They were not assailed by timid fears. They did not let themselves be hampered by narrow doubts. They acted with a boldness that measured up to the full height of their responsibilities to the people of their day.

Today we are living through times that would have tried men's souls in any of the great emergencies our country has encountered. We are in the midst of a crisis in which the survival of our free democratic institutions is at stake. This is no time for confusion or doubt or half-way measures. As the President said on September 11, "The American people have faced other great crises in their history with American courage, with American resolution. They will do no less today." The people have a right to expect the full exercise of Presidential power which springs from the Constitution, which has been tested and proved for 150 years. I am confident that they will get the courageous leadership now which will again enable this Nation successfully to defend its freedom.

They're Building Ships in Oregon

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

EDITORIAL FROM THE PORTLAND (OREG.) JOURNAL

Mr. ANGELL. Mr. Speaker, I am proud of the shipbuilding program in my native State of Oregon. In the last war we earned an enviable reputation in the construction of ships for use in the prosecution of the war, and we are keeping up with the record we then established in carrying forward at the present time our defense program.

I include as part of my remarks an editorial appearing in the Journal, published at Portland, Oreg., September 21, 1941, calling attention to some of these accomplishments. The editorial follows:

[From the Portland (Oreg.) Journal of September 21, 1941]

THEY'RE BUILDING SHIPS IN OREGON

Oregon is helping write the history of the second World War—writing it in ships—ships for the United States Navy, ships for the maritime commission, and ships for Britain.

Six Oregon companies, employing about 12,000 men at the moment and putting them on at the rate of at least 100 a day, are busy on $125,000,000 worth of ships. They're building minelayers, minesweepers, net tenders, and sub chasers for the Navy, and they're building part of the great "Liberty fleet" of merchant ships, as well as doing conversion jobs that are as big and as important as building entirely new vessels.

The speed with which crews and materials have been assembled is amazing, almost unbelievable. Ask shipyard executives how, and they'll tell you they themselves don't know. Great yards have bloomed into being almost overnight. Where, 10 months ago, there were only swamps, woodyards, and unsightly waterfront junk, great buildings and shipways now stand, and great ships take form.

Half a dozen conversion jobs and naval vessels have already been delivered by Commercial Iron, and Willamette Iron & Steel. And Oregon Shipbuilding, biggest of them all, has 8 ships on the ways, will launch the *Star of Oregon*, first of 43 vessels costing $75,000,000, September 27. Last February this company had some plans. Now it has more than 7,000 men at work, and they're turning out ships at the rate of 1 every 2 weeks. Before long, they'll launch 1 ship a week.

Willamette Iron & Steel, busy on two great minelayers costing $12,500,000 each, has already converted two ships and is busy on the *President Jackson*, and, as a sort of sideline, is building 50 great steam engines for the Maritime Commission.

Commercial Iron has finished four net tenders, has seven minesweepers coming.

Every shipyard in Oregon, including those at Astoria and North Bend, has been doing the impossible—starting from scratch, training men, beating time schedules, delivering ships—ships that will help win a war. That's because every hunk of steel put in place by a whirley crane, every riveter's tattoo, and the hiss of every welder, is a blow at Hitler.

Uncle Sam wants ships, does he? Okay; Oregon will give him ships.

Harry Bridges

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

ARTICLE FROM THE WASHINGTON POST

Mr. ANDERSON of California. Mr. Speaker, I am sure that most of the Members of Congress are gratified over

the fact that Judge Charles B. Sears has recommended the deportation of Harry Bridges. From all that can be ascertained, Judge Sears made his recommendation after a careful investigation and review of approximately the same evidence that was submitted to Dean Landis 2 years ago. Apparently Landis would not recognize a Communist even if it crawled in bed with him. I join with many of my colleagues in expressing the hope that legal technicalities will not long stand in the way of the speedy deportation of an extremely undesirable alien.

In connection with this case, I wish to call your attention to a timely editorial from a recent edition of the Washington Post. All of us should give particular attention to the advice contained in the editorial that Congress should take note of Judge Sears' forthright finding on the aims of the Communist Party in the United States. The sooner the Stalin political conspiracy in this country is uprooted and eradicated, the better for the future security of our democracy.

The article follows:

[From the Washington Post]

CASE OF MR. BRIDGES

The Government's handling of the case of Harry Bridges certainly leaves much to be desired. After an elaborate hearing before James M. Landis, acting as a special examiner for the Labor Department, Mr. Bridges was found not to be a Communist 2 years ago. Now Judge Charles B. Sears, acting in a similar capacity for the Department of Justice, recommends deportation of the labor leader on the ground that he has been affiliated with the Communist Party and various allied organizations. To say the least, this apparent contradiction tends to shake one's confidence in the quality of justice that is meted out to aliens who run afoul of the law in this country.

It appears, however, that the findings of Judge Sears are more comprehensive and realistic than those of Dean Landis. Moreover, Congress has strengthened the law governing the deportation of aliens engaged in subversive activities since the previous hearing was conducted. Of equal importance is the fact that the public and some Government officials have learned a good deal about the Communist Party and its methods of operation in this country during the last 2 years. The Hitler-Stalin pact put the party-liners who were masquerading as American liberals to a test they could not meet. So Judge Sears probably faced a less difficult task than Dean Landis in addition to having a larger fund of evidence gathered by the F. B. I.

The only reasonable course for the Department of Justice is to act on Judge Sears' recommendations. If Mr. Bridges ultimately appeals to the courts, the case should bring much needed clarification of the law governing the rights of aliens who are associated with subversive organizations. Incidentally, Congress should take note of this forthright finding that "the Communist Party of the United States of America, from the time of its inception in 1919 to the present time, is an organization that believes in, advises, advocates, and teaches the overthrow by force and violence of the Government of the United States." If this is true, communism in this country is not just another political cause, but a conspiracy against the Nation. Obviously, no such conspiracy should be allowed to flourish because of any mistaken belief that to uproot it would be illiberal.

Real Badge of Honor

EXTENSION OF REMARKS

OF

HON. THOMAS ROLPH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

EDITORIAL FROM THE SAN FRANCISCO CALL-BULLETIN

Mr. ROLPH. Mr. Speaker, under leave to revise and extend my remarks I include the following editorial captioned "Real badge of honor," appearing in the San Francisco Call-Bulletin, September 29, 1941.

Mr. Speaker, in a few weeks, many young men will be returning to their homes, carrying honorable discharges from the United States Army, and showing they have served the Nation under the Selective Service Act.

The San Francisco Call-Bulletin suggests these men be accorded some inexpensive badge, which may be worn on the coat lapel, and which will not only be prized by the young men themselves, but will be a special badge of distinction.

The article follows:

[From the San Francisco Call-Bulletin of September 29, 1941]

REAL BADGE OF HONOR—UNCLE SAM'S GRADUATE SERVICE MEN DESERVE DISTINCTIVE EMBLEM

This is a salute to the largest and most important graduating class of 1941.

The class has 200,000 members and its uniform is not the cap and gown but the O. D. and overseas cap of the United States Army.

It is a class of veterans—young veterans, younger than most of us, but older than the majority of their fellows.

Between now and Christmas, these 200,000 members of the "Selective Service Class of '41" will have been released from the Army—without sheepskins, without magna cum laude, without degrees or any demonstrable award.

These veterans of '41 were ready, in varying degrees, to serve their country when they were chosen by lot in the Nation's first peacetime conscription.

As post-graduates, they will be ready, for the next 10 years, to be called back into active service at any time their country may need them.

MONEY WELL SPENT

The fact that they have been trained for a year, or the better part of a year, forms a very formidable and reassuring part of the Nation's future defense preparation.

They have given the Government a definite return for the effort and money expended in their training.

They should have something to show for it, too.

On behalf of the 21,200 "graduating" selectees to be released from service before the first of the year on the west coast, and their brothers throughout the country the Call-Bulletin herewith proposes some tangible form of recognition be given these men.

The Call-Bulletin respectfully suggests to the War Department, to the Selective Service Administration, and the Congress of the United States that some suitable emblem be authorized, designed, and produced for presentation to every selectee honorably completing his selective-service term.

WOULD THEY WEAR IT?

The emblem could be in the form of a small badge, a bronze button, or a lapel ribbon for wear on civilian clothes. Its significance is more important than its shape.

Would the ex-selectees wear it? Would it be appreciated?

We think they would and it would.

We think so because we asked some of the boys about it.

"You'd be surprised what it would mean to most of us," said a recent "graduate" who volunteered before his number was drawn.

"It would mean that we could walk down the street past fellows in uniform without wondering what they think about the fact we aren't there, too. After all, we've been there.

"Not all of us old fellows over 28 look too old to be packing a gun—particularly after a year of getting into condition.

"Besides, don't believe all you hear about low morale. The number of grousers and beefers has been exaggerated. Nine out of ten of the men I've met in the service would be proud to wear such an emblem if the Government gave it to them."

STRONG COMMON BOND

Such an emblem, also would help to carry into civilian life the sort of camaraderie which springs up among men of all walks of life in a draft army.

The group is not so tightly knit, true, as among veterans of overseas service, but there is a strong and definite common bond.

As one general at Fort Ord once told the men:

"You belong to a club that doesn't take a dollar to join, but in which membership cannot be bought for any amount of money."

We think Uncle Sam owes them some sort of a club pin.

It's the least he can do for them.

And such an award to the grads certainly would not hurt the morale of the newcomers—the 600,000 incoming freshmen which the Army expects to induct by next June 30.

Fight on Gestapo Launched by Catholic Bishop in Germany

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

ARTICLE FROM THE WASHINGTON EVENING STAR

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of September 29, 1941:

[From the Washington Evening Star of September 29, 1941]

FIGHT ON GESTAPO LAUNCHED BY CATHOLIC BISHOP IN GERMANY—PROTEST ON PERSECUTIONS SENT TO NAZI LEADERS, INCLUDING HITLER

SOMEWHERE IN EUROPE, September 29.—The Roman Catholic Church once again has collided head on with the S. S. (Hitler Elite

Guard) and the Gestapo in the conflict which may develop into a show-down in the Reich.

It must immediately be emphasized that the dispute involves no church pronouncement on Nazi foreign policy or the war with Russia and England, but is confined exclusively to internal affairs. It has the most far-reaching implications, however.

Continued persecutions of church institutions form the background. Convents, monasteries, and schools have been closed and their membership scattered, and restrictions have been placed on religious festivals. The church, for a long time relatively silent, is now striking back.

The leader is Count von Galen, bishop of Muenster and representative of an old, aristocratic Westphalian family. Whether the movement stems from a joint decision of German church leaders or the individual determination of the bishop to accept martyrdom is unknown. It is believed hardly possible that he is acting without the sanction of his superiors.

BOMBING SEEN AS PUNISHMENT

A historical accident contributed to make Muenster the center of the outbreak. During the Thirty Years' War the city was threatened with destruction by fire, but saved by a fortuitous wind. The anniversary, celebrated annually with solemn religious festival, was banned this year. That night British bombers again fired the city. The devout saw this as divine punishment for failure to observe the rites.

Bishop Galen subsequently preached three powerful sermons and addressed personal protests to ranking members of the Nazi regime, including Hitler. Only Dr. Hans Heinrich Lammers, head of the Reich Chancellery, replied, saying merely that the protest had been referred to the "competent official"—Gestapo Chief Heinrich Himmler. The bishop returned to Dr. Lammers a full report on Gestapo and S. S. activities, insisting that they be called to account.

His first sermon on July 13 likewise dealt with Gestapo persecutions and mentioned the dread secret police by name. Its directness astounded listeners. The bishop noted the large part the church had played in the historical development of Germany and accused Himmler's organizations of disrupting the national community (the Volksgemeinschaft).

CHURCH EXISTENCE CALLED ISSUE

Bishop Galen drew heavily from the so-called Fuldaer, or pastoral letter, dated 1 week earlier, in which the German bishops without specific reference to the Nazis had said that forces in the Reich were again attacking the church. They had hoped, said the letter, that the "crusade" against Russia would mean a respite for German churches but "with great sorrow" they found this to be untrue. The issues involved, said the letter, included the very existence of the church.

"Recently," the letter continued, "a book has been prepared in hundreds of thousands of copies, which expresses the opinion that we Germans today must elect between Christ and the German Volk. With flaming indignation we German Catholics deny that any such choice is necessary. We love our German people and serve them, if necessary, to death. But at the same time we live and die for Christ and will remain bound to Him now and for all eternity."

Bishop Galen's second sermon, July 27, is reported to have been a beautifully worded, powerful elaboration on a similar theme, again mentioning names which few clergymen previously had dared.

"We Christians," said Bishop Galen, "are the anvil, the others are the hammer, and the anvil never yet gave out first."

KILLING OF INSANE ASSAILED

His third sermon, on August 3, opened one of the sorest spots in internal German affairs, the killing of the insane, hopelessly ill, and crippled. This practice, which first became known in the Reich years ago, apparently has no legal foundation beyond the theories of the most extreme party elements, and has at least the tacit approval of Hitler.

Bishop Galen cited the law against murder and the statute making guilty any persons knowing in advance of a crime and failing to report to the authorities. Reciting the number of persons taken away "the day before yesterday" in Westphalia, the Bishop said in effect:

"I am now reporting to the competent authorities that these people have been taken away with intent to dispose of them. I am jointly guilty if I fail in this duty."

Bishop Galen said the victims were determined by irresponsible groups, a practice which might lead to untold excesses. He argued that the German people would soon distrust their own doctors, a weapon which might be used to wipe out whole elements of the population. Most of the victims, he said, had relatives on the Russian front, fighting to preserve the nation.

"Where," he asked, "is our national community?"

SERMONS MIMEOGRAPHED

These sermons were mimeographed in thousands and circulated throughout the entire Reich, according to reports. Many have been sent in the army post to soldiers at the front, where they have been widely read. They have created a sensation unlike any similar occurrence within the Reich in years.

The bishop's stand was supported by a second pastoral letter which, in more moderate and general language, without names or references to the Nazis or Germany, condemned unauthorized killings of invalids and the insane.

The church so far appears to hold the temporary advantage.

Persecutions of church institutions are reported to have been halted early in August. Bishop Galen was at first officially urged to travel for his health, preferably outside the Reich. He replied that his health was good and that he required no vacation. He is now said to be under house arrest though otherwise unharmed to the amazement of parishioners in the rest of Germany.

This coincides with the new report that Dr. Martin Niemoeller is no longer in solitary confinement at Sachsenhausen, but has been transferred to Dachau, where he shares three cells with two Catholic priests, giving him the opportunity for the first time in 4 years to speak to others except during the rare visits of his wife.

Muenster, an ancient Hanseatic city, has long been the scene of religious turmoil. Bishop Galen's forebears played an active role. Bishop Benhard von Galen seized the city forcibly in 1661.

Missouri Asks for Construction of Table Rock and Bull Shoals Dams

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

RESOLUTION OF CITIZENS OF SOUTH MISSOURI AND NORTH ARKANSAS

Mr. ELLIS. Mr. Speaker, recently a large group of people, representative citizens of south Missouri, requested the immediate construction for the value of the defense program of Table Rock and Bull Shoals Dams on the main stem of the White River, one in Missouri and one in Arkansas. Together these projects will have an installed power production capacity of 330,000 kilowatts. I quote here the resolution asking for this construction:

Be it resolved, That this meeting composed of more than 5,000 adult citizens of South Missouri and North Arkansas assembled in the Ozarks region at Branson, Mo., on Lake Taneycomo, September 14, 1941, as follows:

First, that we heartily commend the Congress of the United States for the passage of the acts of 1936 and 1938 providing for complete surveys of the White River and its tributaries by the Army engineers; the authorization of the several projects contained in the latter act, and the President for his approval of both of said acts. We further commend the Army engineers for the faithful work performed by them in making such surveys.

Again we commend, and again we wish to express our deep appreciation to the Congress for the passage of the flood-control bill at the present session providing, among other things, for the installation of power facilities in the North Fork Dam and the construction of dual-purpose dams on White River at Bull Shoals in Arkansas and at Table Rock in Missouri. We are equally grateful to the President for his approval of said measure. Lastly, we pledge the Government the loyal support of the people of the Ozarks region in the furtherance of these several enterprises: Be it further

Resolved, That since there has long existed an inadequate supply of dependable power in the Ozarks region, and since the defense program requires vastly greater quantities of power than now available, we recommend to the President and the Congress provisions for the early construction of both Bull Shoals and Table Rock Dams as the best means of securing additional power in the four Ozarks States; be it further

Resolved, That a copy of this resolution be sent to the President, the Congress, and all agencies concerned in this important subject.

Adopted by a unanimous vote of those present and certified by:

REV. J. E. CHASE,
Chairman.

Attest:

EVELYN W. RUNYON,
Secretary.

The Lawyer's Duty

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

ADDRESS OF VERY REV. J. HUGH O'DONNELL, C. S. C., PRESIDENT OF THE UNIVERSITY OF NOTRE DAME

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Very Reverend J. Hugh O'Donnell, the eminent president of the University of Notre Dame, delivered at

the annual red mass of the Catholic Lawyers Guild of Brooklyn, on September 25, 1941, before a large congregation made up of jurists, attorneys, and civic officials. This annual event held by the lawyers' guild, which, I believe, is the largest group of lawyers in Brooklyn, has done much to strengthen the cordial relations existing among the various faiths there.

The address follows:

Occasionally an earnest but mentally earthbound reader of Genesis is brought up short by the account of the creation in which, you remember, there was light before the sun, the moon, and the stars were created. Here, surely, is a contradiction that must be extremely gratifying to the type of mind that delights in ferreting out passages in the Bible that do not seem to be in accord with what is indulgently known as the best in modern thought. But G. K. Chesterton, one of the wisest men of his or any other time, saw in this not a contradiction but a demonstrable truth. "There is," he wrote, "a very real metaphysical meaning in the idea that light existed before the sun and stars. It is not barbaric; it is rather platonic. The idea existed before any of the machinery which made manifest the idea. Justice existed when there was no need of judges, and mercy existed before any man was oppressed."

All this is just another way of saying that God's entire creative purpose existed in His infinite mind before he created man; that the natural law, under which our human law receives its only sanction, existed before God made man, breathed into him an immortal soul, and provided him with Nature's bounty. Let the pure scientist explore man's bodily origin; let the philosopher descant upon his journey's end; let the savant speculate about his future life. You and I can be concerned only with God's creative purpose. We know that man was created "to know God, to love Him, to serve Him in this world so that he may be happy with Him in the next."

Man's soul gives him intellect and will. It sets him above brute creation and makes him long to be the child of God that he is destined to be. Accountability to the Creator is the ultimate end of every soul. But God is just. Nothing is more manifest than the fact that if man is to be held accountable for his acts, he must be free to act, to accept or to reject God's commandments. Hence, God, who gave us life, gave us the twin boon of freedom—an inalienable right, the negation of which is a defiance of God's creative purpose and a denial of man's individual responsibility to God. God has also ordained that men should respect the rights of one another; that rightfully constituted governments be the protectors of life and liberty, to the end that all His creatures may lead full, free, virtuous lives.

THE WORLD IS MAN'S

It is a principle of Catholic theology that just as man is for God, so all things created are for man. Man is the center of the material world, just as God is the goal, eternal and immovable, of all life. The world is man's abode. It is his to use during his preparation for the glory of his eternal home. For him the beauty of the skies; for him the heights of the mountains and the depths of the seas; for him the loveliness of the flower and the utility of the animal kingdom.

It is this concept of man and his relation to his Creator that made one legal authority write: "Either the individual is a personal creature of God, or he is owned by the state. Either government is man's agent for the protection of God's gifts, or the Communist, Fascist, or some other cult of totalitarianism is correct. American Government is built upon the fact of God's creation of the human soul. Our Government is not the cause but the consequence of our God-given liberties."

All would have been well with man, and his pursuit of happiness would have gone on serenely, had he not perversely ignored the Eternal Maker of the beauty and strength created for his benefit. Under the changing labels of materialism, rationalism, agnosticism, modernism, and naturalism, a purely secular education destroyed the harmony of the world, cast God out of the life of man, and attacked man himself, the noblest of God's creatures. Man was gradually dehumanized until he became a mere automaton, a robot, a glorified animal, sufficient to himself because his sufficiency was from nature, and not from nature's God. He stood stripped of his faculties, robbed of his mind, and bereft of his soul. He became the "almighty man," divorced from Almighty God, who had fashioned him after His own image and likeness.

The result was inevitable. A machine age developed a machine man. The false god of science ruled supreme. All worldly things, man included, were forced to adapt themselves to the vagaries of self-appointed supermen.

The analysis of man by the exponents of two nations now locked in the horrors of war indicates what a travesty the concept of man has become. One ideology says that "a human person is a material substance that has organized itself"—a patent contradiction in terms. To expand this definition, Bucharin, in the Communist A B C, estimates that the elements of the human body have a commercial value of 1 ruble 95 kopecks (about 70 cents). That is what "almighty man" is worth.

The other—the racist ideology—holds that "a human person is different from material substance, but not essentially different from an animal." I quote the exact words of this biological materialism: "Between a man of a higher race and a man of a lower race there exists a more essential difference than between a man of a lower race and a highly developed animal." Accordingly, the human person can be only an illusion because he has no immortal soul. He has no faculties, no dignity, no rights. He is of the earth, earthy. What a contrast to the true artistry of man, "made to the image and likeness of God," and using the fruits of the earth only in relation to his last end.

FALSE CONCEPT OF MAN

But let us not point too pharisaical a finger at the ideologies that are ravaging Europe, because our own beloved country has also had a part in destroying the true concept of man.

Our heritage from the founding fathers is Christian. If only our spiritual growth had kept pace with our material progress. In the brief span of 165 years, the United States has become the richest nation in the world by applying man's ingenuity to Nature's gifts. But in our development are gross irregularities that cannot be reconciled with our heritage. We seem to have forgotten what our ancestors knew so well: That God exists both as an imminent force and as our Father in heaven; that He is the fountain head of all authority.

Our neglect—or denial—of our heritage is bearing fruit, among other places, in a field where it touches you, as Christians, as Americans, and as lawyers. Its effects are only too evident in certain law schools that fail to teach law in its God-related perspective. The substance and manner of their teaching can be construed only as an attack upon the very foundations of American jurisprudence. There are, thank God, exceptions.

One university that I know well—because it has been part of my life for many years—still cherishes the concept that gives American institutions their soul. In fact, the dean of its college of law recently stated publicly that an exhaustive study of the Declaration of Independence is a "must" for every student under his jurisdiction. I might add that his pronouncement has the militant approval of the president of that university.

You lawyers know even better than I that for some time an astute and tireless little band of atheists has been at work on a project for the secularization of American law. Surreptitiously but deliberately, they have been opening the veins of our legal system and draining off its vital life blood. In truth, witnessed by the Declaration of Independence, religion is the warp and woof of our entire American legal fabric. But these materialistic schemers are schooling our generation to think otherwise by constantly representing our law as a body of purely secular regulations for the efficient management of a completely secular order.

All this is cynically calculated, first, to weaken, and then, as soon as possible, to cut the cord that anchors American jurisprudence to its moorings of God's own truth. The watchword of secularist jurisprudence is expediency. This school of legal thought recognizes no truth that is not subject to change with time and circumstances. The secularists abhor the idea of natural law with natural rights of individual persons. Hence, they lose no opportunity to discredit the legal implications of the Declaration of Independence, the very birth certificate of American jurisprudence.

AN AMERICAN PRINCIPLE

No secularist can afford to admit what the Declaration of Independence affirms, namely, the self-evident truth of God-given inalienable rights. No secularist dares to confess that to secure those rights, government with its implements—its laws and officers—is instituted among men.

The Founding Fathers who defined the objects of our Government and the objects of its laws were men of unquestioned faith in God. Without equivocation and in crystal-clear terms, which even the intellectualists are unable to misconstrue, these Founding Fathers sentenced American law and American Government to serve forever as man's democratically chosen agent for the protection of God's gifts. Once and for all, the founders of this Nation welded the connection between religion and law. This is the safe anchorage of firm faith and fixed truth from which the secularists hope to cast adrift the American ship of state.

The self-evident truths of the American Declaration of Independence constitute the only political refuge left in this mad totalitarian world. These truths, and they alone, are the basis of our distinctively American and liberty-protecting practice of judicial review, which has its ultimate sanction, not in the letter, but in the spirit, of our constitutional system—that is, in the inalienable-rights doctrine of the Declaration. These truths, and they alone, keep the American citizen from descending to the level of a chattel, the servant of the state. They constitute the lawyer's only answer to the diabolical theories of the dictators.

If the secularists should succeed in proving that these self-evident truths are false, they will automatically prove that the totalitarian theories of Hitler and Stalin are scientific and correct. Like the European dictators, they are inoculated with a philosophy that leads eventually to the worship of the "almighty man." They would destroy God's creative purpose in regard to man, as so beautifully expressed by Shakespeare:

"What a piece of work is man!
How noble in reason!
How infinite in faculty!
In form and moving how express and admirable!

"In action how like an angel!
In apprehension how like a god!
The beauty of the world!
The paragon of virtue!"

—*Shakespeare, "Hamlet."*

Coincident with the fall term of court, you have assembled here this morning with your beloved bishop and priests to invoke the blessing of the Holy Spirit on another legal year.

THE THREAT OF TODAY

This is an ominous time, and God alone knows what the future holds. Yet as true Catholic lawyers you face that future with strong faith, noble courage, and uncompromising principle. The natural law is based on the eternal law, which is God Himself. It is your heritage, as it is the heritage of every Christian lawyer. You know as well as I that insidious movements now under way are based on the rank philosophy of naturalism. They have as their objective the ascendancy of man and of man-made law. Your attitude toward them is determined. Your course is fixed. You must rise up as a body, united against their devices, because you cannot compromise with objective truth.

When certain groups under the guise of rebuilding the United States attempt to change the substance of our Government, from which human positive law proceeds, take your stand on the side of justice, and, tearing off the mask of the dissemblers, say to them in the language of the court: "It shall not be. Case dismissed." For what is needed are legal lights to shine, not when the world is bright but when the world is dark, reflecting always the rays of the Supreme Lawgiver.

When Sangerites and others, purveyors of filthy doctrines, attempt to have their iniquitous teachings legalized by statute, take your stand on the side of basic morality, and declare that God's commandment, "Thou shalt not kill," is as binding today as it ever was, and in the language of the court say: "It shall not be. Case dismissed." For what is needed are legal lights to shine, not when the world is bright but when the world is dark, reflecting always the rays of the Supreme Lawgiver.

When certain legal ethicians attempt to develop a cult which changes the theory of the law so that the institution of marriage, the right to educate, the right to property, the protection of the weak, and other essential rights proper to the individual are taken from him and subordinated to State or Federal control, rally to the dignity of the human personality. For the rights involved here are antecedent to any human society. In the language of the court: "It shall not be. Case dismissed." For what are needed are legal lights to shine, not when the world is bright but when the world is dark, reflecting always the rays of the Supreme Lawgiver.

The great Webster said in his address on The Character of Washington: "Other misfortunes may be borne and their effects overcome. It were but a trifle even if the walls of yonder Capitol were to crumble, if its lofty pillars should fall, and its gorgeous decorations be all covered by the dust of the valley. All these might be rebuilt. But who can reconstruct the fabric of demolished government? Who can raise again the well-proportioned columns of constitutional liberty? Who can frame together the skillful architecture which unites national sovereignty with State rights, individual security, and public prosperity? If these columns fall, they will be raised not again."

DUTIES OF THE LAWYER

It rests with you and your associates of the bar to enlighten the people, now befuddled in their thinking, to a realization of what bureaucratic government means. For what is needed are legal lights to shine, not when the world is bright, but when the world is dark, reflecting always the rays of the Supreme Lawgiver.

Yours is a noble calling, a distinguished profession. People look to you for guidance in the temporal as they do to the priest in the spiritual. You are the alter ego in relation to your clients. They confide in you, they trust you, they look to you for guidance. That you realize your duties and responsibilities is attested by the fact that you gather here annually to ask divine guidance and strength in their fulfillment. But if you are to teach and defend our fellow man, if you are to discharge your duties faithfully and honestly, permit me to suggest that you always keep before you the necessity of growing spiritually in the knowledge and love of the Supreme Lawgiver.

Accordingly, nourish your faith constantly by prayer and the sacraments. Revive your hope by reflecting on the emptiness of this world and all its fleeting show. And let the charity of Christ always pervade your minds and hearts. For, in the words of the inimitable Cardinal Newman: "Times come and go and man will not believe that that is to be which is not yet, or that what now is only continues for a season and is not eternity. The world passes, it is but a pageant and a scene; the lofty palace crumbles, the busy city is mute, the ships of Tarshish have sped away. On heart and flesh death is coming; the veil is breaking. The end is the trial."

May you meet the Supreme Lawgiver smiling.

William O'Dwyer Accepts

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

ADDRESS OF JUDGE WILLIAM O'DWYER

Mr. KEOGH. Mr. Speaker, under leave unanimously granted to me, under date of September 23, 1941, I am privileged to extend my remarks by including therein the acceptance speech of Judge William O'Dwyer delivered at New York City.

I am prompted to preserve this speech as part of the record, because so much of it is devoted to a problem that is of such tremendous importance to the continued well-being of the country.

Judge O'Dwyer brings to the subject of his speech a wealth of experience gained from a useful life well spent in the service of this country, our city, and its people. His has been the saga of so many Americans—his steady rise, the glory of our democracy—laborer, student, policeman, magistrate, county judge, and district attorney of Kings County, one of the largest in the country. His life has been a continuous application of the Golden Rule which is so necessary at all times, and especially today. It is hoped that all who have the opportunity to read this splendid address will do so. It is as follows:

Last Tuesday I was nominated as the candidate of the Democratic Party for mayor of the city of New York. I accept the nomination, not only mindful of the honor but also conscious of the responsibility. I owe my nomination to no man or group of men; to no political leader or group of political leaders. In fact, not until after I was formally designated had I ever met any of the Democratic county leaders except the leader of my home borough and of the Borough of Queens.

I submitted my candidacy to the Democrats of this city on my character, my experience, and my record in the public service. I am the unanimous choice of the enrolled Democrats in this city, of whom there are 2,273,367. Therefore, I am beholden to no one but the Democratic men and women of this city for my nomination, but when I am elected I will represent not them alone but all the people of the city regardless of party, race, or creed.

I propose to conduct an aggressive and constructive campaign. I did not decide to become a candidate merely to go through the motions of a campaign, or to indulge in petty fault-finding, or to engage in petty criticism of things done or left undone by the present administration. I believe there are questions involved in this election which go to the very root of the government of the city of New York and the welfare of its people, and during the campaign I will fairly and fearlessly present the issues as I see them. I say fairly, for I would be less than truthful if I stated that the present administration has made no contribution to the city of New York. Every administration has contributed something to the city. It would be foolish to contend that the present administration has contributed nothing, but you must remember that during the last 8 years the city pay roll has increased from $322,821,594 to $379,089,631, exclusive of the Rapid Transit employees; an increase of $55,000,000; that the budget has increased from $615,327,071 to $677,026,580, an increase of $52,000,000; and that the city has received from the Federal Government $72,000,000 in cash out of a total of $83,000,000 authorized as grants, and has also received from the Federal Government on account of P. W. A projects loans totaling $31,350,000. These staggering increases have occurred despite the express promise of the mayor when he was first a candidate, and I quote, "to save $50,000,000 by clearing out a horde of political parasites and cutting out useless jobs."

Obviously, during the time available this evening I cannot define and consider all the questions which I believe should be discussed frankly and must be decided correctly if New York City is to grow and prosper. But at the very outset I wish to discuss and dispose of one issue which our opponents say is the fundamental issue in this campaign.

In a speech announcing his willingness to be a candidate again, the Mayor stated—and I quote—that all the city departments are in charge of "specialists, trained and competent men who, for ability and specialized knowledge and efficiency, form a cabinet the like of which does not exist in any government in this country." I challenge that statement. I admit that some members of the Mayor's cabinet are competent and efficient public servants and should be retained. I will, however, during the campaign show that other appointees of the Mayor are not only not specialists and were not named because of any particular talent or special aptitude for the positions they hold, but to repay political debts. I will demonstrate to the satisfaction of every fair-minded man and woman that some of them are a menace and should be promptly and peremptorily separated from the public service.

In the same speech offering himself as a candidate for reelection the Mayor stated—and I quote again—that the issue is between "nonpolitical, nonpartisan, and political machine-controlled government." I also challenge that statement.

I recognize that heretofore in both parties, Democratic and Republican alike, there have been cynical, selfish groups who thought of public office primarily, perhaps solely, in terms of patronage and political power. I also recognize that these men, leaders,

bosses—call them what you will—were able in many instances to exert their baneful and sinister influence over those chosen to administer the government. This situation existed not only in New York but in many other cities. It obtained not only in many municipalities but in many State governments as well. But times have changed. The day of old-fashioned machine government is gone forever, at least in the city and State of New York. It is as outmoded as the hoop skirt or high pants pockets. People now think for themselves. They have developed a social and political awareness which bodes ill for the man in public office or political position who does not realize that the old days of private profit—which is another name for political plunder—are gone forever. I do not want and will not have the support of any such political leader either within or without my party. Honesty in the public business is essential if democracy is to survive. I believe that the place for all crooks, whether they be pickpockets or politicians, is in jail.

True, I am a member of the Democratic Party. I recognize there is no Democratic or Republican way of cleaning a street or putting out a fire, but I believe that in a democracy, party responsibility adds greatly to the protection of the citizen. I also believe, however, that in a representative government no elected official may shift to his party the obligations which his oath of office casts upon him.

Yes; I am a Democrat. So is President Roosevelt; so is former Governor Smith; and so is Governor Lehman. As a Democrat, Al Smith was elected Governor three times. As a Democrat, Franklin Roosevelt was elected and reelected Governor. As a Democrat, Herbert Lehman was elected and three times reelected Governor. I am the candidate of the same party which nominated and sponsored each of those illustrious men. Is there anyone bold enough to suggest that as Governor any of them turned over the State government to a political machine or was controlled by a political boss? Of course not. Nor does anyone dare suggest that when I am mayor I will turn over the municipal government to a political machine or be dominated by a political boss.

My record first as a member of the New York City Police Department, then magistrate, then county judge, then district attorney of the largest county in the State and the second 'argest in the country, is a complete answer to any such suggestion. Throughout 17 years in public service, no political leader or anyone else ever influenced my judicial or official conduct. Nor has any political leader ever been brazen or foolish enough to make the attempt. In 1937, after serving 5 years as a city magistrate, Governor Lehman appointed me county judge of Kings County, to which office I was elected the following November. You will recall about that time crime was rampant in Brooklyn The guilty were not only not punished but frequently not even apprehended. Many major crimes were left unsolved. The situation was so serious that Governor Lehman convened an extraordinary term of the supreme court to expose the conditions and ascertain if there were any corrupt alliance between the wrongdoers and the law-enforcement agencies. I was happy and contented as county judge, for it was the realization of a life's ambition and afforded me an opportunity for greater usefulness not alone in ridding Brooklyn of the hardened and habitual criminal, but at the same time salvaging many an unfortunate youth who, because of home environment or lack of religious training, had committed his first misstep. Moreover, I was secure for 14 years, at a salary of $25,000 a year. Nevertheless, in response to a general demand and what I believed was my duty to my county, city, and State, I consented to become a candidate for district attorney, the term of which was only 4 years and at a greatly decreased salary.

During that campaign for district attorney I publicly stated what would be my attitude toward political organizations and political leaders if I were elected. I said I would devote my whole time to my duties as district attorney; that I would reorganize the office; that my assistants would be selected by me and me alone; that character and fitness would be the sole considerations for appointment to my staff; that while political affiliation would not disqualify, it could not aid any applicant; and that no political leader would be consulted as to who would be fired or hired. The opposing candidate, while admitting my good faith, said I would be powerless to carry out my plan. But the people of Brooklyn believed me and trusted me; they knew I meant what I said, and I kept that promise. Candor compels me to state that no political leader ever attempted to influence me in the selection of my staff or the conduct of my office. What has been done, what has been accomplished in the last 21 months is history. I trust I will not be deemed immodest, but since I became district attorney 87 murders, not only in Brooklyn but in other boroughs in the city and other counties in the State and in other States throughout the country, have been solved. Many of those who committed them and, more important, many of those who inspired them, have been apprehended, prosecuted, and punished; crime has decreased; our docket is up to date and Brooklyn is a cleaner, safer, and better place in which to live and do business. My record has gained the praise of the press regardless of politics and has won the approval of the people irrespective of partisanship.

I ask to be judged on that record. I offer it as an assurance that when I am mayor the government and affairs of the city of New York will be administered with integrity and efficiency and in the interests of all the people, taxpayer, and rentpayer, businessman and laboring man alike.

As the candidate for mayor I make this promise to the citizens of New York. It is the same promise I made to the people of Brooklyn when I was a candidate for district attorney. I promise to devote my whole time and all my energies to my duties as mayor. I will be a full, not a part-time mayor. I promise that no political machine and no political leader will control me or dictate the policies which I will pursue or the appointments which I will make; that each member of my cabinet and each judicial officer appointed by me will be my own selection, whether he be a member of the Democratic Party or the Republican Party or no party, chosen solely because of his character and fitness and for whose acts and conduct I will assume full responsibility. I can promise no more. I should be unworthy if I promised less.

This is my answer to what the mayor says is the fundamental issue in this campaign. I have met it squarely, discussed it frankly and disposed of it finally. If after examining my life's history and my public record you are satisfied that I mean what I say, that I will keep that pledge, I ask you to vote for me.

There is another matter to which I invite your attention, and I approach it in the same open and candid manner so every citizen of New York may readily understand my position.

I appreciate that a municipal campaign is no place for the discussion of national issues or international questions. Our foreign policy is not the business of the mayor of the City of New York. Power to deal with the country's foreign policy has been wisely delegated to the President and the Congress. But in view of the present world crisis, when during the last 2 years 13 countries have been invaded, their governments overthrown, their citizens killed and property destroyed by the wicked exponents of force, the people of this city have a right to know the attitude of the man who aspires to be their mayor. Hence, I repeat what I frequently have said before. I hate communism, fascism, and nazi-ism and I oppose all other ideologies hostile to our democracy. I believe in the democratic system and the American way of life. I abhor the dictators, whose greed and infamy are responsible for the suffering and misery which have been visited upon countless thousands of innocent men, women, and children, whom they have rendered homeless, helpless, and hopeless.

I believe with President Roosevelt that the most effective answer to Hitler's method of total attack is total defense. I endorse the policy of the President in defending our sovereignty and democracy and the policy of the President and Congress in giving aid to those countries which are resisting Nazi aggression. As mayor of the city of New York, which is the center of our industrial life, I will lend every assistance in promoting and perfecting the national defense. I will do my utmost to discourage intolerance and establish unity and harmony among our people.

That there are in our city certain persons seeking to disunite us by dividing us into racial and religious groups cannot be denied. They do not represent the patriotic people of America or the self-respecting citizens of New York. They are in the main motivated by the same impulses which years ago gave rise to the A. P. A. and the Know-Nothing movement, and later to the Ku Klux Klan. Only 13 years ago a great American, a great exponent of democracy, was denied an office for which he was eminently fitted, not because the members of the Klan and other bigots opposed his political views but because he professed before God and man the faith of his fathers.

Happily the Klan is now extinct, and its disciples have slunk back to the shadows whence they came. But recently there has sprung up amongst us another group of bigots who subscribe to a doctrine just as alien to our American concept as the Klan, even though they do not mask themselves in a sheet. This ugly and sinister thing is anti-Semitism. It is the principal export product of Hitler, designed to sow the seed of discontent, distrust, and hatred among the peoples of the world so as to facilitate their conquest. This group, which has been active in our city, has been ignored too long. Its members have been permitted at their street meetings to insult and vilify the Jew.

It is this group that conducted a whispering campaign against Herbert Lehman solely because of his race and religion when he was a candidate for Governor, just as the earlier group conducted the same kind of a campaign and for the same reasons against Al Smith when he was a candidate for President. When I was a candidate for county judge I abandoned my own campaign and in Brooklyn and elsewhere I denounced them and their practices, as I do tonight. When I was a candidate for district attorney I promised, if elected, that I would not stand idly by and permit these racial and religious fanatics to incite disorder, provoke violence, and create disunity in the life of our community.

I yield to no one in my devotion to the fundamental tenets of free speech, a free press, and freedom of worship, but I am happy to say that, without infringing upon any of these sacred guaranties and without any additional laws, I succeeded in stopping these undemocratic, un-American public demonstrations, and we now have no such public meetings in Brooklyn. When I am mayor we will have none in the city of New York.

The injection of racial and religious prejudice into the discussion of our domestic

problems or our foreign policies is an abuse of the right of free speech. That some of these fanatics, both anti-Catholic and anti-Semitic, were elevated to high place under the present administration is to be regretted.

I promise when I am mayor I will not appoint or tolerate in the city service anyone who preaches intolerance or class hatred and thereby sows the seed of discontent, distrust, and disunity. Nor will I appoint any man or woman who now or heretofore has been affiliated with any party, organization, or group which advocates the overthrow of our Government and the substitution of any other system or who does not believe in our democratic institutions and subscribe to the American way of life. If there be any such in the public service they will be promptly removed. There will be no room in my administration for a Gerson or a Kern, or any of their fellow travelers.

I would be thoughtless, indeed, if I failed to add a word about my colleagues on the Democratic ticket, Lloyd Church, the candidate for comptroller, and M. Maldwin Fertig, the candidate for president of the council. Judge Church is a distinguished member of the bar and during the last 7 years has been a justice of the supreme court. At great personal sacrifice he resigned that office to become a candidate for comptroller of the city of New York. He is a man of broad experience in business, legal, and governmental affairs, and by ability and training is abundantly equipped to manage the finances of the city of New York and as a member of the board of estimate to shape its policies.

Mr. M. Maldwin Fertig, the candidate for president of the council, has been an assistant to the corporation counsel of the city of New York. He also was counsel to President Roosevelt when he was Governor, and counsel to Governor Lehman. At present he is a member of the transit commission. I doubt if there is a man in this State who has a more intimate knowledge of the government of the city of New York than has Mr. Fertig.

Both these gentlemen are forceful, forthright men who have the intelligence to formulate opinions of their own and the courage to express them. While they will be of invaluable aid to me, they will, as they should, be independent of and not subservient to the mayor. We promise the people of the city of New York an honest, efficient, economical, and dignified administration.

The Small Businessman

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

Mr. SPRINGER. Mr. Speaker, one of the most serious threats which the people of this Nation face is the threat of the destruction of the small businessman. About every pet measure which can be enacted into law, and about every pet regulation that can be established by the various departments of government, the boards and commissions, which will cripple the small businessmen of our country has been enacted and put into effect. The small businessmen of our country are feeling the impress of those stern and staggering blows. Men and women who have engaged in business throughout their lives, and who have been both honorable and patriotic as Americans, are being forced to discontinue their life work because of their inability to secure priorities on needed materials for the continuance of their business.

These businessmen and women have been the very backbone of our country. They have aided in the growth and development of our Nation. They have paid their taxes, and they have employed such help as they have needed in the operation of their business. They have made a worthy contribution to the progress of the United States of America. But now, under the flimsy guise of the national emergency, they are not given defense contracts, and they are not given material by which they can continue in business. This unholy plan must be remedied at once or we will experience an unprecedented unemployment situation in our country. The people engaged in business must be protected rather than have their business destroyed and their employees thrown out of their jobs. A plan must be devised whereby at least 75 percent of the needed materials required by the nondefense industries may be supplied, thereby enabling them to continue their operation in part, and enabling them to keep their organization intact. Defense contracts should be provided to the various plants in order to maintain a continuous operation of those institutions in which the needed materials come in sharp conflict with those badly needed for defense production. This is essential in order to keep our factories and mills in continuous operation, and to assure to the employees continuous employment in the future.

Recently Secretary Morgenthau made a statement in which he suggested, under the price-fixing plan, that all business should be limited to 6-percent profit. Such a plan, if adopted, would be disastrous to business in our country. That would strike at the very heart of business. Such a plan would cause thousands of businessmen and women to close their doors and cease to operate their establishments. Their employees would be thrown out of their jobs. We must remember that if the employer is injured, the employee is likewise injured. The partnership of employer and employee is an inseparable unity; they work together; when the employer secures contracts for work, at a fair margin of profit, then the employeees have continuous work, at a fair and reasonable wage. This is a very happy condition.

But, Mr. Speaker, when the Government refuses to issue priorities for needed materials, even though the factory or the mill, or the contractor or the builder, has a contract or contracts to perform, then the work must stop. The employees are discontinued in their work. That is the destruction of both the plant, and the business, and the opportunity of the laborer to earn his own living—all caused by our own Government refusing to permit the needed materials to be allocated to that plant, or to that contractor. In that case, the Government is primarily responsible for the loss of the operation of the plant, and the completion of the contract, and it is also responsible for the employees being thrown off of the job.

Precisely this same result is obtained when there is such a sharp reduction in the allowable profits which may be earned. Plants and mills will be compelled to close; their employees will be thrown out of their jobs; all because of the governmental interference to the extent that the employer cannot maintain his plant, and take care of the ordinary wear and tear incident to its operation, and meet the high and staggering taxes and obligations which have been imposed by his county, State, and Government. These obligations must be met, and if they are not met in full accordance with the provisions of the existing tax and revenue laws penalties must be added; if the tax and the penalty is not paid, then the property will be sold. The employer and the small businessmen and women of our country face a very dark and dismal future.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD, and to include therein a very interesting and enlightening editorial which appeared in the Washington Times-Herald, of the 26th day of August 1941, which I hope every Member of the House will read. The editorial reads as follows:

[From the Washington Times-Herald of August 26, 1941]

EXIT THE SMALL BUSINESSMAN

The national-defense program is setting the stage for a hoped-for wiping out of Hitler and his philosophy, somewhere, somehow, sometime. But the defense program is also beginning to wipe out the small businessman in the United States; and up to now it is hard to see how the process can be stopped or even slowed down.

DEVASTATION BY PRIORITY

Defense demands get priority over demands for materials for nondefense goods. Many a small manufacturer, for all the optimistic talk on the subject, physically cannot shift over into making defense goods.

From this situation, all manner of consequences are already flowing. There are bad bottlenecks in aluminum, brass, copper, certain chemicals and plastics, chromium, zinc, and, above all, steel. These shortages produce shortages in such things as nuts, bolts, rivets, screws, zippers, paper clips, and innumerable other articles needed by small manufacturers to make consumer goods.

The paralysis spread from these manufacturers to dealers, who find themselves with less and less to sell, and consequently have to cut down their sales forces. Unemployment and discontent result all the way along this spiral. The harvest is unpredictable just now, except that you can safely predict that it will be a sour harvest.

THE WAR HAWKS

What is the reason for it? Our all-out effort to build a huge armament for ourselves and to arm or help arm every nation fighting an aggressor nation or nations.

Who is responsible? Mainly, as we dope it out, two groups in Washington.

One of these is the war party, headed by Colonel Knox and President Roosevelt. Colonel Knox likes war for its excitement and its glory, judging from his speeches and from the fact that he distinguished himself in two wars. The President hopes to bring to the whole world, through war, in our generation, freedom from want and fear and freedom of

religion and thought—something which nobody in all world history has yet done or, to our knowledge, even hoped to do.

THE RED WRECKERS

Then, there are the Communist-minded theorists and philosophers, with whom Washington is honeycombed.

These people feel that the modern trend is toward communism, in this and all other countries except Russia, which has already arrived at the goal.

In the Communist philosophy, landlords, investors, bankers, merchants, businessmen, lawyers, priests, nuns, and independent newspaper people are enemies of society. These groups make up the bourgeoisie, which the Communists hope to wipe from the face of the earth.

So the oncoming destruction of the small businessman in this country is O. K. by the comrades and fellow travelers now holding so many places of power in the United States Government. As they see it, the war will bring about the revolution here much faster than it could come in peacetime.

And they are as coolly willing to see the small businessman wiped out as they are to have one or more millions of American boys massacred in Europe to keep Communist Russia safe from Adolf Hitler.

FROM EVOLUTION TO REVOLUTION

Before the war began, the New Deal was moving toward a species of totalitarianism—meaning toward more and more government supervision over individual greed and ambition for the general welfare. We thought that was as it should be, and in line with evolution, and we still think so. But we also thought, and still think, that if this country could stay at peace and mind its own business the necessary readjustments could be made peaceably and gradually, and without wiping out whole economic layers of our society.

The New Deal was getting that result—jerkily and with many a stumble and mistake, true; but it was making the grade, until this war broke out. It even kept its head fairly well screwed on until the fall of France in June 1940.

Since that time, we have been dragged ever closer and closer to all-out participation in this war by our Washington masters. The people—from 75 to 85 percent of whom, we are convinced, do not want to go shooting into this war—have been able to do nothing up to now to call a halt.

The war hawks apparently have forgotten all about domestic reform and readjustment in their preoccupation with a foreigners' war. But the Communists and their fellow travelers in the Washington set-up have not forgotten the Communist revolution which they hope this war will speed up in the United States. You can almost see them licking their lips as they watch the small businessman being ground up in the priorities meat chopper.

Farm Prices Are More Than a Mere Theory

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

Mr. CURTIS. Mr. Speaker, the price of farm products may be a theory to the regulators who sit in easy chairs in Washington, but to the farmer and his wife and children they are a grim reality. Many farmers depend for a living upon the weekly check that they receive for their cream, butter, eggs, and poultry.

When these prices go down it vitally affects the so-called human values so far as the farm family is concerned. In many cases a depressed price of farm produce means a definite hardship. At the best, it means that the farmer buys fewer shoes, clothing, furniture, radios, automobiles, and all the other things that he needs, as well as the bare necessities.

An outrageous attack has been made upon the American farm home by the subsidizing by the United States of butter substitutes. The taxpayers' money has been used to provide radio programs to advertise butter substitutes. The Government's financing of advertising of products that compete with the products of the American farmer cannot be justified before the court of public opinion.

Mr. Speaker, now comes some startling news in reference to the importation of eggs. I wish to include in my remarks an Associated Press article bearing date of October 1, 1941, which is as follows:

Arrival of 1,334,700 dozen Argentine eggs in New York, making the second time this month in which eggs have been shipped here from that country, helped to depress futures prices on the Chicago Mercantile Exchange yesterday.

Traders here were advised that 6,000 dozen of the Argentine eggs were sold in the New York wholesale market at 26 cents a dozen, compared with 32½-cents-a-dozen quotation here for domestically produced eggs of the same grade.

Mr. Speaker, I plead for a fair deal for the American farmer. Is he not entitled to the same protection that we give to American labor and American capital? To whom does the American market belong?

A Republican Goes Through the News

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

EDITORIAL FROM THE LIMA (OHIO) NEWS

Mr. JONES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by the city editor of the Lima (Ohio) News:

[From the Lima (Ohio) News]

A REPUBLICAN GOES THROUGH THE NEWS

(By Jim Blissell, city editor, the Lima News)

President Roosevelt last week again resorted to one of the favorite tactics of the New Deal when he ridiculed charges that the motion-picture industry is circulating war propaganda in films.

Now propaganda, as usually understood, is a lie in a newspaper or magazine and supposedly easily discernible. That is one good definition. Another, and more fitting definition, is that propaganda is anything that will motivate people to action or create a receptive mood or an acceptance of some philosophy. In our modern terminology, it is a job of "selling an idea."

While the President may ridicule the charges, the fact that he chooses to do so does not cloak him with an aurora of omnipotence nor his interpretation with the wisdom of a Solomon. As a matter of fact, he has been wrong, dead to rights, on many issues. A simple examination of a few of the facts regarding propaganda in movies will show him wrong again, ridicule to the contrary notwithstanding.

Senator NYE pointed out a number of films he said were propaganda bunk purely and simply. In his list he named Blackout, I Married a Nazi, Night Train, and Convoy. While we did not see those particular films, we did witness a few that contained the insidious and subtle appeal for appreciation of the British cause against the Nazis.

What were they? Well, They Met in Lisbon was a beaut. Fred MacMurray should have gagged when he uttered the dialogue in one scene. Enacting the role of an American ferrying bombers to England, the sequence in point shows him with his arm around an Englishman and telling him, in effect: "Yes, we are of the same blood; we talk the same language; we think alike; we act alike. We must stick together." That, to any fair-minded analyst, is certainly a play for sympathy and solidarity between the English-speaking classes.

FACTS STICK OUT IN RECENT FILMS

Quentin Reynolds, who has been cleaning up writing from London, had a "drammer" on the screens of this country at the Yuletide season that would put the old tear jerkers to shame. It was Christmas in London, if memory serves. That was probably the most bald-faced piece of propaganda foisted upon a public that pays to be entertained that we have seen in some time.

The Brothers Warner have come in for some criticism. How about their Dr. Ehrlich's Magic Bullet? In this supercolossal epic, all the good characters talked clear, concise, and intelligible English. All the bad characters talked with thick, guttural German accents.

The purpose? To work on your subconscious, friends. To sneak in the back door, so to speak, and impress upon you that the English are our cousins. That in this hour of Empire peril we should forget the "Uncle Shylock" appelation and once again give our manhood and our money to a cause that was lost long before hostilities ever broke out.

Mr. Roosevelt said he does not know of anyone in the administrative branch that has encouraged production of war propaganda films as charged in the Senate subcommittee inquiry.

It might be far-fetched, but a little number that played Lima not over 2 weeks ago was a honey. The picture, in beautiful technicolor and with Frank Craven, the epitome of An Average America, in the lead, was selling the glories of the Federal Housing Administration and Craven worked in from time to time the fact that only in a country such as this could such a thing happen. Mayhap you will say he was selling Americanism. We don't think a true American has to pay to have himself nor the glories of his country propagandized on the screen, first through taxes and then at the box office.

Maybe the "Barefoot Boy From Indiana," Wendell Willkie, who termed his own speeches as "campaign oratory," will be so eloquent he can convince a majority that it was all in good, clean fun on the part of the producers. But the facts will belie the claim. In any event, Willkie will collect a fee of $100,000 from the Hollywood moguls.

Propaganda for war takes more than one form. This pillar from time to time has

characterized various "emergencies" as pure hokum to keep the peoples in a constant state of hysteria.

No better example of this cry of "emergency" can be found than in the Ickes gasoline curfew in the East. After having been shown through absolute proof that his famine claims were without foundation in fact, "Honest Harold" characterizes a move to lift the ban as stupid.

Although a Senate investigation disclosed that Ickes must have been suffering from hallucinations when he proclaimed the shortage and curfew, he still insists he was right.

That, ladies and gentlemen, is the mark of every move this administration has attempted. No matter what the facts, anyone high in the councils of the Roosevelt regime can do no wrong.

The proposition of this Nation entering a shooting war because of the intrigues of our leaders transcends political ties. The grave questions facing the Nation are not founded on whether or not it is a Republican policy or a Democratic (or New Deal) policy.

The issues are well defined. We have been promised peace by a leader who usurped the powers in the party that first elevated him to exalted office. He used that office to control a political machine on the one hand, while on the other he voiced high-sounding promises addressed to the mothers and fathers of this Nation.

Certainly in the light of the facts that are known, and excluding the suspicions that must enter the minds, there can be no conclusion but that the war emergency was a false cloud created by the Roosevelt regime to remain in power. Having created the Frankenstein, the beast now bids fair to devour its makers.

PATROL OPENS UP NEW DANGERS

The American people heard talks of "money on the barrel head" when the aid-to-England bill was being discussed. Now we have outright admissions by Secretary Knox that the Navy is convoying. First it was patrol; now it is convoy. In any event, the stretche. of the broad Atlantic were set off with precision by the President under emergency powers granted him, just as he opened the Red Sea.

There can be no misunderstanding. The defenses of this Nation do not lie in the Red Sea nor in the English Channel. Use of our Navy to convoy lend-lease goods to Britain will have two immediate effects.

First, and by far the most vital to this country, which everyone in Washington seems to be forgetting, is the fact that our sailors and ships will actually be shooting once they meet up with Axis men-of-war. The other is that by convoying, the British Navy will be released for more duty in the Mediterranean. Certainly the people of this Nation did not envision these things when they permitted their Congressmen and Senators to approve the war-bill powers granted Roosevelt.

Racial Problems in Latin America

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

EXCERPTS FROM AN ARTICLE BY CHARLES ANDERSON GAULD

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks, I submit for the RECORD excerpts from the long article on Brazil and the Negro by Charles Anderson Gauld in the Negro History Bulletin for February 1941. I made references to this article in the CONGRESSIONAL RECORD of March 14 and 25, 1941. It is based on research in the Library of Congress, where Mr. Gauld was a specialist on Latin America.

Mr. Gauld is of an Army family and has stressed the importance of Brazil and the Negro to hemisphere unity and defense in this crisis which menaces the security of all the Americas. Emphasis is placed on the contributions of the Negro to the life, culture, and defense of both Brazil and the United States. The two largest nations of the New World cannot afford to deny their 30,000,000 Negro citizens their share of commissions in the armed forces and of industrial jobs in the defense of democracy on the economic front. Are we hoping for the destruction of nazi-ism in the Old World while retaining race prejudice in the New?

The article follows:

[From the Negro History Bulletin of February 1941]

BRAZIL: THE LARGEST NEGRO NATION

(By Charles A. Gauld)

Brazil is not generally credited with being the greatest Negro country. Yet possibly 16,000,000 of its 43,000,000 citizens are of African ancestry in whole or in part. The 1940 census in the United States counted Negroes with great accuracy. But Brazil's 1940 census will not yield statistics on the number of Negroes. Thus only estimates can be offered because no accurate figures exist.

The different manner in which the Negro is considered in the 1940 censuses in Brazil and the United States clearly illustrates the position he occupies in the two leading nations of Negro population. A census is chiefly an aid to a country's economy and government. In Brazil's fifth general census, which began on September 1, 1940, no specific questions were included on race. However, Brazil's approximately 14,000,000 white citizens were asked their European origins. These two circumstances are significant. They indicate that Brazil accepts her citizens of Negro descent without worry. Not so the more recently arrived and often potentially dangerous Europeans from lands now Fascist and their descendants.

* * * * *

RACIAL PROPORTIONS

An approximate impression of the racial proportions involved in Brazil's fascinating three-way blending can be gained by means of a diagram. Three circles represent the races. Largest circle is the white, next the Negro, and smallest the Indian contribution to the total Brazilian bloodstream. The circles should overlap so as to show a third of their combined area as unmixed white blood. The circles for Indian and Negro blood should only slightly extend beyond the overlapping zone of mixed blood. This is to indicate that but little Indian and Negro blood remains unmixed compared to the great amount combined with white blood in various three-way crossings. In other words, it is impossible to determine with exactness any data on the total number of whites, Negroes, mulattoes, and so on. Only by diagram can even an approximate picture be given of the diversity of Brazil's population and the difficulties involved in describing it.

It has been estimated that over 70 percent of United States Negroes have some white blood. In Brazil miscegenation has been freer and on a far grander scale between the three stocks. Therefore, probably over 90 percent of Brazilians of Negro ancestry have some white blood and possibly half in addition have a little Indian blood. The latter is generally remote, going back to colonial times. The white admixture is, however, more extensive than here, there being more persons in Brazil who are half or three-quarters Caucasian. Negroes in the United States have less Indian blood than in Brazil. Roy Nash in his excellent book in Brazil is enthusiastic for the future of the new race and culture being fused in Brazil by the white, Indian, and Negro. He feels it will be different from anything before produced by mankind.

NEGROES AND DEFENSE

Negroes have served with distinction in the wars of the United States and Brazil. Since the Brazilian Negroes helped expel the Dutch and French invaders in colonial times, the proportion of Afro-Brazilians in the army and navy has been notably larger than with us. Negro patriotism and loyalty are strong in both nations. There are no more American-minded citizens in either country. They are cold to European "isms." There is no "fifth column" among them. Nazis and Fascists may be able to organize many of the million German-Brazilians and some of the 3,800,000 Italian-Brazilians into dangerous antidemocratic groups. And the clerical dictatorship of Brazil's backward but delightful mother country Portugal may adversely influence the ideas of the five or six million Brazilians of pure Portuguese descent. The 1940 census reflects Brazil's suspicion of her European minority and her perfect confidence in her part-Negro citizens.

UNITED STATES NAVY PREJUDICED

It is ironical that there should be discrimination against Negroes in the armed forces of both republics. It is worse in the navies. The military academies of the United States and Brazil admit few Negroes; their naval academies admit practically none. The Brazilian Navy at least has thousands of Negro sailors and many Negro petty officers, while ours has no Negro sailors or officers. This undemocratic racism worthy of totalitarianism is morally inexcusable and strategically unsound. It is to be hoped that Presidents Roosevelt and Vargas will remedy it. It can be assumed that this denial of rights was inherited by our Navy from England and was copied in part in Brazil through admiration for British and American naval missions and traditions.

DEMOCRACY

In both Brazil and North America, Negroes are strong for democracy even though most of them are disfranchised. Most Brazilians are voteless not through prejudice but because of illiteracy. Our Negroes, outside the South, can be more active politically than Brazilian Negroes in recent years. During the well-intentioned regime of President Getulio Vargas, despite governmental reforms and marked economic progress, Brazil's troublesome problems have led to the suspension of national and state legislatures and elections. The Brazilian Negro holds no such potential political balance of power as our northern Negroes, as Brazil does not have a two-party system. Brazil is still evolving toward democracy, but must first reduce her present illiteracy of over 70 percent, and poverty, poor health, and faulty communications if she is to attain any large measure of real democracy by late in this century, many scholars feel

THE NEGRO'S ECONOMIC PLACE IN BRAZIL AND THE UNITED STATES

Brazilian Negroes live in a country that is potentially prosperous but that is still poor. United States Negroes are citizens of the world's richest nation. Special Negro political status here means that periodically politicians capitalize on discriminations and lynchings in bidding for the northern Negro vote. The Brazilian Negro seldom gets to vote, but he faces few discriminations and no lynchings. Discriminations are even fewer in predominantly non-Caucasian North Brazil

than in the mostly white South, the dominant part of the country. In the cities of South Brazil—Rio, São Paulo, Porto Alegre, and so on—where Europeans settled by the million, the Negro is outnumbered and is less freely admitted to economic and social equality. British and American businesses are numerous and important in South Brazil, and Anglo-Saxon prejudices have had a certain influence.

Despite being badly treated in the United States, the Negro in this rich land has made relatively more economic progress. He has better education, health, and income than Afro-Brazilians, who have less property partly because so many of them were not emancipated until after 1870. Final emancipation came peacefully by law in 1888 for the minority still in bondage. Happily Brazil suffered nothing comparable to our Civil War and reconstruction with their subsequent embittering of race relations. In Brazil there is no need for the Negro to organize separate schools, cafes, banks, and businesses. Colored people have attained prominence oftener in Brazil than here because of greater opportunities. President Nilo Pecanha had some Negro blood. Negroes have made equally eminent contributions in the two countries in art, music, and literature.

SOUTH BRAZIL

It must be admitted that South Brazil feels a certain regional and racial superiority over the nonwhite and economically less favored North After the decades of gradual emancipation and the law of 1888, North Brazil's plantations of sugar, rice, cocoa, and tobacco were hardest hit by the turning of thousands of Negroes to the cities, to industry, subsistence farming, and other activities. South Brazil's huge coffee plantations were able to escape losses by turning to the flood of Latin European immigrants who flocked in after 1885, particularly to the booming State and city of Sao Paulo. South Brazil, after the republic displaced the monarchy in 1889, dominated Brazil economically and politically. São Paulo became richer with the help of foreign capital through her coffee and factories than any half dozen of the poorer North Brazilian States. A pattern of regionalism, partly racial, arose. Brazilian society in the southern cities generally refuses to admit Negroes to its social life and clubs, or to allow its children to marry part-Negroes, even those of fine education and talents. North Brazil, the original plantation area and black belt, is now the neglected poorhouse of the nation. Like our South, its wealth has been drained to the financial and industrial cities.

THE NEGRO AND RELIGION

Religion, especially in its emotional and exuberant forms, has served in Brazil, too, as an escape from poverty, boredom and discriminations. It is, of course, an outlet for genuine mysticism and religious feeling in Brazil, as well as a social institution of large possibilities for future good in combating misery, disease, and illiteracy

* * * * *

NEGRO PAN-AMERICANISM

From the viewpoint of Brazilian Negroes, it would be advantageous for American teachers and medical missionaries to work among them. Inter-American relations should be cemented between Negroes. A first step could be in our colored churches and colleges. The need for doctors and teachers is great in our own South But if a good start were made in sending a few as emissaries of good neighborliness, support might be obtained from the Rosenwald, Rockefeller, and other foundations and even from our Government's inter-American program to help train young men and women. This would be no one-way process, however. Americans have much to offer Brazilian Negroes and, in turn, have so much to learn from Brazil in how diverse races and cultures can live together in harmony and contribute jointly to the development of a new civilization rich in its production of the arts and the things of the spirit.

THE CATHOLIC CONTRIBUTION

American Catholicism has a contribution to make to the Negro in both lands. How splendid it would be for Brazilian-American understanding if dozens of Afro-Brazilian candidates for the priesthood and teaching orders could study in our excellent Catholic colleges and seminaries. They could teach us much and return to Brazil able to spread good will between the two largest American nations. American Catholicism might then gain a larger following here among Negroes. It might be very good for both Protestantism and Catholicism throughout the New World to engage in friendly and constructive rivalry for religious, educational, and social betterment. Certainly the Negro would benefit.

THE GREATEST LATIN NATION

History is not clear as to the extent in ancient times of racial and cultural blending comparable to that among the 40,000,000 Brazilians. But it is probable that in the ancient high cultures of Egypt and the Mediterranean Basin, and possibly in Asia, that Negro vigor and creativeness were major factors. Brazil is now the largest part-Negro nation, and may shortly be the greatest and most populous land of Latin culture as France and Italy follow Spain into post-war decay. In Brazil's new synthesis of culture, the contribution of the Negro is very great and carries vast promise of a rich flowering of civilization in the Americas.

BOOKS ON BRAZIL'S NEGROES

Probably the best volume in English is the Negro in Brazil, by Arthur Ramos, translated by Richard Pattee of our Department of State, and published in Washington by the Associated Publishers, in 1939. Dr. Pattee contributed a fine foreword. The brief bibliography is good. Dr. Ramos' numerous volumes in Portuguese are to be strongly recommended. He is a foremost living authority and is still actively productive.

This is also true of Gilberto Freyre, eminent Brazilian sociologist and former student of Prof. Franz Boas. Professor Freyre edited a splendid series of scholarly studies on race and culture in Brazil. His own monumental works richly deserve to be translated into English. Their publication here would be a signal contribution to United States-Brazilian understanding. Dr. Freyre's study of the great house and slave quarters and the vast influence of the Negro in the plantation region of Brazil's northeast has gone into several editions under the title "Casa Grande e Senzala." Northeast Brazil has produced many other works on the Negro which might be published in the United States in translation as part of the program of the Office of Coordination of Inter-American Affairs. These works are cited in the books of Ramos and Freyre. Nearly all of them as Brazilian classics have been republished by the great Brazilian publishing house, Companhia Editora Nacional, of Rio de Janeiro and São Paulo. The Nazis for years have paid tribute to Brazilian scholarship by publishing Brazilian classics in German. Brazil is our best friend in Latin America and the United States should at least equal if not surpass the Germans through a publishing program both private and governmental.

Data on the Negro in Brazil appears in recent articles and books by the following North Americans: S. H. Lowrie, D. Pierson, L. Hanke, D. Holdridge, R. Pattee, A. O'Neill, D. Aikman, E. P. Hanson, H. Gibson, B. W. Diffie, S. Putnam, M. W. Williams, A. K. Manchester, C. H. Haring, P. A Martin, O Schmieder, H. G. James, R. Nash, J. F. Normano, C. Beals, M. J. Herskovits, R. Bilden, J. Brunk, and most recently Vera Kelsey and W. E. B. Du Bois.

ROY NASH ON BRAZIL

Among North Americans, one of the most creative and original thinkers on the Negro contribution to the historical development of Brazil and the New World is Roy Nash. Although written in Brazil during extensive studies and travels there in the early 1920's, his Conquest of Brazil will be useful and stimulating for decades to come. Roy Nash has a deep knowledge of non-Caucasian cultures and peoples gained from residence and shrewd observation in the Philippines, from service with American Negro troops in France in 1918 and through active participation in the N. A. A. C. P. after the World War. His interest in the rich history and culture of the Negro in the Americas is deep. For some years, Mr. Nash was with the Indian Service in California. The Conquest of Brazil is so important that it merits republication with additional chapters and bibliography and notes to bring the story of Brazil's tremendous melting pot down to date. He again traveled widely in Brazil in 1941.

BRAZIL'S NEGRO A. E. F.

Because of its peculiar present-day significance, let me quote a passage from Roy Nash: (In the Brazilian drama of history we) "witness the conscription of an African army of labor and its hurried transport across the Atlantic for the relief of the forces battling against Nature along a front far flung from Pará to Montevideo"; even greater in size and importance than the A. E. F., which in 1918 hastened across the North Atlantic. "The recruiting ground of the African expeditionary force was equally extensive. From Angola they were summoned and the Congo; from Dahomey, Lagos, Old Calabar, and the Central Niger and Hausaland; from Portuguese Guinea and the Gaboon. Far above Stanley Pool the arm of the Portuguese recruiting sergeant reached; even to Mozambique and the region south of the Kunene River on the East Coast. Upon the tribes of the Yoruba, Egba, Jekri, and Sobo they called for contingents. Upon Mandingoes and the Bateke peoples, upon Hottentots and Bushmen as upon the forest dwellers, levies were made. Both Moslem and pagan were listed in class 1-A of the draft boards that opened offices in Wydah and embarked the cohorts for Brazil."

If Carleton Beals ever spends a year in Brazil and studies and describes the Brazilian as fairly and saltily as he does the Negro in Spanish America and the Caribbean, in his superb book America South, the resulting volume should be a landmark.

VERA KELSEY

In 1940 Funk & Wagnalls published one of the best studies of Brazil this reader has yet seen, Vera Kelsey's "Seven Keys to Brazil." Some of the best writing on Brazil is by sociologists and reporters. Vera Kelsey is both. Two sections of her penetrating book dealing with the Negro (pp. 23–29 and 54–62) cannot be too highly praised. Miss Kelsey is now in Brazil, as is Professor Herskovits.

CHARLES ANDERSON GAULD.

WASHINGTON, D. C.

Tribute to Senator George W. Norris

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

POEM BY RICHARD W. HOGUE

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave granted to extend

my remarks, I submit herewith a tribute in verse by Mr. Richard W. Hogue to Senator GEORGE W. NORRIS, of Nebraska.

Senator NORRIS' long service in the Senate and House, and the brilliant record that he has made as a national legislator, stamps him as one of America's outstanding statesmen.

As is well known, he voted against the entry of the United States in the last World War, but realizing as he does the danger to the United States from Adolf Hitler and the totalitarian powers abroad, he has loyally and ably supported the President's foreign policy in the present crisis. He realizes that appeasement will not stop Hitler and that President Roosevelt's foreign policy is the only way to successfully cope with the international situation now prevailing.

Mr. Hogue's poem deals with this phase of Senator NORRIS' views, and I think is worthy of being preserved.

The poem is as follows:

WITNESS AGAINST APPEASEMENT

(To Senator GEORGE W. NORRIS)

They bid me make appeasement with the world today,
Failing to comprehend the source of my stout refusal.
My mind has no natural affinity with the tides of turbulence,
My heart contains no chamber for communing with ill will;
No grimly guarded grudge and no nurtured hope of late revenge
For wrongs unjustly suffered or for rights denied
Seeks release from bondage of internment
Behind the walls of long-compelled repression.
The years have slowly healed all old wounds
And no reminding scars remain.

By inheritance I was bequeathed no antipathy to life,
No germ lay dormant in my blood at birth
Waiting to disseminate disease of discontent
Through childhood cheated of its chance
To unfold in conscious happiness, slowly drained
Of all incentive and capacity for growth
In wisdom gained from creative self-expression.
Hardship, adversity, and loss in later years
Failed to persuade that hope and aspiration
Were doomed to fatal impotence by foreordained defeat.
I hold no exonerating alibi reserved
For final evidence on which to claim reprieve.

Where I have failed, I have failed;
What I have lost, I have forfeited;
What I have gained, I have not gained alone.

Computed by comparison with those acclaimed the fortunate,
No rich material reward and no surcease from striving
Has been mine, won worthily or bestowed by chance.
Reckoned by the common lot of those foredoomed from birth,
Environment-imprisoned, held down by circumstance,
Life has been all too largely generous to me.

Where they have failed, they have not failed;
What they have lost, they have not forfeited;
That little they have won has been sorely earned.

This being so, and because of it,
No self-contained, insensitive complacency
Shall be allowed to paralyze the protest of my heart and will.
I shall be beguiled to no appeasement with a world
That leaves these living millions and millions yet unborn
Unprovided with the liberty to win release,
Shorn of the power to envision ultimate emancipation
From the thralldom of their vast, unrequited wrongs.

Not till these have been made free to live and move
Unbound by chains of tyranny old and new,
Shall I be free,
Or until my falsifying lips consent to praise
The things all honest minds repudiate
Shall I, suborned to terror-stricken truce with tyranny,
Seek to make my peace with a world
Whose shame unpurged and wrongs unrectified
Call to all those who hold human liberty in high esteem
To fortify their faith and energy for its defense,
Prepared anew to make their lives bear witness to the truth
That short of unhindered brotherhood among free men
Never has there been, nor can ever be,
A lasting peace.

—*Richard W. Hogue.*

The South and Food for Freedom

EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

ADDRESS BY HON. CLAUDE R. WICKARD

Mr. PACE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Secretary of Agriculture, Claude R. Wickard, before a meeting of agricultural leaders of the Southern States, in Memphis, Tenn., September 29, 1941:

As I recall it, I first visited Memphis about 4 years ago. I had been with the Agricultural Adjustment Administration about 6 years, but I still felt that I would soon go back to my Indiana farm to take up where I left off in 1933.

Some of my impressions of my first visit to this area still are very clear. I got my first glimpse of your famous Delta and decided that it was rich as they said it was. I had my first experience with southern hospitality also and decided that it too lived up to advance notices.

In these fast-moving days, 4 years seem a long, long time. Four years ago at this time the South had begun to harvest a huge crop of cotton. Somehow our worries over that cotton crop seem unimportant now, just as many of the things we were worrying about a few years ago seem unimportant now.

During the 1930's we talked a lot about threats to the Constitution, freedom, and democracy. That was all talk. In those days we looked on Hitler as a comic-opera figure and poked fun at him and his little mustache. The Nazis and their goosestep seemed ludicrous. But all the time Hitler and the Nazis represented the real threat to the Constitution, to freedom, and to democracy. It took us a long time to wake up to that real threat and longer still to decide to do something about it. But now we are awake, wide awake, and I advise anyone who thinks the United States isn't going to do something about Hitler to see what happens from here on out.

My reference to problems reminded all of you, I know, of a common problem—the farm problem. But that changes along with our other problems.

I have been going about the country recently urging farmers to grow more foodstuffs This is the fourth meeting of the kind I have attended. Yet, it still seems a little strange to be urging farmers to produce more milk, raise more hogs, more chickens, and so on through the list of things we need. Since I have been with the Department a lot of our worry has been what to do with the surplus on hand; not how to get more produced.

As a corn-hog farmer, it seems queer that there isn't too much lard. And raisins! I never thought to see the time when the raisin surplus would be absorbed. It hasn't been so long ago when it seemed that national farm programs might break down because we couldn't keep down production People were calling the Ever-Normal Granary the Ever-Normal Farm Board and it seemed that our very wealth—the ability to produce—would wreck our programs.

All of you know one of the reasons for the change, Adolf Hitler, the would-be world conquerer, and to him goes a lot of the credit for waking us up to the real threat to democracy.

We are asking the farmers of America to grow more food in 1941 than they ever grew before. Why? To help beat Hitler and the Nazis. Or, if you wish to put it another way, we want that food to keep England on her feet. Either answer adds up to the same result. Everything we do to help England we do to help ourselves. This war is our war.

Some people say the President wants to get us into war. Quite the contrary. If the country and the world had listened to the President a few years ago there would have been no war. But we wouldn't listen. After the war began, the President told the country to arm and he told them something else—the consequences of a Nazi victory.

Those consequences mean the encirclement of the United States by the dictators; the destruction of our traditional democratic system—and finally war—a desperate war in which the Axis Powers would have all the advantages.

Now that the majority of our people know what a Hitler victory means there will be no Hitler victory.

Through aid to England, the United States already has prevented a Hitler victory. Not everyone realized it, but American food has been just as valuable to England as American munitions. Without either, Britain could not have continued until now.

Before the war, England depended upon imports for a good portion of her food. The war did not change her dependence, but it has shifted a good part of that dependence to the United States. Danish bacon and Dutch dairy products, for example, were staples on English tables before 1939. Now, they are staples on the tables of the Nazis. From England, one can almost toss rocks onto the continent of Europe, but Europe might be halfway to the moon so far as furnishing food to Britain is concerned. The new order has come and all Europe tightens its belt and bows its back in response to its so-called blessings. The Nazi submarines and planes roam the oceans to destroy ships and lives and property upon the seas. The ships that are left must come and go as quickly as they can. To save precious time, they forsake long hauls to the Southern Hemisphere in favor of the shorter routes to the United States and Canada.

Already we have shipped or bought for England about a half billion dollars' worth of food. Within the next year we expect to ship or buy at least another billion dollars' worth.

The food is getting to them now, and will continue to get to them. We have partially freed the seas of the Nazi menace. Before we have finished the seas will be completely free.

We have promised England this food if she will continue the fight against Hitler. England has told us that she has no intention of quitting, but that she can't go on unless she has food. A furnace doesn't burn without fuel. A man or a nation can't fight without food.

So one big reason why we are here today asking for increased production of vital foods and England's needs. We want 8 percent more dairy products than the record production of 1941. Now, that isn't true. We need much more than that. The 8 percent is what we think we can get. We want more pork, more canned vegetables, more of almost everything except wheat, tobacco, and cotton.

Most of you know why we don't want more wheat, tobacco, and cotton. We'll talk more about these crops in a little while; but, first, I want to talk about some other reasons for increased production of vital foods.

One other reason is the increased demand for foodstuffs in our own country. Factories are going full blast and factory workers have more money to spend for food, and they are spending it. When a man making $5,000 a year or more gets a raise, he isn't likely to spend any more of it for food. He's eating well already. But when a laborer goes back to work or gets a raise, he does spend more of it for food. He buys more eggs, more milk, more pork chops, more of almost everything the farmer has to sell, including cotton goods. What accounts for the record consumption of cotton in the cotton year that ended July 31, 1941? More people were at work and more people at work meant more money spent for cotton goods. I know some of us may get peeved at labor sometimes, but I never had much trouble making a living farming while factories were busy. My troubles—and the troubles of other farmers, too—came when people were walking the streets looking for work.

There's still another big reason for producing more food at this time. Most of Europe is hungry and will get hungrier as time goes on. The Nazis are living fairly well, but they are doing it at the expense of the conquered countries. The sign of the new order is hunger. So long as it exists—and it will grow worse—Hitler can't consolidate his gains. Words won't fill empty stomachs and hungry men are never contented.

Despite his victories, Hitler is desperate. Unless he can find food and oil in huge quantities, his conquests will become liabilities. There will be continued sabotage and revolt among the conquered and a continuing drain upon Nazi nerves and Nazi resources.

Hitler will lose, but famine may be stalking all Europe when he does.

Those hungry people must be fed and we must do our part in feeding. We must do it for humanitarian reasons. And we must do it for practical reasons too.

Since we've got to help clean up this mess, we might as well do a good job of it. It's a little too much to ask the United States to go through this thing every 25 years. This time let's not only win the war, let's win the peace too.

Food, good food, and plenty of it, is one of the best missionaries for democracy that I know. Let's have plenty of it to spread the gospel when the time comes, and let's tell Europe's millions meanwhile that we're ready to help them out once they get rid of the Nazis. That shouldn't make Adolf's task any easier.

A little while ago I told you that we didn't need any more wheat, tobacco, and cotton right now. The reasons you know. We've got huge supplies of these commodities on hand. We have a 2-year supply of wheat and a cotton carry-over in the United States on August 1 of 12,200,000 bales. That is more cotton than we will probably consume and export this year.

The gain in consumption has been more than offset by the loss of exports. This country may export a million bales this year. It isn't likely to export more than 2,000,000 bales. The war has blitzed the export market for cotton and it may stay blitzed a long time.

This country is not withdrawing from the export market for cotton. One of the reasons for stopping Hitler is to keep our export markets. Yet there's no sense in continuing to pile up cotton for a market which may or may not exist after the war. There hasn't been a time since the early day of the depression when we didn't have too much cotton on hand. We still have too much on hand, and in my opinion, there hasn't been a better time than right now to shift some of our acreage from cotton production to other crops.

I say this with full realization that cotton is the principal cash crop of the South and will continue to be for some time to come. To people who tell them to quit growing cotton, southerners ask: "What will we do for a living?" The question is justified, but right now we've got the best answer we've had in years.

The pull of defense industries has eased some of the South's population pressure. Southerners who stayed on the farm because there was nothing else to do now have gone to factories or to the Army. The country needs milk, eggs, and meat a lot worse than it needs cotton. There's a market at good prices for all you can raise of the vital foods needed for the war effort.

In the back of your minds may be the thought that the South, generally speaking, leaves the commercial production of meat, eggs, and milk to other areas; that the South does not have the land or facilities to grow food products as other areas grow them. This is only partially true. We know the South can produce meat, eggs, and milk because it is producing them. The section we call the South is an empire in itself. The possibilities of increased production of foodstuffs in the South is much greater than has generally been realized.

I don't intend to tell you about the need for living at home. The South is steadily increasing its production of food and feed for home use and for sale locally.

But a good deal more needs to be done. A substantial increase in milk, eggs, meat, and other vital foods in the South helps in two ways. It makes for a healthier and happier people and extra food production in the South makes more food available for Britain and for the American people as a whole.

Whatever the future of cotton, I think the South and the country as a whole, for that matter, will produce more foodstuffs. Americans are the best-fed Nation in the world. Yet we aren't any too well fed. People are beginning to realize that health is more than just preventing sickness. A lot of people who think they are well are half sick all the time. We are just beginning to realize that enough of the right kinds of food is necessary for buoyant health, the health needed for vigor and morale. The science of nutrition is going to make great strides within the next few years. Among its contributions will be convincing the country that one of the best ways to preserve democracy is to be certain that our own people have enough good food.

I don't believe we are going to have much trouble utilizing the milk, eggs, and other vital foods we produce from here on out. After the war is over we are going to use most of them right here at home.

The program of production we have planned for 1942 and the years to come raises a number of questions that both farmers and consumers want answered.

Farmers want to know whether they will get fair prices for increased production. They want to know also whether they will be left holding the bag, as they were after the last war.

Consumers want to know what this defense effort means in the way of increased food prices. They are wondering—and so are farmers, for that matter—whether we will have inflation and its inevitable disastrous after effects.

You are aware of the fact that the 85-percent loan and the payments under the program will assure cotton farmers a parity return for 1941 and probably during the period of the emergency.

We've been talking about parity for quite awhile and I think the people responsible for parity have a right to brag a little about reaching it. Of course, the ones primarily responsible are the farmers who built and supported these programs. But they won't mind if some of the bureaucrats join in the boasting. I think all of us should take time out at this point to say this farm program of ours is the best farm program any nation ever gave its farmers.

So far as prices for hogs, eggs, and other foods are concerned, we also have protection for prices and income. This feature is brand new. It was added to the bill which this year increased the lending power of the Commodity Credit Corporation. The legislation says that whenever the Secretary of Agriculture finds it necessary to encourage increased production of a nonbasic commodity, he shall issue a public notice to that effect, and then within the limits of available funds, support a farm price for the commodity of not less than 85 percent of parity. Furthermore, if conditions change, the price is to be supported until producers have had time to readjust to changed conditions; or, to put it another way, until they have had time to get out from under.

I have already given public notice that expansion is required in the production of hogs, eggs, evaporated milk, dry skim milk, cheese, and chickens. I shall amend the notice to cover other commodities if that becomes necessary.

I think this new law is splendid. It is one more evidence that the Congress (reflecting the wishes of the American public) wants to play fair with the American farmer. When the public calls on farmers to expand agriculture the public is willing to see that farmers aren' penalized for serving the national interest. In return farmers or the great majority of them, are eager to produce abundantly. Farmers don't want high prices—they want fair prices. They don't want inflation, for they know that farm prices stay up only a short time, but other prices stay up long after farm prices have sunk to rock bottom.

To consumers, let me say this: The only effective guaranty against high prices and inflation for farm products is abundant production. As I have said, farmers want to produce abundantly. They can't do the job, however, unless they get fair prices for the things they raise. If farmers get fair prices and if we get the production we are seeking, I have no fear of high prices for foods or other things that come off the farm.

I've talked at length about the job we want done and very little about the way we intend to do it. I may be wrong, but I don't think we need to dwell on that here in the South. We have organized U. S. D. A. defense boards to help coordinate the production effort. I am certain that every agricultural agency involved will do its part and more in this campaign to produce for the defense of democracy.

More clearly than any other section, perhaps, the South knows the issues involved in this struggle. The South knows that first

things come first. The first thing before the farmers of the South and the entire Nation is winning this war. I know southern farmers and the South will do whatever is necessary to crush the Nazi threat to democracy and civilization.

I am confident the war will be won. I am confident that a better and more secure world order will emerge after the war is won. I have faith in democracy. I have faith in the strength and courage of the American people. And I have faith in that great leader of democracy—Franklin Delano Roosevelt.

National Unity

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

EDITORIAL FROM BRAINERD (MINN.) JOURNAL PRESS

Mr. KNUTSON. Mr. Speaker, under leave granted I desire to have inserted in the Appendix of the RECORD a very timely editorial from the Brainerd (Minn.) Journal Press. The editorial follows:

[From the Brainerd (Minn.) Journal Press]

During these high-pressure times one hears a great deal about "national unity," aptly explained by the metaphor: "When there s a fire, there should be no dissension among the fire fighters, and so forth, and so forth." By which, no doubt, it is implied that none of us should question the motives, the good intentions, the sincerity or sanity of what is happening in this country in the name of national defense.

Maybe so, but——

Back home we once had a fire chief who used to be the whole show whenever the fire bell rang. It didn't matter whether the emergency was a roast burning in somebody's oven or a three-alarm fire; he was always the center of attraction. Bug-eyed and crimson of face, he would bellow incoherent orders that could be heard for miles and scare the populace half out of their senses. Before the fear-crazed villagers knew what they were doing, most of the property in the neighborhood would be desolated almost as bad as the house visited by the fire. Pictures would be torn from the walls, lace curtains from the windows, carpets from the floors, windows smashed and furniture thrown out of them, and the whole neighborhood thrown into utmost confusion.

Of course some people criticized the chief's methods—but not to his face. Hadn't he made fire-fighting a life study? Hadn't he been given full authority to act under any emergency? Nobody could tell him what to do.

One night the feed stable back of the hotel went up in smoke. The shell-like structure made a most spectacular blaze and the chief, as usual, was in his glory. "The hotel's next! Nothing can save it! Save the furniture! Save the bedding! Don't stand there like fools! Save the furniture!" The hotel entrance, however, was barred by its grimly determined proprietor, armed with a shotgun. "There'll be no messing up my property," he said.

The hotel didn't burn down, but its proprietor was roundly condemned by the chief for obstructing him in the performance of his duty.

Back to the subject of national unity: In times of stress all people should look in the same direction in the matter of national security; but, thank God, there are a few men in this country calm and sensible enough and endowed with intestinal fortitude to tell the big chief and all his frenzied lesser lights to keep their shirts on.

Fresno (Calif.) Bee on St. Lawrence Project

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

EDITORIAL FROM THE FRESNO (CALIF.) BEE

Mr. VOORHIS of California. Mr. Speaker, from my own State, and from one of our best newspapers, comes the following editorial on the St. Lawrence project which I am glad to include with my remarks:

[From the Fresno (Calif.) Bee of September 8, 1941]

"SOCIALISTIC" TAG IS NOT FRIGHTENING TO PEOPLE

How some people stick to the old scarecrows.

For example, the Transportation Association of America, representing some of the major railroads of the country, is denouncing as socialistic the proposal to improve the channel of the St. Lawrence River and provide huge amounts of additional power for the national-defense program.

And, oddly enough, it apparently thinks that label is going to frighten sober and sound-thinking Americans.

These too well recall the record.

They remember that the Government's construction of the Panama Canal was so denounced by those who perhaps had the same selfish reason for opposing its construction.

They remember the Tennessee Valley Authority and how the monopolistic power interests tried to attach the same tag to it. Yet it has proved to be one of the most beneficial projects ever undertaken by any American administration. T. V. A power has brought not only inestimable blessings to hundreds of thousands of consumers, but had it not been available, the national-defense production of aluminum would have been shackled far worse than it actually is today.

Boulder Dam likewise was fearfully socialistic, but what private company could or ever would have undertaken its construction?

And even our Central Valleys project has been put in the same category by those who think it is a crime for a government to do anything which will interfere with the vested interests 'n which perhaps they own stocks and bonds.

Socialistic, indeed.

The opposition to the St. Lawrence project must be at a loss for good and sufficient reason to support their stand when they find themselves forced to trot out such a long-whiskered bugaboo.

Protection Against Inflation

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

LETTER BY ROBERT P. VANDERPOEL

Mr. THOMAS F. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter by Mr. Robert P. Vanderpoel, financial editor of the Chicago Herald-American:

(By Robert P. Vanderpoel, Financial Editor, Chicago Herald-American)

I should like to write a personal letter to every man and woman in the United States who—

1. Owns a life-insurance policy.
2. Is the beneficiary of an insurance policy.
3. Has a savings account in the bank.
4. Has a postal-savings account.
5. Owns or is the beneficiary of an annuity.
6. Contributes to a pension fund.
7. Depends upon a pension to meet living costs or a portion thereof.
8. Owns defense bonds, defense stamps, or Government securities of any kind.
9. Owns any State, municipal, or corporate bond, debenture, or notes.
10. Possesses any preferred stock.
11. Works for a salary or wage which it is difficult to adjust promptly and repeatedly.
12. Receives an income from any trust or estate.

It will be seen that this letter would go to almost every man and woman in the United States.

THE LETTER

It would read as follows:

"DEAR SIR OR MADAM: Your stake in America is being pared. The funds which you have worked so hard to save or for which loved ones have sacrificed for your protection are threatened. Each day they are becoming worth less. You must look to Congress for protection.

"Inflation, one of the scourges of mankind, is on the loose. There are measures before Congress which, if enacted promptly, could control this menace. Write to your Senators, write to your Congressmen, demanding that immediate, effective action be taken to stabilize prices, wages, and rents.

"There are good ways and bad ways for accomplishing this end. Even the worst ways are greatly to be preferred to unbridled inflation.

"There are those who hope that they could beat the game.

"Some farmers hope that because they did not receive a fair share of the national income for some years it will now be possible for them to live fat off the rest of the country.

"Some workers and their leaders hope that because skilled workmen are now desperately needed they will be able to secure fabulous rewards for their services.

"Some owners of real estate, starved through long years of inadequate returns on their investment, are hoping that they will be able to hit the jackpot.

"Some businessmen, still smarting under the lean years of the last decade, are hoping that nothing will be done to restrain what they now regard as great opportunities to cash in on Aladdin-like rewards of the profit system.

"TO CERTAIN DISASTER

"To all of these I say, 'You are crying for the moon, reaching for the stars. Get your feet on earth. A stabilized economy offers rich rewards. The seeming prizes of inflation will prove but mirages, carrying you on and on and on—to certain disaster.'

"So, demand of your Senators and Congressmen action now which will protect you and those for whom you have sacrificed."

I cannot write to every man and woman in the United States, but I wish that every reader of this column would communicate with his Senators and Congressmen, and I should be glad to receive copies or carbons of letters that are sent.

A Poetic Reaction to War

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

POEM BY ALFRED LOCKWOOD

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an epic poem, composed by Mr. Alfred Lockwood, a resident of the city of Seattle in my State of Washington, in which the poet gives his view of war, its causes, its distresses, its horrendous aspects and its inevitable sequel. Mr. Lockwood has many friends who would be interested in having this poem put in the columns of the CONGRESSIONAL RECORD, and it is at their request that I am seeking this privilege. I will let the poem speak for itself as a persuasive, moving and telling disquisition on the most gripping topic in the world today—war and peace.

A DELUGE OF BLOOD—THREE VIEWS OF WAR, FEBRUARY 1941

PICTURE I

A dark ominous craft
Is appearing abaft,
  And it's nearly abeam;
It is loaded with graft,
  And a star-chamber scheme.

It will follow a line
Which the past can define,
  And the present conceive;
And will be the design
  Its promoters achieve.

It will follow the course
Of a violent force;
  Flowing rivers of blood
From the only resource
  That can redden the flood.

And the only supply
Which the cunning and sly
  Can coerce or conscript,
Is the youthful and spry,
  They have always equipped.

And each youth is the pride
Of a mother or bride,
  That must linger behind,
And in patience abide,
  Through a war undefined.

And the rally and surge,
As the forces converge
  On a fortress or town,
Will encourage the urge
  To win bloody renown.

And the blood that will flow
Will yield nothing but woe,
  To replace the deceased;
And the flies, and the crow,
  And the vulture will feast.

And this tragic red stain
Will assure us no gain,
  Though we win in each clime;
And the men that are slain
  Will have died for a crime.

Will have died to atone
For a crime not their own,
  But a crime against them;
And it surely is known
  Who we have to condemn.

And the men that are maimed
Will be saddened and lamed
  All the rest of their days,
Which is properly blamed
  On a trade-hungry craze.

And the injured that come,
With a splinter of bomb,
  Or a lung full of gas,
May receive but a crumb,
  Till life's miseries pass.

And those coming, unhurt,
From the slaughter and dirt,
  May be greatly annoyed
When they have to revert
  To the massed unemployed.

And the folk that stay here,
Away back in the rear,
  Will be worried some, too,
As high prices appear,
  With excuses untrue.

And the liberty lost
Is a part of the cost
  That we people will feel;
Like a man double-crossed,
  In a treacherous deal.

PICTURE II

Our picture, number one,
Shows the fighting is done
  By the youngsters of toil;
Not the plotting old Hun
  That inspires the turmoil.

In picture number two,
Is the cold-blooded crew
  That fosters the strife;
But is never in view
  When there's danger to life.

And a soldier's distress,
In the bloodiest mess,
  Never moistens their eyes;
While retaining access
  To whatever they prize.

And remote from the fray,
They will frolic and play,
  As if nothing were wrong;
Where their strenuous day,
  Is not weary and long.

And their tongues will not parch,
In the course of a march,
  Through the blistering heat,
That would melt all the starch
  From their collars, so neat.

And the strain and the stress
Of a soldier's duress
  Will annoy none of these,
Who are free to recess,
  And recline at their ease.

And the snow and the rain
Will occasion no pain
  To these favored marplots,
Whose fine shelters remain
  In the safest of spots.

And the only alloy
Interrupting their joy,
  Is the time they must use,
On the schemes they employ,
  To corrupt and confuse.

For they make it appear
That the high financier
  Plays a prominent role,
As a tall musketeer,
  Of the dollar patrol.

And a glorious part,
On the bond-shaving mart,
  He undoubtedly plays;
But the strife will not start,
  Within range of his gaze.

For, no truculent storm
Shall disfigure the form,
  Or the face of their kind;
And their features will warm,
  Where the marplots are dined.

And the power they acquire
Will ascend ever higher,
  As the war rages on;
Until truth can retire
  The acquisitive spawn.

And no sign of a blush
Will develop a flush
  In their impudent cheeks,
While the profits still rush
  To their vulturine beaks.

And humanity's gore
Will discolor our shore
  Until something is done
To decipher the score
  And dismantle the gun.

PICTURE III

Our pictures, one and two,
Have shown the bitter brew
  Of warfare's dire distress;
And placed the credit, due
  To those it serves to bless.

And picture number three,
Will guess, in some degree,
  The likely aftermath;
And what the score will be,
  Beyond the purple bath.

When the war is at end,
And ex-warriors descend
  On their own native land,
Which they served to defend,
  Should they make some demand?

Might they ask some return,
And display some concern
  In their homeland affairs,
And endeavor to learn
  What percentage is theirs?

Will their needs be supplied,
And no justice denied,
  When their purses cave in;
And the ex-warrior tide
  May begin to feel thin?

Will the future look bright,
With a life of delight,
  Looming clearly ahead;
To replace the grim sight
  Of the injured and dead?

Will they get a New Deal,
With the pleasing appeal;
  Of a full recompense,
Under government seal,
  For the men of defense?

Or will the men that fought,
Be distressed and distraught,
  By the clubs of police;
Like the bonus men caught,
  Through a Hoover caprice?

Will they bow to a frown
And be browbeaten down?
  Or contend for their own,
And partition the town,
  Dispossessing the drone?

These new ex-service boys
May display ample poise,
  And we others may help;
And our unified noise
  May alarm every whelp.

Or it may be a fright,
For the bosses may fight,
To their last fawning fink;
Through a hideous blight,
To hell's titular brink.

And they have to be watched,
For their guns are well notched,
Where they number their kill;
And if they are not scotched,
We can look for a spill.

And the venom and spleen,
We have felt and have seen;
As they used it before
In their tear-gas machine,
May assail us once more.

But another tough loss,
In a tilt with the boss,
Is less apt to occur;
Since his butterfly gloss
Is beginning to blur.

And the worst of mankind
Is not totally blind,
And all infamous wares;
Are so clearly outlined,
That the vile may see theirs.

And no man, unless mad,
Can be utterly bad;
But the lack of a chance
Is the part that is sad,
In our halted advance.

But mankind should move on,
With no effort withdrawn,
And no bent to look back;
But with eye on the dawn,
That displaces the black.

And today's profiteer,
With his insolent leer,
Could be greatly improved;
Were his conscience made clear,
By a fortune removed.

Missouri Endorses Arkansas Valley Authority

EXTENSION OF REMARKS
OF
HON. CLYDE T. ELLIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

RESOLUTION OF CITIZENS OF SOUTHERN MISSOURI

Mr. ELLIS. Mr. Speaker, a representative group of people in the Ozarks region of Southern Missouri recently endorsed unanimously the pending Arkansas Valley Authority bill. Herewith, I insert their resolution in full.

AN ENDORSEMENT OF ARKANSAS VALLEY AUTHORITY

Be it resolved, That the members of this convention, composed of more than 5,000 adult citizens of south Missouri and north Arkansas, assembled in the Ozarks region at Branson, Mo., on Lake Taneycomo, September 14, 1941, acting for themselves and in behalf of other persons within the States of Arkansas, Colorado, Kansas, Louisiana, Missouri, Oklahoma, New Mexico, and Texas who may later wish to join with us, form an association to be known by and bear the name of the Southwestern Water Resources Association. The object and purpose of the organization shall be to aid in the further development of the great natural resources in the territory between the Mississippi and Rio Grande Rivers. To that end, the association shall bring to the attention of the President, the Congress, the National Resources Planning Board, the Federal Power Commission, and the public officials and people of the States within this great area, these basic facts.

First, that the rivers, including the Arkansas, Red, St. Francis, and White, afford opportunities for limitless development in navigation, irrigation, flood control, soil erosion, forest and wildlife conservation, and power production.

Second, that of the minerals, both metallic and nonmetallic, there is greater variety and, in many instances, larger quantities here than can be found in any similar area in the country.

Third, that within the limits of these eight States there exists more oil and natural gas than in all of the other States combined.

Fourth, that within these eight States there is produced a greater variety of farm crops and a higher percentage of farm surplus than in any other like region in the United States.

Fifth, that the timber resources are large and the quantity grown equal to any produced in other sections of the country.

Sixth, that animal husbandry, the mainstay of American rural life, is carried on as extensively here as in any other section east or west.

That notwithstanding the superior natural advantages of this great domain and the improvement thus far made, the means of converting raw materials into the finished product are meager. As a result the economy is not in balance and inevitably a low level of per capita income exists.

That the thing we most need is to promote among our own people industrial enterprises adequate to the needs. This is an impossible task without a dependable supply of electric energy at low cost. The water resources of the region are ample if properly harnessed to supply low-cost power for industries large enough to utilize the raw products available. Our soil is fertile, moisture ample, climatic conditions good, transportation sufficient, intelligent and efficient labor abundant. But even so, without low-cost power industry cannot prosper. To equalize an unbalanced economy, the water resources of these southwestern States must be utilized. We believe that the best method of attaining this end is to group these eight States together as a unit and develop the water resources as a whole. To that end we invite the cooperation and support of the National Government, the State government, and the citizenship at large.

Therefore be it resolved, That this convention approve, endorse, and recommend to the Congress of the United States the early consideration of the bill now pending in the House and Senate or a similar bill creating the Arkansas Valley Authority and the passage and approval of said act during the present session of Congress.

Adopted by a unanimous vote of the convention at Branson, Mo., September 14, 1941.

REV. J. E. CHASE,
Chairman.

Attest:

EVELYN W. RUNYON,
Secretary.

International Constitutional Law

EXTENSION OF REMARKS
OF
HON. JAMES M. TUNNELL
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Thursday, October 2, 1941

ADDRESS BY AMOS J. PEASLEE

Mr. TUNNELL. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an address by Amos J. Peaslee, of the New York Bar, before the American Society of International Law.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INTERNATIONAL CONSTITUTIONAL LAW[1]

(By Amos J. Peaslee of the New York Bar)

This topic appears on the agenda of the annual meeting of our society for the first time in the 35 years of its history. It brings us face to face with several basic questions:

Does the Society of Nations exist as a political entity?

Have we already, in a sense, a super sovereignty—a system of world government superior to the will of any single nation?

Is there such a thing as an international constitution? If so, what sort of an instrument is it? What does it provide? What does it lack?

It would be easy to spend the evening discussing definitions of terms. Rather than to become involved in that, I propose to recall certain of the factual phenomena which have appeared during the past 300 years of the world's history, and let you answer the questions according to your own choice of language.

THE INTERNATIONAL BODY POLITIC AND BILL OF RIGHTS

It is fruitless to embark on these speculations without considering at the outset the gravity of the present challenge to international government and to international law. Let no one underestimate the extent of that challenge. Germany's war aims go far beyond the destruction of the Treaty of Versailles of 1919. They are directed at the Peace of Westphalia of 1648, which gave birth to the modern concept of a society of free nations.

Germany's war is a revolution—a civil war—against world government, as we know it.

To those who urge that the existing international situation proves that such a government does not exist, my reply is that it proves precisely the opposite. The "hue and cry" is rising today, just as it did in the three years following August 1914. Sooner or later—whether it requires 3 years or 30—it will swing the will and the might of most of the civilized nations of the world to enforce the cardinal concept that there is a right to live at peace with, and to be free from brutal attacks by, other nations.

That passion to live and let live and to be free is as prevalent among our South and Central American neighbors as it is among our English-speaking cousins. It is to be

[1] Address before the American Society of International Law, Washington, D. C., Friday evening, April 25, 1941.

found, with a few unfortunate exceptions, in every corner of the globe.

If democracy were confined—as some of our present day philosophers tell us—to only about 15 of the 64 (more or less) nations of the world, or to 6 nations, or to our own Nation alone, we would view with great alarm the possible outcome of this challenge. But there is no justification for so limited a definition of the democracies, either in the constitutions of the nations or in their governmental operations. About 95 percent of the 64 nations possessed in 1939 written constitutions providing for a form of government very similar to our own. Over half of those constitutions had been adopted since 1920 and about a quarter since 1930. With rare exceptions each contained a bill of rights guaranteeing liberty and equality of the individual, freedom of speech, freedom of the press, freedom of thought and conscience, and guaranties against arbitrary powers of the State.

If democratic institutions and free thought and free speech have proved anything within the span of a single generation, they have demonstrated that there are underlying conceptions which are common to the minds of most men—that friendliness and neighborliness, and justice are predominant instincts among 90 percent of the people of the world.

The American Institute of International Law at its first session in 1916 adopted what it described as a "declaration of the rights and duties of the nations." That declaration enumerated five fundamental national rights—

1. The "right to exist and to protect and to conserve its existence," but not "by the commission of unlawful acts against innocent and unoffending states."

2. The right of "independence" and the "pursuit of hapiness" and the right "to develop itself" with due regard to the rights of other states.

3. The right to equality before the law and before other nations.

4. The right to exercise "exclusive jurisdiction over its territory and all persons, whether native or foreign, found therein."

5. The right to have its rights "respected and protected by all other nations;" for, said the institute, "right and duty are correlative and the right of one is the duty of all to observe." [1]

World government is not synonymous with universal peace. Man has outlawed crime in municipal law but he has not abolished it. Better world government will not soon, if ever, mean a state of perfect peace, but it will mean the discarding in the law of nations of many concepts held a generation ago of unrestricted national rights.

The vigor of the fiction that neutrality and isolation are possibilities when international crime develops on a wholesale scale, are evidence of the indignant demand of each nation that it has the right to be let alone.

Mr. Root in his presidential address to this society in 1908 called attention to the fact that the first public national act in the New World of the Western Hemisphere, as found in our Declaration of Independence, was an appeal to the "decent respect for the opinions of mankind."

One of our human peculiarities is that we seem to require a common antagonist in order to combine effectively for a common purpose. I have sometimes thought that the organization of the Society of Nations has been retarded because it is an all inclusive concept. Perhaps the assaults against free nations which were launched in 1914, and again with intensified fury in 1939, have had at least one use. They have proved that without effective world government no individual nation can be assured of the enjoyment of its basic rights, or even of its independent existence.

LEGISLATIVE ORGANS OF THE SOCIETY OF NATIONS

In the field of international legislation up to the present time law making processes have differed basically from those of national governments. There is not and never has been a congress or parliament of the nations or of any considerable number of them, to which the nations have delegated legislative power.

The phenomenon of international relations which most closely resembles a national legislature is the international conference. Some conferences have been occasional, such as the Hague Conferences of 1899 and 1907, the London Naval Conference of 1908–9, the Versailles Conference of 1918–19, the Washington Disarmament Conference of 1921–22, the "Conference for the Progressive Codification of International Law" held at The Hague in 1930, the "Inter-American Conference for the Maintenance of Peace" held at Buenos Aires in 1936, and—in earlier times—the Congress of Vienna of 1815, and the "European Congress of Catholic and Protestant States" of 1644–48. Other international conferences have been periodic or more or less permanent in their character, such as the Sessions of the Assembly and Council of the League of Nations and the eight periodic "International Conferences of the American States" held from 1887 to 1938.

But whether periodic or permanent, international conferences have never assumed to exercise the final sovereign powers of a legislature.

They merely draft and propose measures. The measures become effective when, and only to the extent that, they are ratified by the nations represented at the conferences.

International legislation is, of course, not limited to the products of international conferences. Many multipartite treaties partaking of the nature of legislation have been negotiated entirely through diplomatic channels. Some conventions, such as the one providing for the creation of the Permanent Court of International Justice, are described within their own terms as "statutes."

If we go as far as Judge Hudson [2] we should place in the category of international legislation some 257 conventions, treaties, protocols, declarations, acts, or agreements signed during the 50 years preceding 1914, and not less than 400 which were signed during the 20 subsequent years. Personally I should describe some of the documents which Judge Hudson terms "legislation" as being more in the nature of contracts. Many of them, however, undoubtedly belong to the field of legislation.

Some conception of the rate at which international legislation is now being ground out, is to be gathered by recalling that at the single Seventh International Conference of American States, held at Montevideo in 1933, 95 resolutions, 6 conventions, and 1 protocol were adopted, and at the Special Inter-American Conference for the Maintenance of Peace, at Buenos Aires in 1936, 11 treaties and conventions were signed, all of which were in the nature of legislative acts.

Crisscrossing among the nations there is a vast network of legislative documents which are becoming ever more important in the relations of the nations and somewhat appalling in their increasing complexity.

Finally, in contemplating the field of international legislation we should recall the progress which has been made toward codification of international law. The work in the Western Hemisphere which began by the appointment of the commission of jurists at the Rio Conference of the American States in 1906 finally ripened into the creation of the committee of experts which held its first meeting at the Pan American Union in April 1937. The League of Nations Assembly and Council, as you know, provided in 1924 for the creation of a committee for the progressive codification of international law. At the first international conference which met at The Hague in March and April 1930 under the inspiration of that committee, 48 states were represented. The draft conventions prepared by the Harvard research experts trace their roots to that committee and that conference.

The most serious handicap which confronts any effort to codify or improve international law is the cumbersome existing machinery for accomplishing international legislation. We know the difficulties experienced by the Assembly of the League of Nations under the principle of unanimous consent, and of its efforts to avoid or circumvent that principle in procedural measures. International legislation will continue to be lacking in simplicity of enactment and will always be of scattered geographical application unless and until the nations are willing to delegate to permanent representatives actual legislative powers.

JUDICIAL ORGANS OF THE SOCIETY OF NATIONS

This audience is far too familiar with international judicial organs to warrant even a summary review of them as they function today. The judicial department of the constitution of the society of nations—if we may employ that term—is, as we should expect, more mature than its legislative department, for, as we know, the development of law by custom and through arbiters and judges has almost always preceded legislation chronologically in the evolution of governmental organisms.

The Permanent Court of International Justice within the past two decades has become a functioning and living body. The Mixed Arbitral Tribunals in Europe and the German and Mexican Mixed Claims Commission operating in the Western Hemisphere since 1919, dealt with a volume of cases surpassing both in number and importance anything hitherto known in the history of international arbitrations. The Mixed Claims Commission, United States and Germany, alone handled over 15,000 separate cases. Several of its single cases or groups of cases involved larger sums and graver issues than the entire Alabama arbitration or any other single arbitration to which the United States had previously been a party.

Not less than 130 [4] separate conciliation, arbitration, or compulsory adjudication treaties were signed by nations during the single decade which followed the conclusion of the last war, in addition to such general conventions as the Geneva Protocol of October 2, 1924, the general act for the pacific settlement of international disputes of September 26, 1928, and the inter-American treaties of conciliation and arbitration signed at Washington on January 5, 1929.

Six separate drafts of projects for the establishment of an inter-American court of international justice, submitted to several of the international conferences of the American states from 1923 to 1936, have been made the subject of a study and report by the governing board of the Pan American Union.[5]

[1] See the Recommendations of Habana Concerning International Organization, Scott, Oxford University Press, 1917, pp. 22, 67; and U. S. Supreme Court cases there cited.

[2] International Legislation From 1919 to 1934, Hudson.

[4] For list of these see Post-War Treaties for the Pacific Settlement of International Disputes, Habicht, Cambridge University Press, 1931.

Useful as these and other developments of international judicial organs have been, they are, with few exceptions, still haphazard in their character. At the Versailles Conference in 1919 I was bold enough to suggest[6] that, in addition to provision for a World Court in the Covenant of the League of Nations (whose first draft lacked any such provision), authority should be granted for the creation from time to time of inferior courts—much in the same manner as our United States Federal courts were established—in order ultimately to create a permanent unified international judicial system.

EXECUTIVE AND ADMINISTRATIVE ORGANS OF THE SOCIETY OF NATIONS

Any supersovereign executive power for the Secretariat of the League of Nations was repeatedly disclaimed when the League was founded, and from time to time thereafter.

The Governing Board of the Pan American Union also shrinks from admitting any executive powers among the nations of the Western Hemisphere. You will recall that at the Buenos Aires Inter-American Conference for the Maintenance of Peace in 1936, attended by President Roosevelt, a resolution was adopted recommending extension of the scope of the work of the Pan American Union. On January 3, 1938, the Governing Board approved a comprehensive committee report which said:[7]

"It was the thought of the founders of the Union that through such cooperation an international atmosphere would be created in which any disputes that might arise would lend themselves to orderly settlement, through mediation, conciliation, or arbitration. It is true that at successive international conferences of American states an elaborate mechanism for the maintenance of peace has been developed, but the organs for this purpose are not integral parts of the Pan American Union, but may be said to run parallel to it * * *."

Since the Pan American Union traces its origin to a section of the State Department of the United States Government, and since its governing board still consists of diplomatic representatives of the 21 nations of the Western Hemisphere resident at Washington, D. C., it is easy to understand why, for these reasons alone, it would hesitate to admit that its functions are executive in any supersovereign sense. The report approved by the Governing Board refers, however, to "an elaborate mechanism for the maintenance of peace," which runs "parallel to" the functioning of the Pan American Union.

Whatever terminology we may employ as to the functions of the Pan American Union or of the Secretariat of the League of Nations, we certainly find not only within those bodies but also within a great many other international organs many of the attributes of administrative and executive institutions. The Bureau of Universal Postal Union has long been a most valuable organ of that character. So have the International Telegraphic Bureau, founded in 1868; the Bureau for the Protection of Industrial Property, founded in 1883; the Union for Protection of Literary and Artistic Property, created in 1888; and various boundary commissions, plebiscite commissions, commissions for the control of navigable rivers, and commissions dealing with air navigation. At one single American conference—the Seventh International Conference of American States at Montevideo in 1935—eight international commissions were created.

How far it is to the interest of the nations to continue to disclaim any super-sovereign attributes for these various agencies may be open to question.

CONCLUSION

What then are your answers to the questions which this topic has raised? Is there already an unwritten constitution of the society of nations?

Whatever your answers may be, we must face frankly the fact that such government as the society of nations now possesses has proved inadequate to preserve peace and order and to guarantee the rights of the nations. The constitution of the society of nations at best is an infant organism which has not developed the immunity to disease or the vigor which we shall expect of it in its riper maturity.

It is not the province of the American Society of International Law to attempt to state any "war aims" or "peace aims." We may observe, however, that rapidly changing social customs inevitably demand changing institutions. The nations of the world during the past few decades have become vast economic organisms. They require, if complete chaos is to be avoided, far more effective instrumentalities of international government than now exist. Such organs must be financially self-supporting. They should be all embracing in their concept. With 300 years of failure of mere alliances and associations, and with the experience of two world wars in a single generation costing[8] per day in money alone more than what should be the normal cost per year of effective organs of international government, we can afford to take daring risks.

As our beloved Chief Justice in his presidential address to this society 12 years ago said:

"The building of the institutions of peace is the most distinctive enterprise of our time. * * * The difficulties do not make the task any the less the supreme task of modern civilization. * * * We shall have to build and rebuild and then mayhap, to build again, but the construction process must go on."

Labor Day Address by Senator Bunker at Las Vegas, Nev.

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ADDRESS OF HON. BERKELEY L. BUNKER, OF NEVADA

Mr. BARKLEY. Mr. President, I ask unanimous consent that there be printed in the RECORD the very able address delivered by the Senator from Nevada [Mr. BUNKER] on Labor Day at Las Vegas, Nev.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A few days ago I left the most interesting and important city in the world. Interesting because of the unusual individuals and personalities that make up the everyday life of this city. They come as actors from America and from the world to play their roles in the great tragedy humanity is experiencing today. Important because the decisions that are being made there are vital and will ultimately shape the destiny of civilization.

In the light of world conditions, this meeting tonight is a tribute to democracy. There are few nations left in the world today where representatives of organized labor can convene without fear, threat, or molestation. No occasion such as this could be celebrated in any totalitarian state. The organized labor movement in Germany, which was one of the most effective and best led, was annihilated in a single day by Hitler, and in turn a number of the outstanding leaders were assassinated.

In the countries which have been ground under the ruthless savagery of Hitler's legions trade-unionism has ceased to function. Hundreds of thousands of those who but a few months ago were protecting their rights as wage earners through their trade-unions are now prisoners of war, compelled to work for Germany under such conditions as a brutal, arrogant director imposes; compelled to work in the production of war material to be used for the purpose of dealing a death blow, if Hitler can have his way, to the free institutions of the parliamentary governed countries.

This is in marked contrast to the position of labor in America. Our Government is founded upon a Constitution which is a covenant and a pledge to those who toil to live, guaranteeing them the opportunity and the right to support and sustain themselves and their loved ones in respectability. Thus the labor movement in America, which plays such a vital part in the everyday life of us all, is one of America's greatest and most permanent institutions. The enviable position of this movement today does not tell the story of its humble beginning.

Fifty-nine years ago, in the city of New York, at a meeting of the Central Labor Union, Peter McGuire offered a simple resolution which was destined to set aside this day in commemoration of the workers of America. Two years later the American Federation of Labor endorsed the proposal of a national Labor Day holiday by unanimously adopting the following resolution:

"*Resolved*, That the first Monday in September of each year be set apart as labor's national holiday and that we recommend its observance by all wage workers irrespective of sex, calling, or nationality."

On June 28, 1894, Grover Cleveland signed the bill which made the first Monday in September a legal holiday.

Today, 59 years after that first Labor Day, we find that this movement has accomplished much in its unceasing endeavors to raise the American standard of living. Great social and economic reforms have been brought about to make our lot in life more pleasurable. Some of them are: Collective bargaining, employers' liability, minimum wage and maximum hours, Railroad Retirement Act, social security, unemployment compensation, and old-age assistance.

These gains touch the heartstrings of all 130,000,000 Americans. They have advanced humanity. It was not so many years ago that a man who was on the down-hill side of his productive years was turned away from employment with the phrase, "We're giving the job to a young man." Men of 60 and 65 were left with no work and no means of sustenance. There was no unemployment compensation. There was no old-age assistance. There was no social security. A man

had no place to turn that he might retain his self-respect and provide for his loved ones. But now we can approach age without fear. We can approach the period in life when we can no longer produce with the knowledge that we are not a burden on society but rather are entitled to a day's rest in the twilight of life, realizing that this is a partial reward and compensation for our long years of service.

And for these gains we must tonight pay tribute to organized labor. Were it not for the efforts of this organization, I venture to say that these gains would not have been enacted into law.

But there is yet work to be done. The problems are yet to be solved of broadening the social-security laws, providing more widespread medical attention, and securing for the worker better housing facilities.

As I have said, labor is responsible for the great gains that have been made. The American standard of living is the highest in the world. And "standard of living" and "labor" are one and the same thing, for it is American labor, through a constant vigil, that has made and maintained this standard of living which is the envy of the world. Twenty-five years ago America found herself in the position of preparing to defend the principles and ideals upon which our Nation was founded. History has a way of repeating itself. And tonight, unhappily, we find ourselves in almost a like position—a position in which uppermost in our minds is national defense. Again it is the responsibility of organized labor to defend and maintain these hard-fought social gains.

During the years 1914–17, wages increased 24 percent while living costs increased 42 percent, and by 1919, food, clothing, rent, and fuel had risen 98 percent. We cannot again allow this tremendous lag of wages behind the cost of living. The Government is making a sincere effort to equalize that which the worker receives with that which he must pay out for subsistence. Through the instrument of the Office of Price Administration and Civilian Supply, the administration is attempting to place ceilings on food, clothing, and shelter as well as other commodities.

The much-discussed work stoppages today are the result of labor's rightful way of maintaining these gains which are so much a part of democracy. But the use of this means is not nearly as alarming as the 100,000 accidental deaths recorded last year.

Thus we may point with pride to the condition of labor in our own country, but America is the sole example in the world today of upholding labor's rights and privileges of free men. Let us review the conditions in other countries. Under the Nazi regime, the birth rate has fallen and the death rate has increased. In the year 1938 the scourge of diphtheria in Germany was four times that of our own. Childbed fever, which is practically nil in America, has increased 55 percent in Germany. Youthful crime, drunkenness, and insanity are making vast inroads on the youth of that country. Venereal disease in the Rhine province was up 60 percent in 2 years. Accidental death has made a horrible gain of 25 percent. And the most significant statistics, that prove conclusively that many would rather die than live under such a government, is proven by the fact that the suicidal rate in Germany is the highest in the world.

Our position is much the opposite, in that the American soldiers of today are 2 inches taller and 15 pounds heavier than they were in 1917. Diphtheria declined 31 percent in a single year. Tuberculosis took a 50 percent drop in 10 years, and the fatality in pneumonia has been cut in half in 3 years. The average life of an American today is 16 years longer than in 1910. And again the most significant figures are that the suicidal and murder rate are the lowest on record. Thus the backbone of our defense is the health, happiness, and strength of the American people.

Let us analyze that beloved term, "American people." Those of English descent are by no means in the majority. In the boundaries of the United States there are 10,000,000 Irish, 16,000,000 Germans, 5,000,000 Italians, 5,000,000 Scandinavians, 5,000,000 Slavs, 5,000,000 Jews, 2,000,000 French, 1,000,000 Spanish, and other minority groups that range from one-quarter to three-quarter million in number. Over here, we are all immigrants together, even the American Indians. There is no race or creed or culture that has a monopoly on Americanism, except the human race, the creed of friendship and good will, and the culture of free speech and free opportunity. In America, there is nothing astonishing in the fact that a great defense program is in charge of Bill Knudsen and Sidney Hillman, both of them born in Europe and natives of conquered countries. They have special reason to appreciate what it really means to be an American. I like the story of Solomon Rizk who was an orphan living on what he could pick up in a poor village in Syria, when he discovered that his parents had been naturalized Americans. He woke up to find himself a citizen of a great Nation, though he was ragged and half starved and could speak no word of English. For 4 years, he doggedly struggled to reach his strange new country and finally succeeded. He can talk American now and has taught Americanism from New York to California. Solomon Riszk learned that we Americans are natives of all the world gathered here under one flag in the name of liberty.

A few days ago, a serious and tired man left the White House, boarded the Presidential yacht and steamed down the Potomac toward the sea. As the President traveled down the river, he must have raised his eyes for inspiration to the impressive monument, the Lincoln Memorial. Then as he gazed across the river, he must have remembered that many of America's sacred dead, including the Unknown Soldier, rest in Arlington Cemetery. As he contemplated the history connected with these historical shrines, the Presidential yacht would have rounded the bend in the river and come in full view of that beautiful southern plantation, Mount Vernon.

The Revolutionary War produced its Washington, who helped write the Constitution and established this form of government. The Civil War produced its Lincoln, who preserved the Constitution. The World War produced Woodrow Wilson, who, notwithstanding the fact that his ideals were far in advance of the times, defended the Constitution. All this the President must have realized as he made his way out to sea to meet with the Prime Minister of Great Britain.

How different this meeting was from those meetings of mockery held between Hitler and Mussolini on Brenner Pass. These were councils of war, and without exception after each of these diabolical meetings the world was made to suffer more misery, more death, and more destruction. I think I betray no confidence when I say that we in Washington realized that this historic meeting at sea was in the offing. How true that the results of this momentous conference carry out the ideals, ambitions, and aspirations of the President of the United States. History will record that the President set out on a peace program in the hopes of avoiding the tragic conflict which rages over the world today. On September 26, 1938, the President made a desperate effort to have the governments of Europe mediate the Czechoslovakian invasion. On the following day he appealed to Hitler to negotiate a settlement of the Sudeten dispute. In April 1939 identical messages were sent to Hitler and Mussolini, urging their assurance not to invade or attack a group of 31 nations for a period of 10 years. A like attempt was made at the beginning of the invasion of Poland. This is Roosevelt's peace record. Is it any wonder that out of the historic meeting between the great heads of the two democracies should come the proposal for a just and lasting peace.

No man knows the outcome of this infernal holocaust. Sometimes I think it is providential in view of the strength shown by the Soviet Union that these two totalitarian governments should become clasped in a death struggle. Let not the uncertainty of the outcome of this present struggle lull us into a feeling of false security at our own position. We hold no brief for any totalitarian government, nor any type of government which is so entirely different from our own. But because our position in this war is not one of sympathy but rather one that is realistic and practical, we propose to act as the arsenal for those who assist in overthrowing the tyrant of the world—Hitler. We are following this course for one reason, and one reason only; that is the defense of the United States of America.

Toward this goal, we have made much progress. And labor is responsible for this progress. If today, we have reached the point where we are producing some 1,800 planes per month, it is because of the efficiency and industry of labor. If today an American-made bomber can be flown across the North Atlantic in 6½ hours, it is because of the skill and genius of the American workmen. If in the past year we have performed a modern miracle and are now beginning to outstrip the world in production of quantity and quality of defense weapons, it is because America has put her shoulder to the wheel. For this requires total effort, the effort of all groups, the men on the farms, in the mines and factories, and the boys in the service of their country.

It is said that America has a rendezvous with destiny. And that destiny is the preservation of the ideals and institutions of freedom, the freedom that is our heritage placed in sacred trust by our forefathers who fought and died to maintain it.

Despite all that has been said by the opposition, America's position in this international crisis will secure the future safety of our people. The decisions that have been made by our President and the position taken by our Government is worthy of America.

In this crisis the American people will rededicate themselves to Americanism. I have confidence in the future of America because I have confidence in the people of America. We whose Government was founded to insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity will, through mutual trust and mutual sacrifice, lead the world from this darkness into a brighter day of a nobler and finer civilization.

Launching of the "Patrick Henry"

EXTENSION OF REMARKS

OF

HON. ALVA B. ADAMS

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

RADIO ADDRESS OF HON. GEORGE L. RADCLIFFE, OF MARYLAND

Mr. ADAMS. Mr. President, I ask unanimous consent to have inserted in the RECORD the very able and appropriate address delivered by the junior Sen-

ator from Maryland [Mr. RADCLIFFE] on the occasion of the launching of the ship *Patrick Henry*, the address being broadcast over a Nation-wide hook-up.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today we are on the outskirts of Baltimore, near the spot where the Star-Spangled Banner was written. We are launching the *Patrick Henry* in the Bethlehem Fairfield Shipyards, where, in amazingly quick time, this ship has been built. Today at shipyards on both the Atlantic and Pacific coasts vessels are being launched as a part of our rapidly expanding merchant marine. We call this 27th of September Liberty Fleet Day, and we do so rightly. On this day we are taking a very significant step forward in the sacred cause of liberty.

What are we building? In 1936 we started a shipbuilding program calling for the construction of 500 new ships over a period of 10 years. Today we are planning to build nearly three times as many.

Are we getting results? The answer is "Yes." This year, instead of the 50 ships originally planned, we will launch over 130. During 1942 we expect to add to our merchant-marine fleet approximately 600 new ships.

Some harassing obstacles have arisen, but these have not prevented us from building faster than specified in our schedule. Both owners of ships and workers in shipyards have shown, on the whole, a very patriotic spirit and have cooperated heartily in the carrying out of our construction program. See to it we must, and will, that the building of our ships is never jeopardized nor long delayed by lack of requisite materials nor by unsettled controversies between labor and capital. It is desirable, it is essential, that our building program move along efficiently and rapidly.

We are not only building new ships but we have reconditioned and are now using 200 old ones which were idle. We are also utilizing vessels obtained from foreign governments.

We are getting greater service out of our ships. We are finding that safety requirements will still permit us to load some of our boats more heavily. We are rerouting to secure economies in time and management. In many ways we are pooling effectively the activities of our shipping companies. Today the ships of this country are working on a basis of cooperation under the general supervision of the United States Maritime Commission, the like of which has not been known before in the history of our country.

Why do we need so many additional ships? Recall that until recently the most of our commerce with other countries was carried in foreign vessels, very many of which are no longer in their old trade routes. Our defense program is calling for commodities in ever-increasing amounts requiring greater transportation facilities by land, water, and air. The Army and the Navy are asking for more and more boats as auxiliaries. The giving of assistance to the Allies increases greatly the demands upon our own shipping facilities.

The launching of the *Patrick Henry* today has an appropriate setting. Maryland has played an outstanding role in the history of American shipping. Probably no ship was ever more graceful than the Baltimore Clipper, typified by the *Anne McKim*, or better known throughout the world. A large percentage of the American ships active in the War of 1812, both in commerce and in combat, were built in Baltimore. Among the most famous of these was the *Constellation*. That historic ship is again in the active service of our country. After this emergency is over, the *Constellation* will doubtless return permanently to the place of her birth in the waters of the Chesapeake.

In launching the good ship *Patrick Henry*, we congratulate the Bethlehem-Fairfield Shipyards, Inc., upon a job of ship construction efficiently and quickly done. We congratulate the workmen in these yards, whose intelligent and untiring efforts have been an indispensable factor. We congratulate Admiral Land and his associates of the United States Maritime Commission upon work very well done. Admiral Land is daily giving proof that he is one of the most efficient men in public life in Washington.

We congratulate the people of Maryland upon this new glorious page in the history of shipping in our State. We congratulate the people of the United States upon the outstanding significance of this launching today. It is a convincing symbol that we continue to hold fast to the doctrine of the freedom of the seas. That is a doctrine which many years ago a man of Maryland, Stephen Decatur, enforced upon the Barbary pirates of North Africa.

The freedom of the seas is vital to our prosperity and to our safety. That freedom we will defend if necessary. No internal controversies nor external threats will swerve us from this, our purpose.

Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

RADIO ADDRESS OF HON. HARRY H. SCHWARTZ, OF WYOMING

Mr. SCHWARTZ. Mr. President, on October 4, on a program of the Norwegian Broadcasting Service, I made an address to the people of Norway, which was broadcast in this country and transmitted to Norway by short wave from station WRUL in Boston, Mass. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My good Norwegian friends, in a radio address to the American people from Washington an October 2 I stated that our foreign policy is not a matter for partisan politics. It is rather a matter of national defense, and as such has the support of most of the more prominent and influential men and women in both Democratic and Republican Parties, and it is endorsed by the great mass of the American public.

In this speech I also emphasized the world-wide threat to the rights of labor which Hitler and his gang present, not only in all parts of Europe but here in the United States as well, and I made particular reference to the tragedy of Norway under Nazi control. For while other democracies of Europe also feel the bitter blight of nazi-ism, there are reasons why conditions in Norway hold particular appeal to me. Many years ago I was a resident of that part of our Central West then being settled by immigrants from Norway, and I learned from personal contact to respect and admire these men and women who, they and their descendants, are now among the best of American citizenship. The new arrivals were all intelligent, none of them illiterate. All were willing and eager to work. They helped us build towns and cities, people our then vacant public farm lands, and establish and improve our schools and universities. Some born in Norway, and many of their sons, were and are now Governors of our States and members of our State legislatures. Today they sit in the United States Senate and House of Representatives and hold positions of high trust and responsibility in the executive and judicial branches of our Government. America is determined that Norway shall again be free and independent. In many ways Norway has been an inspiration and help in improving our own democracy. All this and more I would like to have said in my radio appeal to the American people to strengthen even more our resolve to aid in every way in driving nazi-ism from the face of the earth. We will not consent to any peace until that is accomplished.

We have in America some few labor leaders who think the fight against the Nazis is not important to American wage earners. I asked them during my recent broadcast from Washington the following questions:

Where are the Italian, German, French, Belgian, Dutch, Danish, Norwegian, and eastern European labor leaders of a few years ago? In graves, in prisons, in hiding. A few survive. Some have sold their independence for a mess of pottage and now serve as labor taskmasters in nations under Nazi and Fascist control.

Where are the labor unions of these countries? Wiped out, outlawed. They do not exist. The Nazi-controlled governments fix the workers' hours of work, their wages; forces, grants, or denies their right to change the character of work or the places where they may work. This slavery is not imposed merely through the necessities of war. It is part of the philosophy of nazi-ism, and war is the weapon by which this system is to be cemented and made permanent.

And where are the great captains of industry, the controllers, and principal owners of the giant corporations of industrial Germany? These men who, in their folly, financed and built up Hitler until he and his fellow racketeers destroyed free labor. They, too, have been crushed, despoiled, and rendered impotent by the Frankenstein of their own creation. Some few managed to escape from their native land. They now bemoan their stupidity in the press and magazines of America and Britain. Here in America we have some few industrial Fascists seemingly willing to travel the same road to their own economic death.

Let labor consider Norway. There real democracy had reached almost perfection. Her people enjoyed every privilege and immunity set forth in the Bill of Rights in our own Federal and State Constitutions. Labor was organized in industry. Agriculture, labor, and capital worked together in harmony and in good will. Poverty and want did not exist. There was no selfish and cruel effort to accumulate great wealth and power at the expense of those who toiled to produce, transport, and distribute the products of the farm, the forest, and the factory. Norway is a fair land; it was a happy land. Then came the Nazi spies; the "fifth column" followed, seduced by bribe money; and finally the Nazi Army. Why did these emissaries of the devil come to Norway?

They came to despoil that nation, to destroy a democracy that belied the Fascist-Nazi charge that "democracies are outmoded," and they came to secure naval and military bases from which they hoped to destroy Britain, where capital and labor fight side by side.

But the democracy of Norway will not surrender. It fights on, even though the Nazi military power, working through the thin disguise of the bought and traitorous Quisling, took control of the churches, muzzled its religious leaders, abolished what in our country are county and State teachers and parent-teacher organizations, disbanded the Boy Scouts of Norway, commandeered food, smothered labor organizations, restricted the food allotted to labor. The Nazis have sent to the firing squads or to long imprisonment many courageous labor leaders who sought to bring about a mass protest against the

steadily worsening conditions under which labor exists in that all but ruined country, and now, with the approach of winter, they seize the blankets from beds in Norwegian homes in order to warm the Nazi Army fighting Russia.

If ever there was a cause to which both capital and labor, leaders and rank and file alike, should give every support within their power, that cause is the defeat of Hitler and all for which he stands.

And if ever there were men whom the workers of all countries should revere and remember, it is Hansteen and Vickstrom, the two Norwegian labor leaders who were executed by a Nazi firing squad on September 10. This execution has aroused the indignation of the whole civilized world; the protests against this brutal deed have come even from the trade-unions of Finland, Germany's present ally, and from Sweden. The American Federation of Labor, through its president, William Green, lost no time in declaring that "American labor is proud of the unconquerable spirit of the workers in Norway" and that "the plight of Norway should impress upon the workers of America and every other nation the fate that lies in store for them should Hitler's drive for world domination be permitted to succeed."

American newspapers by the hundreds made this execution the occasion for fighting words against nazi-ism and for words of praise for the brave people of Norway. Yes, the names of Viggo Hansteen and Rolf Vickstrom shall be remembered by Americans as well as by Norwegians. These men have already taken their place not merely in the list of labor's martyrs; they are in that band of heroes who represent all classes and all professions and who throughout the centuries have defended human freedom and human civilization.

I am glad that this short-wave broadcast makes it possible for me to say directly to the people of Norway that it is the fixed policy of the United States to aid to the extent of our every resource all those who fight nazi-ism.

In ever-increasing quantity American bombers and fighting planes, tanks, guns, and munitions are being sent to those who fight for freedom and independence in Europe. Many of these implements of war are manned by American pilots and gunners and serviced by American mechanics. All are volunteers in the cause of democracy. We realize that final victory cannot come immediately. But, be assured, you men and women of Norway, that we are redoubling our capacity to produce the weapons needed by those who fight Hitler in Europe, Asia, and Africa, and these weapons are being delivered, although some ships are lost at sea. Our Navy is now sweeping the seas to destroy the barbarians who sink our ships and your ships, and kill our own citizens and your citizens. Our course is charted. There will be no turning back. I bid you be of brave heart as you fight on.

Mobilization for Human Needs

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ADDRESS BY THE PRESIDENT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the President and broadcast over a Nation-wide hook-up on the 3d of October in connection with the 1941 Community Mobilization for Human Needs.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Once more I am making a straightforward, simple appeal to the people of our country to support a great annual event—the community mobilization for human needs. Most of you do not recognize this name, but it represents the tying together of hundreds of local community efforts known as "community chests" or "community funds" or "welfare drives." These represent consolidations of many thousands of local charities run by churches, social-welfare organizations, health associations, and many others.

The American people have given generously in the past—very generously.

But this year I hope the American people will give more than ever before.

That is because in a great world threat to our future we must, for ourselves and our country, preserve and make secure our values and the strength of our institutions.

It is true that more people are at work in our land today than ever before. It is true that our national income is rising. But it is still true that millions of our fellow citizens are still under-nourished, ill-clad, and poorly housed. Bad health maims too many of our American households.

We must build up, not merely our Army and our Navy but we must build up the well-being of our civilian population.

In past years we have done this through a great humanitarian revival. This year we must do it for the added reason that adequate national defense definitely needs it.

Once more I point out to you that the Federal Government cannot and ought not to try to cover the whole field of social service. Private agencies in every locality are essential, not only for the good of the sick and the children and the mothers and the poor but they are of the utmost importance in instilling charity or greater love of our fellow beings in the hearts of all of us as individuals.

We can afford to be better neighbors to our neighbors. We can afford to give support to those noble men and women whose lives are devoted to the help of their fellows.

It would be a calamity for the Nation and its future if private charity did not exist and grow. That is why I am asking each and every individual in every town and village and on every farm to contribute something, large or small, toward this great and proven service. You will be helping to build a stronger and a better America. When I have said that, I have said all that is necessary, for it is a spiritual as well as a practical appeal to the better natures of my fellow citizens.

Repeal of Neutrality Act

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

RADIO ADDRESS OF HON. ALBERT B. CHANDLER, OF KENTUCKY

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the able address delivered last evening by the junior Senator from Kentucky [Mr. CHANDLER] over the American Forum of the Air on the subject Shall We Repeal the Neutrality Act?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the light of events which have occurred with such lightning rapidity since 1939 it now seems apparent that the passage of the so-called repeal of the Arms Embargo Act in 1939 was in no sense a return to international law. It constituted a complete abandonment of those principles of freedom of the seas and neutral rights for which America had fought in 1798, 1805, 1812, and 1917. The President expressed the belief in 1939 that the arms embargo was vitally dangerous to American neutrality, American security, and American peace. But, in order to avoid a recurrence of events prior to our entrance into the war in 1917, we forbade all vessels and citizens to go to any European belligerent port thereby inviting the Germans to sink on sight all neutral ships without fear or protest from the Government of the United States. Hitler and his associates took full advantage of this opportunity and realized at once that this new standard of 1939 was not an entirely unmixed blessing for their enemies. Twenty-two years ago the United States had gone to war with Germany rather than accept the German terms which would have allowed one American vessel each week to go to Britain.

While the preamble of the bill stated that we waived none of our own rights and privileges, or those of any of our nationals, under international law, the text of the bill was an utter abandonment of neutral rights and freedom of the seas. By this act we sought earnestly to avoid bringing America into the war because of the obvious desire of all of the people of the country to avoid war, if humanly possible. We did a thing that had never before been done in the history of our country. That is, close the high seas to the use of our own ships, and those of 21 other neutrals. This, in spite of the fact that we had always insisted from time immemorial upon full respect for our rights to be free upon the high seas. That it has failed to accomplish its purpose is apparent. That we must at once either modify it, or repeal it, at least to the extent that we serve notice upon the German Government that we intend to arm our merchant ships in their own defense, and further that we intend to see that shipments of munitions and supplies authorized under the Lend Lease Act will reach their destination in safety.

We must strengthen the arm of the President of the United States and of Secretary Hull. We must not permit England and Russia to fall through our failure to supply them with the munitions and supplies which they so urgently need at this time. We must go forward with assurance and strength which this country possesses in such abundance. We must rely upon the leadership of the President of the United States and a divine providence, and it is my belief that providence usually walks with those who show by their deeds that they merit its protection.

Without aid immediately and in large proportions from the United States, Russia will be lost, England might also inevitably fall. If such a thing should occur it would place the United States in a position which some of our short-sighted statesmen have seemingly wished for, isolated and alone. We must realize that destiny has placed us in the position of being in or out. We must either cooperate while there is yet time, and while we have Allies, or become reconciled to the final act of this great tragedy when we shall have to defend ourselves alone. It is my sincere belief that a defeat for Russia

and Britain will bring disaster to the United States. We could not then defend ourselves against the combined power and resources of a ruthless German Government. Slave labor would be used to overcome the work of freemen and gradually the aggressors on the east and west would tighten the ring around the United States. This country must become wide awake to the dangers that threaten us. We do not escape danger by being weak, or by being afraid. We must shake off any spirit of defeatism which exists in the country. We must be "up and doing with a heart for any fate." America must put its faith in its own strength and in its own determination. It cannot expect President Roosevelt and Mr. Hull to achieve peace for the people of the country with a man of the caliber of Hitler who does not keep any agreement he makes. His attack on Russia was made in the face of a definite statement to his own Reichstag in September 1939, that he would not go to war as an enemy against Russia again. In his statement there he asserted that they had been enemies in 1917 and had fought on opposite sides with the result that both had been the losers. He vowed then that this would not happen again. The record speaks for itself.

We must remember, in this critical hour our country's history, that this is a world revolution and that we may not be able to escape its consequences. We must prepare ourselves in every way to help crush it. Churchill seems to have been the only statesman in Europe who realized the futility of dealing with the German military dictator. Churchill asserted that if this dictator came to England that they would fight him in every village and town and on every beach until one or the other perished. That seems to be the only way for the establishment of an enduring peace. Dr. Frederick Schuman, in his recent revealing book, Night Over Europe, states the case well when he says:

"In the days to come the fittest will survive and rule the world. The unfit will fail and lose body and soul. The fittest will be those who know that the world is one. The fittest will be those that know that national sovereignty and international anarchy are marked for death; that laissez-faire, feeble government, the rule of money and property are alike lost forever; that new visions and new life-giving deeds must replace the shibboleths of yesterday. The fittest will be those who know how to reconcile their preferences with stubborn facts. The fittest will be those who realize that the world of tomorrow belongs to the peoples who care enough about their way of living to sacrifice their prejudices and their wish dreams as well as their safety and their very lives in its defense. Only those are fit who are in form and attuned to the needs of the world as it is, not as they imagine or wish it to be. Only those who see why an old world is dying are fit to make a new world after their heart's desire. The fit will conquer the future."

Dedication of Waterman Memorial Building

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ADDRESS BY ELROY NEWTON CLARK

Mr. AUSTIN. Mr. President, at Burlington, Vt., last Saturday, October 4, exercises were held incident to the dedication of the Charles Winfield Waterman and Anna Rankin Waterman Memorial Building on the campus of the University of Vermont. Charles Winfield Waterman was a Senator of the United States from the State of Colorado, and I know that many of us had the honor of associating with him here as a colleague before he passed away. On the occasion of the dedication of the memorial building an address was delivered by Elroy Newton Clark, of Denver, Colo., who, as well as Senator Waterman, was a native-born Vermonter. Both these men were together in the University of Vermont, members of the same class, and went to Denver and practiced the law there in the same firm. The address delivered by Mr. Clark is entitled to national consideration not only because of its references to a former Senator of the United States and to his gentlewoman wife, but also the address was singularly inspiring and encouraging to citizens of the United States who support and develop such institutions of learning as the University of Vermont, which combines a private eleemosynary institution with a State agricultural college in a union that has a public character under the patronage of the United States as well of the State.

So, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Mr. Elroy Newton Clark on the occasion of the dedication of the memorial building.

There being no objection, the address was ordered to be printed in the Appendix of the RECORD, as follows:

Mr. Chairman and members of the committee, members of the board of trustees of the university, the faculty, undergraduates, ladies and gentlemen, we are met on this hundred and fiftieth anniversary of the founding of the university, you to receive and I to present to you, and especially to the undergraduates of this venerable institution, the final concrete embodiment of the life work of a distinguished alumnus and a loyal native son of this Commonwealth of Vermont.

As we stand here at its portal I can fancy that the silent shadowy forms of Ira Allen, Lafayette, Angel, Buckham, Powers, Waterman, and a host of other founders, teachers, and students mingle with us and silently approve. The university has received many splendid tributes from its grateful alumni, but none more impressive than this.

More than 60 years ago a young man came down from his modest home in your hills to qualify himself for the conflict which has confronted every young man and woman who has gone forth from these halls of learning during the past century and a half. In 1926 that youth, grown to manhood, after a brilliant professional career, was a candidate for the United States Senate, and at his request I wrote a brief sketch of his life. With your indulgence, I should like to repeat a pen picture of his early youth as depicted in that short biography:

"A little hillside farm carved by a sturdy ancestry from a New England wilderness, little fields walled with rocks laboriously gathered from their none too generous soil. A modest frame cottage, miles from a schoolhouse. A slender barefoot boy of 14 guiding a plow behind a team of drowsy oxen, or wielding a scythe or hoe, or gazing wistfully out across the few ancestral acres, over wooded hill and tumbling stream, into the great unknown world beyond. Seeing visions and dreaming dreams. Bidding adieu in the quiet, repressed fashion of boys brought up amidst such surroundings, to a gentle-faced mother and gray-bearded father who wish him Godspeed and all good fortune, and who would gladly furnish the youthful cavalier with good steed and brave trappings and armor, but could not because the land was lean and afforded scant sustenance for even those who tilled it. But they gave him a splendid heritage of clear vision, cool judgment, and dauntless courage."

That was the boy who, some 4 years later, matriculated here. At that early period of his evolution he gave little promise of one day becoming a national figure, but did receive his inspiration here, and here continued to see visions and dream dreams of the future. The acorn does not reveal the majestic size to which the embryo oak imprisoned in its shell may grow.

Men come and men go. Few of them leave any memorial to indicate to future generations that they have passed this way. Charles Winfield Waterman left this campus in 1885. He departed with no vainglorious thought of some day erecting here a monument to preserve his memory and perpetuate his fame. But I suspect that even in those distant days he nurtured an ambition to repay in service the inspiration debt which he felt he owed to the University of Vermont. It does not fall to the lot of many men to reach the goal of their ambition. To him it did. He has paid that debt in full measure. At the end of an honorable and brilliant career in a distant State and in the council chambers of his country he came back and laid all that he had gained upon the altar of his alma mater.

Undergraduates, this beautiful structure will remain an inspiration to you and those who come after you as long as brick and mortar shall cling together. It will touch you and speak to you and them for generations to come—the mystic touch of a vanished hand and the sound of a voice that is stilled, but forever dynamic and always vibrant, an inspiring tradition of dauntless courage and undying loyalty.

The trustees of the Waterman fund have finished their task. The architects and the builders have completed theirs. There remains only the formality of turning over to you and posterity the incarnate realization of a youthful vision, the brick and mortar embodiment of a dream come true and its dedication and consecration to the high purposes of the donor and founder. In the thought, and in part the words of Lincoln at Gettysburg, "In a larger sense we cannot dedicate, we cannot consecrate. * * * The world will little note nor long remember what we say here," but as long as these walls stand, an ever-lengthening procession of teachers and students will remember what he did here. It is for them to dedicate themselves to those high purposes reflected in this splendid gift to them—not a mausoleum but a temple of hope and inspiration.

On behalf of my cotrustee and myself, and in the name of Charles Winfield Waterman and his wife, Anna Rankin Waterman, in deep humility but with pardonable pride, I present to you this beautiful memorial. May it endure as long as the morning shadows of Mansfield hover over it.

I realize full well the futility of this wish; I know that in the fullness of time another Kingsley may stand here and lament:

"How swift the words of men, back to earth again,
Ancient and holy things, fade like a dream."

But the breed of builders never dies. The spirit of loyalty and of progress will still survive after these walls have crumbled to dust. Above the lamentations of a future Kingsley will rise the triumphant song of a Holmes:

"Build thee more stately mansions, O my soul,
As the swift seasons roll;
Leave thy low-vaulted past.
Let each new temple, nobler than the last,
Shut thee from heaven with a dome more vast,
Till thou at length art free,
Leaving thine outgrown shell by life's unresting sea."

My good friends, I bid you now to enter, possess, and enjoy this stately mansion—this new temple of spiritual liberty and loyalty, and put it to the high uses which inspired its creation and which are reflected in the legend inscribed on the great seal of the university:

"Studiis et rebus honestis."

I leave it confidently in your keeping and in the keeping of those who will succeed you down through the ages—a sacred trust to you and them.

Objectives of the American Bar Association and the International Situation

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ADDRESS BY WALTER P. ARMSTRONG, PRESIDENT, AMERICAN BAR ASSOCIATION

Mr. NORRIS. Mr. President, on October 3, 1941, there was a luncheon in the Claypool Hotel at Indianapolis, Ind., in honor of Walter P. Armstrong, who was elected president of the American Bar Association. Mr. Armstrong delivered an address at that luncheon. I was attracted by what the newspapers said about it, principally the last part of his address, in which he devoted his remarks to the international question that is presented before the world today and suggested the viewpoint which the lawyers of America ought to take and the activities in which they should indulge in connection with that great question. Because of that portion of the address, although the entire address is very illuminating, I was influenced to telegraph Mr. Armstrong at Memphis, Tenn., where he resides, for a copy of the entire address. I have received it, and now hold it in my hand. I ask unanimous consent, for the reasons I have stated, that it be printed in full in the Appendix of the RECORD. I think it is a very illuminating address, particularly to the attorneys of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There are in my heart feelings it would be ungracious not to express and in my mind thoughts which I must voice that we may understand one another.

I have a deep appreciation of the honor you have conferred upon me. I hope you will not think it immodest of me to say that I consider it the highest nonofficial honor that can come to an American lawyer. For many years the American Bar Association has been a sort of religion with me. I have found more pleasure and satisfaction in my work in the association than in anything else I have ever undertaken. So while I fully realize that there are many others equally or more deserving than I, I yield to none in my belief in the association's mission, my devotion to its cause, and my determination by every means in my power to advance its interests.

I have a unique feeling about a recognition that comes to me from lawyers. They are so keen in their observance of one another and so realistic in their appraisals, that when one receives—whether or not one merits—their approval, one has at least survived an ordeal by battle.

Your lances have often found the chinks in my armor. Yet, in your generosity, you are willing that, for a little while, I should ride with the head of the column. I hope—I am determined—I shall not fail you.

I shall say only enough to enable you to understand what I am trying to do throughout the coming year. This I do because this is the only opportunity I shall have to express in advance to the association as a whole the vision I see.

It is not the prerogative of the president to determine the policy of the association, though he has not only the right but the duty of invoking, through proper channels, the action of the policy-making bodies upon subjects that he conceives to be of major importance. No president has a right to commit, or seem to commit, the association either to any action or any view that is merely a personal hobby of his own.

Moreover, the only way we can hope to obtain our objectives is by reasonable continuity of policy. If we merely zigzag from point to point we shall arrive nowhere. I need seek no further for an illustration than to emphasize what folly it would be to forfeit the gains made during the past year by failing to carry on the constructive work done under the splendid leadership of President Lashly.

The president, however, should be no outmoded seismograph, quiescent except to record the will of the association when it reaches temblor proportions. Subject always to the supervision of the house of delegates and board of governors, he has room for selection, as to the emphasis he, at least, shall place upon the various activities of the association. Not infrequently he must be the sole judge of the timeliness of presenting the various parts of the association's program.

Moreover, from time to time questions arise as to which the president need not hesitate to take a position, even though the association has not officially acted upon them. These are subjects upon which the views of the association are clearly implicit because of what it has done or said upon other subjects, or as a matter of general policy. As to these the president should be able to sense the views of the association and to express them with inerrancy and fidelity.

In short, my view is that I am your representative and not a mere delegate.

Because of world conditions, in which our own country is so deeply involved, one who would at this time venture to formulate an inexorable and inelastic program must either possess the vatic gift or be recklessly foolhardy. I know I do not have the one. I hope I am not the other. Therefore, the things I shall say are, to some extent, necessarily tentative conclusions.

So far as is now foreseeable, however, it seems that in the coming year the activities of the association can be cast in a fairly symmetrical pattern. The American Bar Association is not a reactionary organization. Its record is not one of intransigency, but one of sane progress. It has opposed change only when convinced that the proposed change was unnecessary and was contrary to some fundamental tenet of our system of government. There is no place in our creed for "lost causes, forsaken beliefs, and impossible loyalties." I would go even further—when changes are made that we would not have initiated we should yet assist in implementing and improving them so that they may function in a way best for all. We desire no place in the tent of the sulker. So, not wedded to the old, because of long-accustomed slow-pulsed acquiescence, and not enamored of the new because of a restless zest for change, we face the future, impatient with old abuses but somewhat skeptical of untried novelties, earnestly endeavoring to ascertain, to plan, and to help achieve whatever is best, not for ourselves but for our country.

Most of the objectives of our association are long-range objectives. Our constitution speaks of some of them. Ours is the self-imposed task of advancing the science of jurisprudence, of promoting the administration of justice, in all its modern forms and forums and of upholding the honor of the profession. Moreover, we have a general-welfare cause. We have assumed the burden of correlating the activities of the State bar organizations in the interest of the public.

These are positions that cannot be taken by assault. There is no zero hour. The advance has not been fast—indeed, oftentimes so slow that some of us have been forced to accept the reluctant philosophy of Horace Mann, who, as he looked back upon the slow progress some of his reforms had made, consoled himself with the thought, "The trouble was that I was in a hurry and God was not." We have lost some redoubts. Our line has sometimes been pushed back, but it has remained unbroken. On the whole, we have not only steadily advanced, but have consolidated our gains.

I shall not trespass upon your time by attempting to catalog all the ships we have launched. We have promoted the administration of justice by serving for the duration in the long fight to reform Federal procedure. We have advanced the science of jurisprudence by helping revoluntionize legal education. We have upheld the honor of the profession by formulating a code of ethics, and securing its acceptance by bar and bench. If we had accomplished only these things—and we have accomplished many more—we would at least in some measure have vitalized the vision that came to Judge Baldwin and his friends at Saratoga in 1878.

Not in an attempt to exhaust the list, but for the purpose of further illustration, I mention, also, the Journal, uniform State laws, legal aid, unauthorized practice, law lists, judicial salaries, judicial selection and judicial tenure, and laws affecting the rights of employees on labor relations. My purpose in alluding to these is to emphasize my conviction that their importance must not be lost sight of because of the present emergency. Indeed, one of the dangers of any emergency is that its exigent demands may generate a forgetfulness of other things, whose importance may be temporarily obscured but is in no wise lessened.

Because of our financial situation and the demands of the present and the immediate future, we may temporarily not be able to treat some of these activities as generously as we should like. This must not be taken as evidence of any diminution of interest. One and all we realize that the momentum must not be lost before comes that happier time when they can resume full speed ahead.

Some of our objectives are so basically related to our system of government that efforts on their behalf are always timely. Even as to these, however, a due sense of proportion demands that the extent of our efforts vary from time to time according to the conditions that confront us. In this connection it seems to me that the time is at hand when the association should not only not lessen, but, if possible, increase its efforts to deal with administrative tribunals in accordance with the principles formulated by the House of Delegates at the 1941 midwinter meeting.

Our desire to subject the work of administrative tribunals to the scrutiny of the courts—to test the new method, to some extent at least, by the old—in no sense indicates a complacent satisfaction with the old. Contrariwise, we recognize the need of constant improvement. Nor are we unwilling to borrow from the new methods that will better implement the old. In the Federal field the Rules of Civil Procedure have

revolutionized practice. The question of amending the rules is now upon us. Here again the association should take the initiative, especially in seeking to determine the best method by which proposed amendments can be brought before the court for its consideration.

The American Law Institute is sponsoring a code which will greatly liberalize the rules of evidence in those jurisdictions which adopt it. The association should consider whether it will seek to have its principles accepted, especially in the Federal courts.

We have committed ourselves to the revision of the Judicial Code. We should consider whether the time is propitious now to press this work without incurring the danger of diminishing the jurisdiction of the Federal courts.

These things seem to me to fall within a single framework: Proper judicial review of the adjudications of administrative tribunals, coupled with improvement and liberalization of the judicial process.

We cannot confine our efforts to the Federal courts. The impetus given to the reform of State practice by the Federal Rules of Civil Procedure has been stepped up many times by the untiring and constructive work of the special committee on improving the administration of justice under the splendid leadership of Judge Parker. We must carry this work forward and to a conclusion, while the bar, the bench, and the people are in the mood, and while the vast store of accumulated material is available. We have repeatedly professed our faith in the courts. We must now demonstrate our ability to equip them to cope with present-day demands.

But beyond all this, wherever we turn, we recognize the impact of the gravity of the hour in the lines of every face we see. We are endeavoring and shall endeavor by all means in our power to contribute to national defense.

We have been fortunate in the constructive leadership of President Lashly. Mr. Beckwith's committee has vindicated its claim that the organized bar is the people's lawyer. The committee on coordination of national defense has made a substantial contribution by assisting in formulating legislation.

In this defense program I think we can also find a harmonious design: Aid to service men and their families; defense legislation; our duty, as phrased by the bill of rights committee in its report, "to give the fullest cooperation to the country during this grave period, and yet forestall that hysteria which always tends toward the obliteration of civil rights or unnecessary limitations of them."

With these things I would couple and suggest the expansion of the work of the junior bar conference and the standing committee on American citizenship, whose chartered purpose is "to devise ways and means for promoting the study of and devotion to American institutions and ideals."

I have spoken to you of concrete things. We have a job to do and cannot content ourselves with pious hopes. There is, however, something that seems to me to pervade all that I have said—something that is innate in all that we do or attempt to do—the existence and efficient organization of an independent and courageous bar are essential to the proper functioning of a democracy such as ours. To you I need not elaborate upon this belief, nor give reasons. This only do I say: The decadence of the bar would be among the greatest disasters that could befall our way of life. But it will not decay. It will survive—survive with ever-growing strength—survive because the American Bar Association will give to the lawyers of America leadership—leadership which will show them how they can and must continue to be as they have always been, one of the most salutary influences in American life.

President Lashly has dealt adequately and eloquently with the imponderables that pervade the present emergency. There is little I need add, except emphatically to associate myself with what he has said. We are all agreed that the success of the forces of evil which are personified in Hitler would be a grave and imminent threat, not only to the ideals of liberty, which we have always cherished, to the freedom of religion which we have always held sacred, but to our national security itself. The forces against which we are arrayed are, for the present, at least, disciplined forces moving with insensate and almost insane fury at the will of one man. To me it seems a self-evident fact that a democracy such as ours cannot combat these forces unless it imposes upon itself severe self-discipline. In helping the American people attain this self-discipline, the bar of America can render significant service. Aside from those who hold responsible public offices, lawyers, by training and experience, constitute the group best fitted to lead public opinion. Indeed, in this the members of the bar have one advantage over those charged with the duties of office. They are answerable only to their own conscience, and not to any constituent. They need have no fear that they will advance so rapidly that they will lose contact with their followers. The time has come for plain speaking.

The American people must be told not only boldly, but bluntly, the need for self discipline to which I have alluded; a discipline that must loyally and unanimously support the decisions of our Government after they are made, without carping criticism or partisan bickering, not the suppression of free speech, but the expression of informed patriotism; a discipline which will generate a public opinion which will irresistibly demand that those engaged in production begin to forget themselves and to think of their country; a discipline that will create in our minds an awareness that if the elimination of Hitler and Hitlerism is essential to our security the time is almost at hand when the question of how that can most effectively be accomplished is one largely of strategy for those best informed and in authority; a discipline which will make us realize that it is futile merely to strive for fancied security for weeks, months, or even a few short years, which would make us realize we are charting a course not only for ourselves, but for our children and our children's children—that must make us tough fibered enough to give, if necessary, our today for their tomorrow.

As urgent and as necessary a thing as this discipline is, it can only be achieved by the people themselves. Upon whether or not they can achieve it—short of a great ground swell of emotional patriotism engendered by actual armed conflict—depends in large part the future of our country. Realistically to aid in fostering this discipline furnishes the greatest opportunity and the most serious responsibility that has come or can come to the bar in our time.

Gliders

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

RADIO ADDRESS BY MAJ. GEN. HENRY H. ARNOLD

Mr. REYNOLDS. Mr. President, recently I went to Elmira, New York, to make some observations at the training school there relative to transports insofar as gliders are concerned. It was indeed a very interesting trip, and I am hopeful that those interested in the military advancement of the country may find themselves more thoroughly interested in the development of that branch of our national service.

On my return I read in the magazine Soaring, a very interesting article by Major General Henry H. Arnold, entitled "Speaking for the Army." I ask that the article be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Soaring of July-August 1941]

SPEAKING FOR THE ARMY

(Maj. Gen. Henry H. Arnold)

(Radio talk delivered by Maj. Gen. Henry H. Arnold, Deputy Chief of Staff for Air, Chief of the Army Air Forces, at Elmira, N. Y., 6:45 p. m., July 13, 1941, over station WENY)

Good afternoon, ladies and gentlemen, I want you all to know I have had a very interesting time on Harris Hill this afternoon.

[NOTE.—The general had made a flight in a glider.]

In Napoleon's time armies fought on their stomachs. As long as combat was confined to water and land, warfare was not a very complicated matter, but when the Wright brothers proposed to the War Department 33 years ago that there was a place in warfare for a power-driven glider very few military authorities realized it, but the whole scheme of combat changed. From that time on, to be effective armies had to be equipped with all the scientific devices that the ingenious brain of modern man could evolve and produce.

This afternoon we witnessed the closing events of the national soaring contest here in Elmira, the glider capital of the Nation. For the first time since the Wright brothers put an engine in a glider and sold it to the War Department a powerless plane bearing the red, white, and blue insignia of the Army air forces and flown by an Air Corps officer soared over these hills along with those competing in the contest.

It happened here because for more than 6 months the Army air forces have been engaged in engineering research and training in connection with the prospective use of troop-carrying gliders. Once again we are embarking upon a new form of warfare. The glider has become a weapon. Within 90 days we hope to have experimental troop-carrying gliders delivered to the Army air forces so that we may determine by actual experience how best they may be employed in the country's defense.

Already two groups of Army officers, expert airplane pilots, have successfully completed courses in glider instruction. Additional classes will be started in the immediate future. Our decision of months ago, to study the use of gliders in warfare, was horribly justified just a few weeks ago when German troops swarmed down in gliders onto the island of Crete and captured the historic Greek island after bloody fighting.

They came in gliders carrying from 12 to 30 soldiers. They were towed by lumbering old transports unsuited for aerial combat but ideal for this new purpose with as many as 10 or 11 gliders strung out behind each plane. In an incredibly short time, the Germans, by air transport and gliders, landed 15,000 troops on the island, together with their rifles, light machine guns, heavy machine guns, and field pieces. They even brought medical supplies and radio equipment. If we ever had doubts about the military usefulness of the glider, those doubts

certainly would have been dispelled by the awful lesson of Crete.

We in the Army Air Forces have never denied or failed to appreciate the military possibilities of the glider. Power-driven planes have been our first consideration, because our geographical position has made that necessary. Our first priority must go to the long-range, heavy bomber, a weapon so necessary to carry out our policy of hemisphere defense. But that did not and does not now mean that, merely because our great distances make our military situation different from that of Europe, we have ignored the glider. Far from it—we knew that a modern army must have all new implements of war to be effective. Tanks, armored divisions, air infantry, parachute troops—all of them are necessary if we are to defend ourselves successfully.

We can't expect to tow strings of gliders behind airplanes over 3,000 miles of ocean, but we are certain that there are many missions for gliders which may develop in the future. For this reason, we don't know today what final form our glider force will take. We won't know until we have completed our studies, which are being undertaken here, at other gliding centers, and in our laboratories at Wright Field in Dayton, Ohio. We do know that we must have gliders, perhaps hundreds and possibly thousands of them, capable of carrying at least 15 men each, together with full equipment, including rifles, machine guns, and even lighter cannon.

Here in Elmira are gathered men and women who have kept the art of glider flying alive in this country, where restraint never has made it necessary, as was the case with Germany, for us to find a substitute for the expensive powered plane. This little band of soaring enthusiasts already has helped us in our studies, plans, and training. With their continual help, we shall have a glider force second to none, ready for service whenever and wherever it may be needed. That we all hope will never be. We have not been caught napping, nor will we be. We shall have such a force, and we will have it when we need it.

Pacific Northwest Power Resources

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

STATEMENT OF SENATOR HOMER T. BONE AND REPRESENTATIVE MARTIN F. SMITH, OF WASHINGTON

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement coming from the senior Senator from Washington [Mr. BONE], our colleague, who is now in the hospital, and Representative MARTIN SMITH. The title of the statement is "Pacific Northwest Power Resources Must Not Be Run by Political Bureau with Headquarters 3,000 Miles Away."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PACIFIC NORTHWEST POWER RESOURCES MUST NOT BE RUN BY POLITICAL BUREAU WITH HEADQUARTERS 3,000 MILES AWAY

Two bills vitally affecting the future of the Pacific Northwest have been introduced in Congress. Both bills would set up a permanent Columbia Power Authority to replace the present temporary agency operating Bonneville and Grand Coulee electric systems. Both bills provide machinery for acquisition of privately owned electric utilities by the Authority, and resale to cities and P. U. D.'s of the distribution systems so acquired.

But these bills differ otherwise on seven important principles and on many details. One of these bills was drafted wholly by the Interior Department, with certain revisions suggested by Senator BONE. The other, known as S. 1852, was drafted by Senator BONE, with the aid of Congressman MARTIN SMITH, other Members of the State's congressional delegation, officers of the Interior and Treasury Departments, representatives of the Federal Power Commission, and representatives of labor and other organizations. This is the Bone-Smith bill.

SEVEN REAL ISSUES

While Mr. Ickes, in speeches in the Northwest, has conveyed the impression that the issue raised by the two bills is whether one man or three men shall run the Authority, that is relatively a minor issue, although not without importance. Here are the real issues:

1. Shall the Authority be plunged into politics by being made a mere arm of a political bureau, the Department of the Interior; or be a nonpolitical independent agency?

2. Shall the Authority be run by an official 3,000 miles away in Washington, D. C.; or be operated by a fully responsible board residing in the region of operation?

3. Shall the Authority be allowed to exercise arbitrary and dictatorial control over municipalities with which it does business; or shall the Authority be restricted by law to permit a large measure of local autonomy to cities, towns, and public-utility districts in operation of their plants?

4. Shall employees of Columbia Power Authority be denied rights important to labor and enjoyed by employees of private business and by employees of T. V. A.; or shall the Authority be required by law to bargain collectively with its employees?

5. Shall the administrator of Columbia Power Authority be appointed by the Secretary of the Interior without notice and without possibility of appeal or hearing; or shall a board or single administrator be appointed by the President and confirmed by the Senate after public hearings?

6. Shall we rely on the vague hope that future Congresses will appropriate to develop the Columbia Basin irrigation project; or shall adequate and definite provision for construction of the project be made now?

7. Shall the Authority be so surrounded with bureaucratic routine and red tape that it will take weeks to accomplish what ought to be done in days; or shall the agency be set up like a modern streamlined private business?

ICKES BILL IS UNSOUND

The Ickes bill places the Columbia Power Authority in politics and would permit any Secretary of the Interior to change without notice the policies and high administrative personnel of the Authority. The present or any future Secretary could appoint an administrator without Senate confirmation or even a public hearing. It would be possible in the future to have an administrator appointed who is opposed to the principles and practice of operating public power agencies. In other words, the Secretary of the Interior would be the real administrator, and every time the national administration changed or a new Secretary was appointed, the Columbia Power Authority would be in jeopardy.

On the other hand, the Bone-Smith bill provides for operation along the lines of T. V. A. The President would appoint a board of three, subject to Senate confirmation. If there were any doubt about the character and qualifications of a nominee, he could be searchingly examined at a public hearing. The board members would serve for 9 years, one member's term expiring every 3 years, thus assuring continuity of policies that fit our Northwest needs.

WASHINGTON, D. C., TOO FAR AWAY

The Ickes bill is impractical in that it proposes to operate a vast business enterprise from 3,000 miles away. It can't be done efficiently. Dr. Paul J. Raver, now Administrator, could do a better job if he were left free to work out his problems without being checked by Interior Department officials who know little about the technical problems on which they pass judgment.

Mr. Ickes has declared that his bill provides for quick-on-the-trigger administration, while the Bone-Smith bill provides for a debating society to run the Authority. The fact is the Ickes bill provides for four administrators, one above the other, permitting endless appeals on up the line. The administrator at Portland would be subject to the rulings of an assistant to the Secretary of the Interior, who would in turn be responsible to the Secretary, who in turn would take orders from the President. In contrast, the Bone-Smith bill provides for a single, responsible board, decisions of which would be final.

Under the Ickes plan anyone dissatisfied with the Administrator's ruling on such a matter as a contract could, if he had political pull, bring pressure to bear at Washington, D. C., to win his point. Disturbing reports have been received that such things have already been done.

HOW ABOUT HOME RULE?

The cities of Washington, such as Tacoma and Seattle and smaller places, have been successfully running power plants for a long time. They do not want the Authority to run their affairs for them. Under the Ickes bill the Authority could force public agencies and cooperatives that buy power from the Authority to sign contracts that would result in transferring a considerable measure of control of city and public-utility-district electric systems to the Federal agency. Under the Bone-Smith bill that would not be possible because the bill prohibits such dictatorial contracts. Which do you want—autocratic rule by Mr. Ickes or home rule by elected officials of cities and public-utility districts?

The Ickes bill is not satisfactory to labor for two reasons: It does not provide for collective bargaining; and it would require labor to negotiate with Federal officers separated from our State by the width of the continent. The Bone-Smith bill, on the other hand, is approved by labor. The provisions in the Bone-Smith bill are based on the satisfactory experience of T. V. A. with collective bargaining.

PROVISION FOR IRRIGATION

If the Bone-Smith bill goes through as now written, the future development of the Columbia Basin irrigation project is certain. The bill provides a definite formula for contribution of a portion of the power revenues from Grand Coulee Dam to aid in reclamation of basin lands. This contribution will bring reclamation costs down to a point where settlers can make farming pay. Yet the bill prohibits increase in power rates beyond the present Bonneville schedules.

The Ickes bill ties in the Columbia Power Authority with the General Accounting Office in the usual way. This would prevent the Authority from operating with the freedom and efficiency of a private business. The General Accounting Office—slow, ponderous, and overloaded with work—would impose all the usual restrictions on the Authority. The T. V. A. has been fighting to free its hands of the interminable red tape of G. A. O. On the other hand, the Bone-Smith bill takes advantage of the T. V. A. experience and provides the same sort of accounting checks as a private business has. While funds of the Authority are adequately safeguarded, the

endless quarreling with G. A. O. about details is eliminated. * * * In other words, the Bone-Smith bill is designed to set up an agency which, as far as possible, will be as quick acting as the best sort of private enterprise.

THE LONG VIEW

The Bone-Smith bill has been drafted on the basis of the long view ahead, in entire disregard of personalities of present or future Cabinet officers. Remember that no matter how well or how little you like Mr. Ickes, no one knows how long he will be Secretary of the Interior.

Senator BONE and Congressman SMITH will be glad to hear from anyone interested in the issues involved in the two bills. They want to know how the people stand on the question of centralizing control of our State's most important resource in an official in Washington, D. C.

Petition of the Indianapolis Association of Credit Men for a Sounder National Fiscal Policy

---

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

Mr. LUDLOW. Mr. Speaker, I have filed today in the House of Representatives a supplemental petition signed by many outstanding businessmen of our city and State urging upon the Congress of the United States its obligation to bring about a sharp reduction in nondefense governmental expenditures. The signers are members of the Indianapolis Association of Credit Men, a large and influential group of business people which is taking the lead among business organizations throughout the country in calling attention to the perilous condition of our national finances and the danger of continuous spending vastly in excess of national revenues. Merritt Fields, the executive manager of the Indianapolis Association of Credit Men, is a keen student of the fiscal problems of government.

The objective of these businessmen is a reduction of at least $2,000,000,000 in the nondefense appropriations. Specifically, they invite favorable attention to the cuts proposed in itemized form by Dr. George S. Benson, president of Harding College, Searcy, Ark., in his testimony before the Ways and Means Committee on May 15, last. Those cuts foot up to a total of $2,031,000,000.

In their petition to Congress the Indianapolis businessmen say:

> We, the undersigned, at the suggestion of the Indianapolis Association of Credit Men, who have to pay, and will pay cheerfully, for the defense of our country, earnestly urge Congress to devote as much thought to cutting expenses as is devoted to raising taxes. That seems only fair.

On July 15 last I submitted to the House, with remarks which I deemed appropriate at the time, the first installment of these petitions, signed by many hundreds of businessmen, voicing the hope of business for a sounder and more judicious national fiscal policy. The signers of the supplemental petition which I introduced today are as follows:

Company	Address	Representative
American National Bank	Indianapolis, Ind	J. S. Rogan.
Associated Silver Co	Chicago, Ill	G. E. Herring.
Benson Hotel Corporation	Indianapolis, Ind	E. W. Benson.
Samuel Bingham's Son Mfg. Co	do	L. D. McShane.

Wings Above the World

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ARTICLE BY ARTHUR BARTLETT

Mr. REYNOLDS. Mr. President, in view of the fact that the Pan American Airways has operated so successfully in the Latin-American countries of Central and South America and the Caribbean, and in view of the further fact that the Pan American Airways has done so much to bring about, so to speak, a solidarity of friendship so far as possibly attainable between the 130,000,000 people of the North American Continent and those constituting the population of the Latin American countries of Central and South America and the Caribbean, equal in population to that of the United States, and in view of the further fact that all those who are familiar with our national-defense program and attempted national-defense perfection in the Western Hemisphere are well aware that the Pan American Airways has been of inestimable value to us because of its location of airports in all these countries, as a result of that interest and in appreciation thereof, I ask unanimous consent that there be published in the Appendix of the RECORD a very interesting article in reference to this development, entitled "Wings Above the World." The article appeared in the special feature magazine of the New York Herald Tribune entitled "This Week," issue of September 21, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From This Week in the New York Herald Tribune of September 21, 1941]

WINGS ABOVE THE WORLD—MEET JUAN TRIPPE, WHO HAS CARRIED THE AMERICAN FLAG, BY PLANE, TO MORE THAN 50 COUNTRIES AND FORGED A WORLD-WIDE NETWORK OF AIR TRANSPORT—A VITAL CHAPTER IN THE STORY OF OUR NATIONAL DEFENSE

(By Arthur Bartlett)

The giant flying boat slid down out of the sky, settled gently in the bay in front of New York's LaGuardia Airport, and taxied up to the dock. The passengers filed out—diplomats, military men, all sorts of dignitaries. As they passed through customs and came into the big rotunda, curious visitors craned their necks. "There's Jimmy Roosevelt." "There's So-and-So—and So-and-So."

Another passenger stepped through the door, a youngish-looking man in a brown suit. A pleased smile lit up his face as somebody stepped forward to grasp his hand. "I wonder who he is," a woman standing near me whispered to her companion. "I wonder if he is anybody." Her voice implied doubt—there seemed no air of importance about him.

Just at that moment somebody stopped him in front of the huge mural map on the rotunda wall—the map with its bold blue lines stretching out across the oceans and linking the continents, the map showing the 75,500 miles of routes flown by the planes of the Pan American Airways to 57 different countries and colonies. If the whispering woman had only known, that map was the answer to her wonderings. It was the record of how the unobtrusive man with the boyish smile had conquered the world. His name was Juan T. Trippe, president of Pan American Airways.

I didn't take it on myself to inform the woman that he was a world conqueror. I doubt that she'd have believed it, anyway. He doesn't look the part. He is too mild. Of course, his conquests have not been military. The ever-more-powerful fleets of airplanes which he has sent through the air have carried not bombs but business to South and Central America, the Orient, Europe, Africa, Australia. Yet it is a fact that Juan Trippe, more than any other one man, is responsible for the fact that today there are bases and flying fields in crucial spots which only yesterday were impenetrable jungles, barren islands, mountain wildernesses—bases and fields which military planes, defending the Americas, would find invaluable.

HAS WHAT IT TAKES

Only last month President Roosevelt announced that the job of ferrying bombers to the British in West Africa had been turned over to Pan American. It was a sensational development—almost as if the Government had commissioned a private company to operate a branch of the postal system. But Pan American had the bases—in this country, in Bermuda, and Brazil and Africa; it had the flying franchises that would be needed, even in Liberia; it had the organization necessary to procure and train and transport pilots and mechanics and ground crews which would assure delivery of the planes ready for immediate combat. Any other outfit, private or governmental, would have had to start from scratch.

I was in Trippe's office one day when a new foreign crisis had arisen. Our talk had to be sandwiched in between long-distance telephone calls and messages. "The State Department is calling * * *." "The Navy wants to know * * *." "The War Department says * * *." So it went.

His organization these days, with its far-flung outposts and rapid communications, is virtually an unofficial arm of the Government. The great air fleets, comprising some 150 planes including the biggest that are in the air anywhere today, play a vital part in the plans of our military strategists. Their pilots—reserve officers almost to a man—are not only just about the most highly skilled aviators in the world, but they know the lands and seas and peoples beyond our immediate frontiers, where our regular military pilots may not ordinarily go.

In the Pan American training school at Miami nearly 2,000 Army and British airmen will this year learn advanced navigation. In the big hangar at LaGuardia Field, N. Y., Pan American mechanics have been overhauling big clippers for the British—clippers which were available only because Pan American ordered them for its own use long ago, and has released them. And of course the clippers which it sends across the Atlantic, ferrying Government officials on their errands of defense, are doing a liaison job of incalculable importance.

"I wonder if he is anybody." Well, there are people who know. There are the Nazis, for instance, who, with their Lufthansa air lines, were entertaining rosy visions of being top dog in South American air transportation—a position of more than commercial importance, as they very well understood—until this soft-spoken American businessman came down and stole the show. Not that the Nazis have given up their visions even yet. Right now, it is commonly reported, they have plans to extend the Lufthansa lines after the war to make them three times as big as Pan American is today. But—Mr. Trippe is pretty good at having visions, too. That's why there is a Pan American today.

His vision probably was a rather vague one when, like many another American boy, he started building model airplanes back in 1910 or so. The real planes that occasionally flew overhead in those days were almost as crude as his models, but he believed in them and had his visions just the same. When he was 17, and a freshman at Yale, World War I came along, and he had his first chance to make the visions come true.

He left college to become a naval aviation pilot. After the war, he came back to Yale and organized a flying club. (He played football, too, and was prominent in other campus activities; but then, as now, he did his stuff unobtrusively, and without any big noise; his nickname at Yale was "The Mummy.") Planes have never been out of his mind since then. His father was a New York banker, so he did make a dutiful stab at settling into the banking business when he finished college, but aviation was still his vision. He made it his business, too, in the early twenties.

TAKING A CHANCE

To most of his friends, except a few young air-minded cronies, that seemed a silly thing to do. Commercial flying in those days consisted mostly of barnstorming—taking passengers up for joy rides. Trippe set himself up as the Long Island Airways, and announced that he was prepared to carry passengers to definite destinations. Three old Army Jennies served as his first air fleet. Trippe, himself, was general manager, pilot, and, most of the time, mechanic. Passengers were infrequent, and it wasn't much of a business. But aviation, as a means of transportation, he insisted, was going to develop.

It did, with his help; and in 1926 he became general manager of the first United States transport air line—the Colonial Air Transport, which ran between New York and Boston. His connection with Colonial lasted only about a year, because the conservative New England shareholders thought his idea of having tri-motored planes built and extending the line to Florida was entirely too visionary.

Trippe withdrew, and with a small group of other ex-war flyers, who put up $25,000 apiece, organized a new company. Plans were vague, but they all agreed with Trippe that there was a future in long-distance commercial flying, and they meant to get into it. In 1927, their ambitions jelled into Pan American, and they began flying mail and passengers from Key West to Habana, with Trippe as general manager. It was the first American venture at overseas flying on a regular commercial route.

In all the fuss of completing financial deals and setting up the company, Trippe found himself with just 2 weeks in which to build the air line if the mail contract was to be carried out on time. He had a skeleton personnel, some Fokker planes and a half-finished airfield on a mud flat at Key West.

But there were no passenger stations or hangars, no arrangements about ports of entry, clearance papers, and all the official rigamarole which had now to be worked out for the first time in American history for an international air line. Nevertheless, on deadline day a Pan American plane flew the 90 miles across the water from Key West to Habana. A week later, regular schedules were under way.

From that time on, the story of Pan American, under Trippe's guidance, moves just about as fast as it did during those first hectic weeks. By the next spring, Trippe was flying over Central America on a survey flight. European lines had been in the Americas to the south for several years, backed officially or unofficially by their governments. That they were going to be tough competition was obvious. They weren't there merely

to make a profit out of transportation. They were there to establish their governments in potentially powerful positions, and if profits had to be temporarily disregarded to do it, that was all right. Nevertheless, Trippe set out to overtake them, not as a government but simply as an American businessman. And he succeeded.

The story of exploration trips through the jungles of South America in laying out routes, of building airfields in place where white men had never before penetrated, of all the engineering marvels of Pan American's expansion to the South, is a story primarily of other men. Trippe thought up the trips, and sent others to do the jobs—impossible or not—and they did them. But in the meantime, Trippe was doing some impossible jobs himself. He and his team were winning franchises in competition with some of the most powerful governments of Europe.

There is, of course, no such thing as freedom of the air. No plane may fly over a foreign country without permission. Germany, Britain, France, and Holland—all arrived in South America ahead of Pan American—could bring diplomatic pressure to get franchises for their government-backed monopoly air lines.

Trippe was on his own. Here and there he bought up lines that already had franchises, looking ahead to the time when he might need them. (He had franchises in the Far East long before the trans-Pacific flights were even possible.) Elsewhere, he sold his air-line service as a business proposition to the governments concerned. He showed them what it could do to expedite business, how it could develop their countries. And he got the franchises—in every country in Central and South America. The lines themselves followed the franchises in.

For some of the survey flights, Pan American engaged Colonel Lindbergh to do the flying. Trippe flew with him, but you would hardly have realized it by looking at the papers of the day. The headlines were all on Lindbergh. Most accounts, near the bottom, added: "Also on the plane was J. T. Trippe, president of Pan American." But South America, even then, was beginning to realize that Trippe was "somebody."

When a Pan American plane flew the first air mail up from Buenos Aires in July 1929—less than 2 years after the first Key West-Habana flight—it included letters from the presidents of most of the South American republics to President Hoover. But it also included letters from those same dignitaries to Juan T. Trippe.

By February 1930 he was able to report an increase in the line's routes from 261 miles (Miami to Habana) to 13,000 miles, within a year. And by September of the same year, Pan American was flying through every country in Central and South America—and was the largest air-transport line in the world.

Next came the Pacific flights in 1936 and the Atlantic flights in 1939—recent events which need no retelling here. Today Pan American's lines stretch from Alaska to Argentina and New Zealand, from China and the Malay States to Portugal and West Africa—in normal times to Ireland, England, and France. And Trippe, chief thinker-upper of this vast chain of things that couldn't be done, is still looking into the future, looking ahead to other impossible tasks.

HISTORY REPEATS

Back more than a century ago Navy records tell of another Trippe—John Trippe, his great-great-grandfather—who commanded the United States ship *Vixen* in the war against the pirates of the Barbary Coast, and was awarded a gold medal and sword by Congress for his part in keeping open America's trade routes. Those were the days when American clipper ships were the best in the world—were carrying American business to the four corners of the earth, winning for America respect and friendship wherever they plied, and bringing to America an era of prosperity such as never had been known before.

"We can do it again," Juan Trippe says today. "Today we hold the leadership on the world's trade routes of the air. When this war is over, if we have held that leadership and can go on holding it, we will be the country that is doing the most to stimulate the trade and commerce which all countries must have to live. They will naturally look to us for leadership. It will be one of the greatest opportunities of all history."

That is what he is dreaming and planning and working for: A new era in which airplanes mightier than any yet seen will link the countries of the world, making ever more insignificant the geographical barriers that used to loom so large. A new world prosperity, in which America will be the leader—not as an overlord, but as an enterprising neighbor. And his dreams have a way of coming true.

Some weeks ago a controversy raged on the floor of the Senate. Another line wished to parallel Pan American's trans-Atlantic service. Talk of monopoly arose, and during the discussion it was suggested that a Government-controlled line might be the eventual answer to the problem of maintaining American supremacy on the trade routes of the air. Said one of the Senators: "If that ever happens, I certainly hope we can get Juan T. Trippe to run it for us."

Attitude of American Legion Toward Senator Clark of Missouri

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

LETTER WRITTEN BY JOHN J. WICKER, JR., OF RICHMOND, VA.

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter written by John J. Wicker, Jr., of Richmond, Va., which appeared in this morning's Washington Post, correcting the statement made in numerous daily papers with regard to the attitude of the American Legion at its recent national convention at Milwaukee toward the senior Senator from Missouri [Mr. CLARK].

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CHAMP CLARK

In recent articles regarding the American Legion National Convention at Milwaukee, many periodicals and newspapers erroneously stated that United States Senator BENNETT CHAMP CLARK was greeted with boos when he arose to speak in favor of a resolution against American aid to Russia.

As one of the speakers on the opposite side from Senator CLARK in this matter, I was seated on the convention platform at the time, and am glad to state that when Senator CLARK (who was the first national commander of the American Legion) was recognized, he was greeted not by "boos" but by widespread applause.

There was no booing until, in the course of his remarks, he expressed some very unpopular views. Thereupon, a few hundred out of an audience of several thousand exhibited their strong disagreement with his opinions by some short but loud booing. However, these boos died out quickly.

As a former State commander and national executive committeeman, and as one of the charter members of the Legion, who has attended every national convention, I can truthfully say that BENNETT CHAMP CLARK has the personal respect and confidence of the great majority of American Legionnaires. We disagree violently with his isolationist views and speeches, which many of us consider cockeyed in the extreme, but at the same time, we respect him for his unquestionable honesty, his courage, and his sincerity.

JOHN J. WICKER, JR.

RICHMOND, VA., October 3.

Freedom of the Press

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

EDITORIAL FROM THE PITTSBURGH (PA.) PRESS

Mr. DAVIS. Mr. President, last week was National Newspaper Week. I have read with deep interest the comments that have been made relative to this matter. Surely we are grateful in this country for the freedom of the press. We are indebted to the intrepid men who bring us yesterday's news in our morning newspapers. We know what sacrifices are necessary to a first-class job of reporting.

In our country we have many newspapers, too numerous to mention, which have made notable contributions to journalism. I wish to present for the Appendix of the RECORD an editorial—a reprint—from one of them, the Pittsburgh Press of October 4, 1941, entitled "Newspapers and Freedom."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pittsburgh (Pa.) Press of October 4, 1941]

NEWSPAPERS AND FREEDOM

Newspapers of the United States are observing National Newspaper Week. As they do so, both the newspapers and their 130,000,000 readers are facing the gravest situation which has confronted this country since 1861.

There is no longer any doubt that the American way of living—the life in which a man is free to choose his own livelihood and location—is opposed by another in which the state is altogether superior to the individual. The great peril in our own civilization is that in the effort to defeat the plan which makes the state all and the individual nothing, we may fall into the same path. We may arrive at the belief that to defeat the devil we shall have to use his fire—and if we do, everything that George Washington, Thomas Jefferson, James Madison, and Abraham Lincoln held dear will fall into fragments.

We lay down 3 cents for our favorite newspaper as a matter of habit, expecting it to put before us the latest information from every corner of the world. We look at the headlines, we laugh at the funnies, we swear at editorials, and run a finger down the batting averages. Only on the North American Continent does the worker and the housewife have that privilege.

Only in the United States and Canada today, in the Western Hemisphere, does the man and woman who make the world go round have the right to read the news of their neighbors approximately as it happens, without the slanting touch of a censor's pencil.

Is that important?

A minority of our people may think it is not. There are groups in the United States, called for convenience "isolationist" and "interventionist," which would limit the right of the press to report events which put their side in a bad light. There are people who think that the men and women of America cannot be trusted with the knowledge of events as they happen. But, we repeat, they are a minority.

The majority of the American people are awake today to what has happened in continental Europe since 1933. They are aware that the first move of the seizers of national power is the capture of the press. They saw the people of France betrayed by newspapers which took the enemy's money, either to remain silent or to misrepresent the facts from day to day. In Germany, they have seen the ruthless Nazi gang steal the newspapers which once not only represented, but formed, German public opinion.

They know that the dictators have attached the most severe penalties, short of death, to the crime of listening to news from abroad. They know that in one dictator country, now allined with democracies, all private radio sets have been confiscated, limiting the reception of news to the government-controlled loud speakers. They know that in all the dictator-controlled nations the press is as much an arm of the government as is the infantry, the navy, or the air force. There, it has ceased to be an agency of information. It is an instrument for the imposition of the dictator's will.

Mr. and Mrs. American like to consider that they know what is happening on the planet. They like to have opinions and they like to express them. They want the news, of neighborhood, village, city, county, State, Nation, and world—a circumstance which is abundantly attested by the fact that they buy more than 41,000,000 newspapers every weekday, more than 32,000,000 every Sunday and more than 20,000,000 weeklies.

There is more to it than the mere thirst for information. Our people know that when or if their source of primary information is taken from them, the process of destroying liberty is begun. Mr. American can sit any time with his pipe and his slippers and his favorite paper, secure in the knowledge that his freedom is his own. Tell him that he can no longer have the newspaper he wants to read, and he knows that more and worse is coming.

He knows that his spare time may no longer be his own. He knows that he can be called out to a party meeting or a parade before the local or national ruler, with a terrific penalty imposed for failure to obey the summons. He knows that when the newspaper comes under the state's dictation, the radio is equally or even more dominated by the tyrants in power.

Both the Nation and the press that serves it face the possibility of active war. Tradition and temptation both will be strong for the conversion of the American press to the European pattern if war does come. Many plausible reasons will be advanced for censorship and the use of the newspaper as a channel for propaganda, for the silencing of all criticism.

But the war to save democracy in the world cannot be won by destroying democracy here.

Oil Monopoly

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

EDITORIAL BY A. H. WHEELER

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting editorial written by A. H. Wheeler, editor of the Texas Citizen, Fort Worth, Tex., on the subject of Oil Monopoly.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Worth (Tex.) Citizen]

OIL MONOPOLY

(By A. H. Wheeler)

It appears certain, for the present time at least, that the final curtain has fallen on the boldest and most comprehensive plot of entrenched monopoly in the United States to use the Federal Government for selfish interests in building a 24-inch, steel-plate gas pipe line from the oil and gas fields of Texas to the Atlantic seaboard. This much is admitted by newspaper correspondents in Washington.

The Priorities Board has definitely declined the use of 700,000 tons of steel for the purpose, and only by the intervention of President Roosevelt could the decision of the Board be overruled, which intervention is almost certain not to occur.

For a number of years the large oil companies have been trying to get a huge pipe line built to the eastern seaboard, but they have run into many difficulties, chief of which were objections of certain States to the building of the lines across their domains. These objections were eliminated when the oil companies secured an order from President Roosevelt, under new Federal laws, declaring pipe line rights-of-way public domain through these States.

Then, in order to secure steel for the project, the oil companies had to go through the Priorities Board, and to gain that consent, the project had to be declared a defense necessity

Then, the oil companies made the boldest stroke of all. They declared a dangerous gasoline shortage in 17 States in the eastern part of the United States. They actually secured an order from the office of Oil Coordinator rationing gasoline in many eastern States.

This act aroused the entire country; the East because the people could see no reason for a gasoline shortage, and the oil-producing States, especially Texas, because they knew full well that there could be no gasoline shortage anywhere if the products of their fields could be made available.

A Senate investigation was demanded, and the investigation placed in the hands of a special committee of the Commerce Committee, of which FRANCIS T. MALONEY, Democrat, of Connecticut, was made chairman, and given the very able assistance of Senator W. LEE O'DANIEL, of Texas.

If Senator O'DANIEL is up on anything, it is industrial conditions of his own State, and he made good use of his knowledge in this committee hearing.

Following a lead that there were at least 20,000 railway tank cars standing idle on side tracks over the United States, the Senate committee summoned to testify before it Ralph Budd, president of the Burlington Railway and defense transportation adviser, and John J. Pelly, president of the Association of American Railroads.

These two gentlemen, constituting the highest possible authority in rail transportation quickly confirmed the prevailing opinion that the railroads had all of the facilities necessary for the delivery of all of the needed gasoline and oil products from the fields in Texas and Louisiana to any point in the East where a shortage was threatened.

With all of the information before it, the special committee quickly ruled that there was no gasoline shortage anywhere, and recommended the use of rail transportation facilities to supply the demand for gasoline and oil products wherever needed.

In spite of the unanimous ruling of the committee, a protest was registered by Ralph K. Davies, Acting Petroleum Coordinator, that the shortage does exist.

* * * * *

And since all of the above has happened, the oil industry has suddenly discovered many idle barges for inland water traffic, and on September 16, had loaded out a cargo of 3,000,000 gallons for shipment from New Orleans to Pittsburgh. It is very strange how much convenient transportation can be found when it is really desired.

The above episode brings to light a condition in the economic set-up of our country not immediately in sight, and of very grave significance.

First, it is definitely proved that there was no gasoline shortage at any time, and that the alarm about one was of artificial construction for a very definite purpose, that of building a huge pipe line to the industrial East from the oil- and gas-bearing sections of the South.

Secondly, there is no need, never was and never will be, of pipe-line facilities for the transportation of liquid petroleum products from the oil fields of the South to the Eastern seaboard, because barge and tanker transportation by water is much less expensive than pipe-line transportation, and tankers and barges cost much less to build than pipe lines, and can be built very rapidly of wood and concrete, using very little metal needed for defense purposes. This mode of transportation can easily and quickly and inexpensively be made available at any time, in sufficient quantity to handle all of the liquid petroleum products ever needed in the Eastern Atlantic seaboard States, even without the use of rail transportation, if deemed necessary.

The conclusion is that the powerful oil interests desired a gigantic pipe line from the fields of the South to the industrial East, not for liquid petroleum products but for natural gas, as was clearly established before the special committee by Senator O'DANIEL, of Texas, in the extensive hearing.

The purpose of that gigantic gas pipe line is, of course, to rob Texas and Louisiana of one of their most valuable heritages, natural gas, but that is not the half of it, as the matter affects all of the United States. This I hope to show in a few brief paragraphs to follow. This is the Texas viewpoint, and it is amply proved by the experience of other sections of the United States. Colorado, Michigan, Illinois, and other States which have gas pipe lines from the Texas fields.

The use of this very cheap fuel from Texas has produced a great hardship in these States and thrown tens of thousands of people out of work by closing coal mines. Some of these States have found it necessary to protect their own industries by passing laws taxing natural gas coming in from other States.

The facts and conclusions in this article are brought out by interviewing many of the very best authorities on the petroleum industry of the South and Southwest among the independent operators, and also high authorities engaged in the manufacture of steel and other products in the areas affected by the importation of cheap natural gas fuel in competition with their own abundance of coal, coke, and artificial gas. These facts are indisputable, and can be confirmed by consulting authorities in the affected areas.

Below I give a summary of the case as it affects a wide area of this Nation.

The oil monopolies have subsidiary purchasing companies that make monthly nominations in Texas of the amount of crude oil they require or will purchase. The nominations are ridiculously low, being about one-thirtieth of the maximum capacity of Texas oil wells, and the price for same being about $1.15 average per gross barrel.

The low allowables of Texas crude oil causes an economic waste; many wells destroy themselves on account of salt water penetration because they are not properly operated.

The small industries that are supported by normal production have to close when oil is produced in such low quantities at such low prices, causing unemployment and depressed business.

But how different with the major companies, who can transfer their tankers to England and to foreign countries to transport their own cheaply produced crude oil to our own seaboard, Canada, and England, and get up to $2.75 a barrel for it.

This can only be continued by eliminating Texas competition.

The oil and gas monopoly, interested in many large eastern industries and greater profits, think they see the opportunity to get a gas line for future use that will let them have cheap fuel, thus enabling them to compete with the coal industry which will destroy it and cause much unemployment.

This would protect their own eastern industries as against Texas and such a natural-gas line would lower the recovery of Texas crude oil.

There is no need for a major pipe line. Ships, tugs, and barges afford cheaper transportation rates, and we need more employment that a pipe line eliminates.

Also our railroads and trucking industry are greatly benefited in getting additional tonnage. Our Government should first think of employing our own citizens.

Small concerns now know and are demonstrating that petroleum can be transported by ships, tugs, and barges to many industrial areas at lower cost than by pipe lines, and can be delivered for short hauls to our railroad and trucking industries that will create competition to where the price of $2.75 on the eastern seaboard and $1.15 in Texas will be equalized, and both Texas and all other States will have competitive and uniform prices.

The Southwest is entitled to a fair proportion of industry—not just cantonments and temporary assembly plants. They want to be allowed and helped by our Government to tool up their present small industries to be able to do their share in the defense program. They ask for the opportunity to exist; they believe the O. P. M. is too close to big business and is discouraging Government assistance to these smaller industries.

Extension of Social Security

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

EDITORIAL FROM THE PHILADELPHIA INQUIRER

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Philadelphia Inquirer of October 3, 1941, entitled "For Social Benefits, Not Revenue."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Inquirer of October 3, 1941]

FOR SOCIAL BENEFITS, NOT REVENUE

Of the proposed extension of social security to bring its benefits to some 27,000,000 persons now outside the system, it is to be said at the outset that there can be no valid objection to such a measure of justice.

The principle of contributory payments by employers and employees for protection of the latter in old age has been accepted as a sound social reform. There is no reason for excluding any group of the Nation's workers from its operation.

The millions of proposed additional beneficiaries were not included in the original plan because of difficulties of administration and the fact that the plan was experimental, subject to changes as was later shown by the need for substantial amendments.

But if the time has now come when the Government can see its way to rounding out this admirable plan and removing present discriminations, the greatest care must be taken lest there be any departure from the plain purpose of the social-security system, or any confusion of its sole object with other governmental functions.

Particularly the danger of imposing any additional unnecessary burden on already tax-ridden business and workers should be guarded against, and the extra flow of funds into the Treasury from the pockets of millions of citizens should provide no opportunity for governmental extravagance and waste.

Unfortunately some proposals have been put forth that are extremely disquieting to those who would keep the principle of social security intact.

One is Secretary Morgenthau's suggestion that the rate of the social-security taxes be increased to supply more money for the defense program and also to aid in curbing inflation.

This is an utterly indefensible proposal. When the social-security system was first broached, fears were expressed that the huge funds it would produce might eventually be diverted to quite different purposes and constitute an invitation to stupendous governmental spending instead of being held in trust for the beneficiaries.

A social-security plan should not be converted into a device for raising revenue, whatever the Government's necessities. The two activities, from their nature, are as far apart as the poles.

The American people today are paying the heaviest taxes in their history to protect their country from war and before long will be paying much more. They do not begrudge their sacrifices so long as they know they are worth while.

They are being heavily taxed for defense. Well and good. There is no need to sugarcoat their taxes for this purpose or to levy any of them under a false label. To label certain levies as for social security, when the real purpose is to apply them to defense costs, would not be keeping faith with the people.

Nor is this the only consideration. Social-security taxes at the present rate are much higher than required to meet the benefits and administrative expenses and maintain an adequate reserve fund. The huge surplus goes into the Treasury and straight out again to help pay the Government's running expenses.

These taxes constitute a heavy burden on business, which receives no return, and on many employees who look for future benefits. This burden was recognized by Congress when it postponed a stepping up of the rates that had been fixed by the original schedule.

Obviously no possible need exists for increasing this burden now to insure the benefits of social security. Millions can be added to the rolls without raising the tax rates. The increased number of beneficiaries' and employers' contributions at present rates would of itself almost double the Treasury's revenue from this source.

As for a deterrent to inflation, it is true that higher social-security taxes would tend to diminish the public's buying power, but at the same time they would increase wage costs for the employer, and therefore the expense of production, and would make for higher prices, which are a form of inflation.

It is a question whether advocates of higher social-security levies have thought this matter through in all its aspects. For it is to be remembered that employers alone pay the 3-percent unemployment tax on their pay rolls and in addition a 1-percent levy for old-age pensions to match their employees' contributions.

It all sums up to this: Social-security benefits can be extended, but there is absolutely no excuse for boosting the tax rates. As for the proposal to help finance defense under the guise of social security, it is so pernicious on its face that it should not be given a moment's consideration by Congress.

National Unity, Now or Never

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ADDRESS BY FRED RIZK

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered by a distinguished citizen of my State, Mr. Fred Rizk, on the subject National Unity, Now or Never.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, distinguished guests, ladies and gentleman of the convention, it is an honor and a privilege for me to speak to you today on this, the tenth anniversary of the

founding of the Southern Federation of Syrian-Lebanon-American Clubs. And at the outset may I say that we have been indeed fortunate in our selection of a convention city, for here in this beautiful capital of the history-laden State of South Carolina and in the three host affiliate clubs, the Syrian-Lebanon American Society, the Syrian American Youth, and the Syriac Club, we have found a gracious welcome and a warm and generous hospitality that is of the essence of the South, unsurpassed and unsurpassable. To you, therefore, citizens of Columbia, may I, on behalf of the hundreds of your visitors, express a word of heartfelt thanks.

The federation has made tremendous progress since that memorable day, 10 years ago, when a small number of far-seeing, responsibility-conscious men and women, meeting in Beaumont, Tex., laid its foundations upon the cornerstones of fraternity, unity, charity, and patriotism. In the space of only a half-score years the federation has grown to become one of the largest organizations of its kind in the South today.

Yet, notwithstanding the rapidity of this expansion, it is happily evident that you, who have assembled here today from the far reaches of our beloved Southland, have not lost your zeal or enthusiasm or your burning desire for service. It is well, my friends, that you possess these passions for the grave problems of today desperately call for unity, zeal, and a burning desire for service.

I can recall no period in the history of the federation when its convention was called under more serious and thought-provoking national conditions than those which confront us as we meet today. In the short decade that has passed since that first convention history has marched with furious, unparalleled pace. Great black shadows have been cast over the greater part of the civilized world. Shadows of fear and want and hunger. Shadows of oppression, hate, and death. Shadows in which whole nations and peoples' theretofore living by the eternal standards of decency, order, law, and liberty, have been crushed under the heel of a ruthless conqueror. Cultural and political institutions embodying freedom of thought, freedom of expression, and freedom of worship, for which humanity's martyrs gave their lives to achieve, have been mutilated by this Frankenstein of destruction who knows no law and is conscious of no restraint. One by one the self-governing nations of Europe, by fire and bomb and insidious treachery, have been battered and broken and swept into his gaping maw. One by one they have been made to feel the lash of oppression, intolerance, greed, and a denial of decent fundamental rights. With a swastika installed in the place of Calvary's cross, with his vast evil power directed to dragging the civilization of the world back into the dens of ancient slavery and paganism, it is now abundantly clear that no nation which has not the will and the power to defend itself will be spared in his rapacious march to world conquest.

And while a fearful world is asking when will the monster be checked, when will come the deliverance, our President and our Congress, realizing the acuteness of the peril, have proclaimed a state of national emergency and have initiated measures to harness the Nation's resources to the end that it can and will defend itself.

Yet despite the fact that the Nation faces the most deadly and imminent peril in its entire history, despite the fact that the handwriting is plainly blazoned on the wall of destiny, despite the fact that the lesson of annihilation and doom to the disunited and unprepared has been repeatedly demonstrated to all who have eyes to see—the people of America stand today tragically lacking in that national unity—that indispensable oneness, that common facing in one outward direction, and that cheerful willingness to make substantial sacrifices to achieve security. The will of a nation to survive can best be measured by its ready capacity for great sacrifice. Let us not delude ourselves as to the danger, and thus gamble with posterity. It is high time that the policy of business as usual, the appalling dissension between labor and management, the constant bickering between persons in high position for political expediency, be discarded in the supreme interest of national unity and morale. For without these two we are wholly lost—and time is of the essence, for the shadows of Armageddon are lengthening. We cannot longer delay in putting our house in order. It is national unity—now or never.

In this grave hour we of the federation should well ponder our own responsibilities on behalf of the national program, for we are Americans, first, last, and always. Together with the Smiths, the Cunninghams, the McDermotts, and the O'Briens, we are products of the great melting pot that is America. We all share one thing in common: Our passionate lover for the freedom, the way of life, and the democracy that are set forth in imperishable line in the Constitution of the United States.

Ponce de Leon came in search of a fountain of youth; we came in search of a bill of rights. We came from a land over which 40 centuries of time have rolled, a land which say Egyptians and Assyrians, Babylonians, Persians, Greeks, and Macedonians, Romans, Byzantines, Arabs, Franks, and Turks in turn sweep over its terrain to pillage, suppress, and enslave. The heart of the peaceful native of that land cried out for peace, liberty, and security—and on these blessed shores they were found. On a family portrait of Joseph Arbeely, of Damascus, Syria, who was the first to bring his family to the United States, in 1878, we find this inscription in his own hand: "Here I and my children have happily found liberty." And so it has been with the more than 200,000 Syrian and Lebanese Americans who have taken permanent residence in the United States today. These loyal Americans, to be sure, are proud of their heritage and ancient lineage, proud of their enduring contributions to the progress of the world, which included the inventions of glass and earthenware, the alphabet, and commercial paper. They are proud of having given to mankind both monotheistic religions, and the beginnings of the moral and ethical codes that still control the world. They recall with pardonable satisfaction what Sir George Adam Smith was moved to declare: "Syria has been of greater significance to mankind spiritually and materially than any other country in the world."

Yes; they are proud of these things, but let me tell you that even beyond and above these they treasure their American citizenship and liberties. They will oppose any nation, whatever its previous ties, which threatens the democratic principles in which they passionately believe.

This has been demonstrated in the past few months when, after the fall of France, the traditional friend and protector of Syria and Lebanon for nearly a century past, the Nazis demanded the military use of the country. The Lebanese and Syrian people of the United States, through their organizations, particularly the Lebanese clubs, and at the instigation of their militant press, cabled the Vichy high commissioner, Gen. Henri Dentz, again and again to refuse the German demand and to stand fast with the forces of freedom and democracy. Thus, even a friendship of long standing was discarded in favor of democratic ideals by a liberty-loving people.

But now that we find these sacred institutions and liberties gravely menaced by a sinister force from across the seas and note those discordant elements in our national life which are tearing the national fiber apart, we are rightly fearful of the future. Can it be that our national leaders have not sufficiently made clear the danger to the people of the United States? Certainly, it is not sufficiently felt by them. Strong, clear, authoritative warnings in this direction, we believe, will serve to jolt the Nation out of its dangerous state of detached complacency, for when the people do fully realize the menace and its effect upon their country, their institutions, and their personal lives and fortunes, they will not countenance the tragic lethargy and division they now display.

We further believe that when a policy of preparedness has been settled upon, the people should be given as large a share as possible in its execution. Let the various civic, fraternal, and other representative organizations of the Nation be assigned tasks in the national effort of defense. Let the common responsibility be felt and shared by all. Let this great Nation of democracy-loving people be transformed into one gigantic organization which, putting aside personal gain and advantage, will direct its vast effort in the common defense of its cherished liberties.

Let this convention go on record therefore, Mr. President, calling upon the native and adopted sons and daughters of America to take on the spirit of sacrifice and to unite in heart and soul and mind in the great task of national defense that lies before us.

Let this convention go on record offering our services and facilities to the proper governmental agencies to effect a closer and more productive cooperation with the national program.

Let us also, Mr. President, urge upon our affiliates to contribute substantially to and otherwise support the United Service Organizations, the great army behind the Army, which this week known as National U. S. O. Week, commences its second drive, and also, to do their utmost in establishing local recreational facilities for the free use of men in the armed services of our country.

And lastly, let us break down every connotation of difference between ourselves and our fellow Americans, and reassert and repledge our allegiance to our country and its flag and dedicate our lives and our fortunes to their preservation.

If we stand united, my friends, in these dark days, they will surely pass and with their passing a new day will dawn, and in that beautiful dawn the Stars and Stripes of this glorious Republic will continue to wave in the morning breeze insuring the perpetuation of those lasting principles of justice, security, and democracy for the peoples of the earth.

The National Defense Program

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

RADIO SCRIPT PREPARED FOR BROADCAST ON HEADLINE GUEST PROGRAM, STATION WINX, WASHINGTON, D. C.

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in

the Appendix the radio program prepared for broadcast on Thursday, September 18, 1941, on station WINX, Washington, D. C., and participated in by Charles P. Clark, associate chief counsel of the Truman committee; Otis T. Wingo, director of public opinion analysts; and Miss Eleanor Bunker, headline guest interviewer, in which an outline was given of the work of the Truman committee.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Miss BUNKER. I want to thank you, Mr. Wingo, both on behalf of the chairman, Senator HARRY S. TRUMAN, who is, at present, on a defense inspection tour in the Midwest and the acting chairman, Senator JAMES M. MEAD, for the opportunity of acquainting the public with the committee's work.

Question. What were the reasons for the creation of the Truman committee, Mr. Clark?

Mr. CLARK. At the beginning of the national-defense program, Senator TRUMAN, as well as other members of the Senate, received many complaints that there was gross waste and extravagance in the expenditure of public money appropriated by the Congress for national-defense purposes, and that negligence and incompetency were bogging down the program. Small businessmen were complaining that their pleas to participate in the defense program were being ignored by Government officials charged with the awarding of defense contracts. Senator TRUMAN, recalling the scandalous conditions prevailing during the last war, which went unnoticed until the war was over, personally made a preliminary study of these charges and became convinced that an impartial, objective study and investigation of the entire defense program should be made—an investigation coexistent with the defense program. On February 10, 1941, Senator TRUMAN introduced a resolution in the Senate, authorizing and directing a special committee of seven Senators to make a full and complete study and investigation of the operation of the defense program, empowering such a committee to investigate the methods by which contracts were awarded, the efficiency with which such contracts were being performed, the extent to which the facilities of small business concerns were being utilized, factors which might unduly increase the cost of the program and other matters relating to the program which the committee might deem appropriate, and to report to the Senate from time to time the results of its investigations with suggested legislation.

The resolution was adopted unanimously by the Senate on March 1, 1941. A committee of seven Senators was appointed. Senator HARRY S. TRUMAN, the author of the resolution, was designated as chairman. Others appointed were Senators CONNALLY, MEAD, WALLGREN, HATCH, BALL, and BREWSTER.

Members of this committee are particularly well equipped to serve on a committee of this kind. Senators TRUMAN and WALLGREN are members of the Military Affairs Committee; Senator BREWSTER is a member of the Naval Affairs Committee; Senator CONNALLY is chairman of the Foreign Relations Committee, and Senator HATCH has served on several important investigating committees.

Question. Mr. Clark, what authority has the committee?

Mr. CLARK. The committee has authority to investigate any agency of the Government concerned in any way with national defense. Particular emphasis should be made of the fact that the jurisdiction of the committee covers the spending of over $50,000,000,000 of defense appropriations.

Question. What is the policy of the committee?

Mr. CLARK. The committee is concerned with offering constructive assistance to governmental agencies charged with the responsibility of administering the defense program so that they may carry the program into execution as effectively as possible. In addition, the committee is vitally concerned with eliminating all bottlenecks so that private industry can exert the maximum effort under the defense program with a minimum of dislocation. The committee is particularly interested in seeing that a small American businessman is given an opportunity to make his contribution to the success of the program.

Question. Is the committee a prosecuting agency, Mr. Clark?

Mr. CLARK. The committee is an investigating, not a prosecuting body, but if evidence of criminality is found, such matters will be referred to the proper prosecuting officials.

Question. I understand, Mr. Clark, that the committee investigated the camp-construction program of the War Department. Would you care to discuss something about this investigation?

Mr. CLARK. Yes. One of the committee's first problems was the investigation of reports directed to the committee complaining about the inordinately excessive costs of the War Department's camp construction program. Committee investigators were sent to Army camps in various parts of the country, such as Fort Leonard Wood, Mo.; Fort George Meade, Md., Indiantown Gap, Pa.; Camp Blanding, Fla.; Camp Stewart, Ga.; Camp Hulen, Tex.; Camp Wallace, Tex.; Camp Davis, N. C.; and Camp San Luis Obispo, Calif., to inspect sites, to inquire into construction progress, to determine the efficiency with which contracts were being performed, and to develop facts relating to reports of excessive expenditures in the procurement of camp sites and prices paid for building materials and construction equipment. Charges of alleged labor racketeering were carefully investigated.

As a result of these investigations, public hearings were held in Washington at which time War Department officials in charge of the camp construction program, contractors, and other parties in interest appeared before the committee.

Question. With what result, Mr. Clark?

Mr. CLARK. On August 14, 1941, Chairman TRUMAN presented the findings and recommendations of the committee to the Senate. The report disclosed that the War Department had wasted in excess of $200,000,000 due, in a large measure, to lack of proper planning.

Question. Would you mention an instance of improper planning, Mr. Clark?

Mr. CLARK. The committee found that the War Department, in selecting camp sites did not make full utilization of engineering and topographical data which could have been developed by the Engineering Corps or could have been obtained from other governmental agencies. Fort Leonard Wood is a case in point. This fort was originally located in Iowa, but an engineering survey made after the camp was located at this site showed an adequate water supply could not be developed and it was necessary to move the location to Missouri.

Question. I understand that the War Department spent large sums of money for renting construction equipment. Did your committee study this phase of the construction program?

Mr. CLARK. Yes, indeed. In the course of the camp investigation, it was found that nearly $50,000,000 had been expended by the War Department for rental of construction equipment. Evidence adduced at the hearings showed that the War Department could have saved at least twelve or thirteen million dollars by purchasing instead of renting this equipment.

Question. Were any definite recommendations made to obviate these conditions?

Mr. CLARK. The committee's report severely criticized the Quartermaster Corps of the Army, and recommended that camp construction and maintenance should be taken out of the Quartermaster Corps and vested in a new division better equipped to cope with the problems.

The committee is now informed that the War Department has adopted this recommendation and legislation has recently been introduced for the purpose of taking such jurisdiction out of the Quartermaster Corps and vesting it in the Engineering Corps.

Question. Mr. Clark, did the committee investigate reported charges that intermediaries were employed to obtain Government contracts?

Mr. CLARK. The committee, in the course of its camp investigation, found that some individuals, principally here in Washington, have represented themselves to contractors as having influence with various Government departments and have been retained by such contractors on a fee basis. It was found that one of the most prominent of these intermediaries, a former general in the Army, had destroyed his files prior to being called upon to testify before the committee. However, the committee has found that this individual has received payment from a large number of contracting firms who have been successful in obtaining Army contracts. The committee is presently engaged in collecting facts and investigating the activities of a number of such intermediaries who represent themselves to contractors as being able to influence Government officials in the awarding of contracts. We feel that the committee has discouraged this practice.

Question. Is the committee making a study of Army ordnance plants?

Mr. CLARK. In line with its investigation of the camp-construction program, the committee is engaged in a Nation-wide investigation of charges of gross waste and inefficiency in the construction of Army ordnance plants.

Question. We were all interested in the committee's investigation of the aluminum situation. Would you mention something about this investigation, Mr. Clark?

Mr. CLARK. The committee was in receipt of conflicting opinions concerning the adequacy of the supply af aluminum, not only to meet military but civilian demands. Attempting to reconcile these conflicting views, the committee conducted an exhaustive investigation to determine just what the true situation was, regarding the available supply of aluminum.

Statements were made by high Government officials charged with the responsibility of ascertaining whether there was an aluminum shortage in this country that there was no shortage.

They even went so far as to say that it was unpatriotic to talk about a shortage. We even had the ironic situation of one of these officials sending a telegram commending another official for the fine work he did in ascertaining that there was no aluminum shortage.

The results of our investigations and public hearings proved incontrovertibly that there was an aluminum shortage and a very acute one—that there was not even sufficient aluminum for direct military requirements, let alone civilian requirements.

Question. Was the Aluminum Co. of America responsible in any way for the shortage?

Mr. CLARK. The committee found that the Aluminum Co. had convinced the Office of Production Management of the adequacy of the supply, their purpose being to discourage competitors who were attempting to enter the aluminum field.

Question. What did the committee specifically recommend to increase aluminum production, Mr. Clark?

Mr. CLARK. In its report to the Senate on June 26, the Committee recommended that new facilities be created immediately to produce an additional 600,000,000 pounds of aluminum to meet immediate military requirements. The O. P. M. announced plans for the construction of eight new aluminum plants to produce these additional 600,000,000 pounds annually, but the committee believes progress in this respect has been unduly slow and has cost us several times as much aluminum as was obtained from the pots-and-pans program.

Question. I understand, Mr. Clark, that huge power facilities are necessary for the production of aluminum. Did the committee make a study of the feasibility of developing new power projects?

Mr. CLARK. Here again testimony was presented with respect to the failure of the Aluminum Co. of America to develop one of the most vitally important and necessary power projects, the Fontana water site on the Little Tennessee River.

Testimony before the committee had shown that there was much indecision and inactivity on the part of the O. P. M. as to the best method of developing this water site. The committee recommended that the O. P. M. work out a plan immediately with the Tennessee Valley Authority, which was best equipped from an organizational and facility standpoint to undertake the development of this project.

Mr. Knudsen, a few months back, advised the chairman of the committee that O. P. M. would follow the committee's recommendations regarding the Fontana project and would recommend to the President that an appropriation be secured to enable the Tennessee Valley Authority to develop this vitally important Fontana project. It is our understanding that this has been done.

Question. Will the committee in the course of its investigation of the national-defense program make a study of the productive capacity of aircraft plants?

Mr. CLARK. The committee is obtaining information concerning the aviation industry to determine whether every available productive facility is being utilized. The committee has already held hearings on the west coast at which time much testimony was adduced concerning the problems of aircraft manufacture.

Question. Is the committee interested in the priorities problem, Mr. Clark?

Mr. CLARK. The question of priorities, particularly as they affect small business, is of great importance. The President of the United States has very recently directed a reorganization of the Priorities Division of O. P. M. in an attempt to unfreeze materials and stimulate production in the field of small business. However, this new plan contains no provision for enforcement. The committee has had the priority question under consideration for some time and has recommended that enforcement machinery be created which will insure participation in the defense program by small business.

Question. Mr. Clark, does the committee contemplate making an investigation into the background and business connections of dollar-a-year men?

Mr. CLARK. Yes; the committee has been collecting information about dollar-a-year men for the past 2 months.

Question. Will the committee make an investigation of the Defense Housing program, Mr. Clark?

Mr. CLARK. An extensive investigation of the Defense Housing program has been made by committee investigators during the past several months. Investigation discloses confusion and lack of coordination in the administration of this vast program. This in turn has led to delay in the building of necessary housing units. Lack of coordination has prevented the adoption of a priorities rating plan for building materials used in the construction of defense units with the result that private building is at present in a state of almost complete chaos.

The committee investigators have also probed charges of excessive cost and improper location of sites as well as allegations of favoritism in connection with the awarding of defense housing contracts. The committee will hold public hearings on the entire defense housing program beginning Thursday, October 2.

In conclusion, it is the intention of Chairman TRUMAN and the other members of the committee that our Government get dollar for dollar in this defense program.

The Attitude of Colonel Lindbergh Toward Hitler

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

EDITORIAL FROM THE TAMPA (FLA.) SUNDAY TRIBUNE

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Hon. E. D. Lambright, very able editor of the Tampa Sunday Tribune, published on September 7, 1941. The editorial is entitled "Here's Lindbergh's Answer."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Tampa (Fla.) Sunday Tribune of September 7, 1941]

HERE'S LINDBERGH'S ANSWER

We have another letter from the America First Committee—the Wood-Lindbergh or "America Last" Committee. Our correspondence with that group has finally brought forth what we think is the first statement by or from ex-Colonel Lindbergh as to why he has, in all his speeches, carefully avoided any criticism of Hitler and his associated dictators. Many attempts have been made to bring the ex-colonel into the open on this point—and we take some pride in the fact that our effort in that direction has been successful.

Readers will remember that the America First Committee, in a letter, took exceptions to a Tribune editorial in which we criticized the Lindbergh attitude and asked the direct question why he had not denounced Hitler and Hitlerism. That letter sought to defend Lindbergh's attitude, but ignored the question. We replied, calling the attention of the committee to the fact that the question remained unanswered. Now we have another letter from the committee. The previous letter was signed by a Mr. Whiteway; this one by a Mr. Laurence B. Holland. We have no doubt that it was either dictated or approved by the decorated ex-colonel himself.

Here's the Lindbergh explanation of the Lindbergh silence on Hitler, quoted verbatim:

"Mr. Lindbergh does not denounce Hitler and Nazi Germany, though he has denounced Hitlerism wherever found, because: (1) His time is limited; (2) study of United States history and diplomatic history shows that this Nation has often found it necessary and even effective in the interests of international peace to cooperate with nations whose political, social, religious, and military designs are in direct contradiction to ours, and even are an admitted enemy to our Nation and way of life; communistic Russia, with its aims at international revolution, and its spies and agents active in the United States, is an example; in view of these considerations, plus the fact that he believes that this Nation may in the near future find it possible and advisable to cooperate with a German-controlled Europe to protect the interests of democracy and peace, Mr. Lindbergh smears or vilifies or denounces no foreign leaders; (3) military experts are almost unanimous, and economic experts are predominantly agreed that this hemisphere will never be dominated by Germany or any power unless the United States, because of some inner collapse, fails to exert its powerful military, diplomatic, economic, and cultural influence in this hemisphere; accordingly, Mr. Lindbergh does not insult the American people by subjecting them to a fear-provoking barrage of vituperation which only serves to preclude the possibility of rational thinking and vigorous determination on the part of the people—qualities highly important in any crisis—and which prevents the Nation from ever pursuing the positive and constructive efforts which must be made to save democracy in this country and to extend it on an international scale by taking steps to extend it in this hemisphere where our efforts are insured of a measure of success."

HIS REASONS ARE MISERABLY WEAK

Let's go into these "reasons" a bit. To our mind they are miserably weak; they do not satisfactorily explain, to the loyal American mind, why this American citizen, who has been highly honored by his country, who has held a commission in its armed forces, who boasts of devotion to America First, has not yet said one word of censure or even of mild criticism of the dictators, their totalitarian governments, or their current campaign, by armed might of conquest, to conquer and enslave the world. We quote literally:

"Mr. Lindbergh does not denounce Hitler and Nazi Germany, though he has denounced Hitlerism wherever found." We don't get the distinction. "Hitler and Nazi Germany" surely are "Hitlerism," whether you spell it with a large or small letter. If he doesn't denounce Hitler and Germany he can't denounce "Hitlerism." They are one and the same.

"Because: (1) his time is limited." That is the most picayunish and absurd of excuses. Lindbergh has found an abundance of time to denounce the policy of his Government, to assert his belief in the defeat of Great Britain and the triumph of Germany, to decry and belittle national activity for national defense, to attack the President and other leaders who are striving to unite the country for our own protection—but he does not denounce Hitler because "his time is limited." Phooey!

"Because: (2) this Nation has often found it necessary in the interest of international peace to cooperate with nations whose political, social, religious, and military designs are in direct contradiction to ours; communistic Russia." The inference clearly is that, because we are not at the moment fighting or opposing Russia, for obvious reasons, it might be advisable for us to "cooperate" with Nazi Germany or Fascist Italy—in other words, negotiate with them for peace on their own terms, "beg for crumbs from their table," as the President put it, which would mean the surrender of every principle for which we have stood and fought through all the years of our history—a consummation which the America

First Committee evidently would be delighted to see come to pass. Lindbergh and the committee say just that in these words:

"Plus the fact that he believes that this Nation may in the near future find it possible and advisable to cooperate with a German-controlled Europe to protect the interests of democracy and peace." There the feline flops fully out of the sack. Lindbergh and his promoters and echoists have believed all along, and have said so, that Britain cannot win the war, even with our help, therefore that Germany will win it, and that there will be a "German-controlled Europe." Hence, they want this Nation to kowtow now to the inevitable conquerors, quit all effort at resistance to their nefarious purposes, join with them in their totalitarian concept and design of how to "protect the interests of democracy and peace." Could there be a more abject surrender of our national integrity, a more contemptible negation of our national history and principle?

WHAT CHANCE TO SAVE DEMOCRACY?

The third Lindbergh "because" is his belief that "a fear-provoking barrage of vituperation" (of Hitler et al.) would "prevent the Nation from ever pursuing the positive and constructive efforts which must be made to save democracy in this country and to extend it in this hemisphere where our efforts are assured of a measure of success." In this, the ex-colonel presumes that, if his prediction of a Hitler victory comes true, we could still save democracy or extend it in this hemisphere or anywhere else. Knowing the Hitler motive, method, and purpose as he must know it, surely Mr. Lindbergh cannot sincerely believe that, with Hitler master of all Europe, including Britain, we would have the slightest chance of saving or extending democracy, or anything else noble or uplifting or free, in Latin America, or even in our own territory.

No; we can't admit or recognize the validity or virtue of the Lindbergh reasons for his refusal to join with the great mass of right-thinking Americans in condemning Hitler and all his works; but we are gratified that we have been instrumental in having him make public those reasons, such as they are.

In his latest speech, the ex-colonel predicted that England would turn against America. That should occasion him neither surprise nor alarm. He has.

Aid to Britain

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ARTICLE BY RAYMOND CLAPPER

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article written by the able author, Mr. Raymond Clapper.

Mr. Clapper has recently returned from a visit to England, and what he has to say respecting the amount of aid going to Great Britain from this country is especially significant. Mr. Clapper's observations coincide with what was disclosed during my own investigations.

Up to this date, Mr. President, we have not given to Great Britain the military equipment and supplies she so desperately needs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES ARMS REACHING BRITAIN CALLED "A POPGUN ARSENAL"

(By Raymond Clapper, Scripps-Howard Staff writer)

WASHINGTON, September 16.—The fact that we have delivered relatively little lend-lease aid to Britain is well covered up in President Roosevelt's report on 6 months' operation of lend-lease.

The figures, in terms of appropriations, allocations, and transfers, are large. In terms of deliveries, they shrink like a pair of wool socks in the laundry.

With regard to food going to England, the report is downright misleading. The President's report says that hundreds of thousands of tons of food have gone across the Atlantic. But on the same page the figures, which look large in pounds, reduce down to less than 150,000 tons. In England I was reliably informed that about 300,000 tons of lend-lease food have arrived. That is equal to 2½ days' consumption in England. No reference, naturally, is made in the report to the fact that for a time 25 percent of the eggs we sent arrived in England unfit to eat. That situation has been corrected, and the British have done their part in trying to cover up the affairs to save the American Government from embarrassment.

Food doesn't have to wait until factories are built. We are wasting it here, gorging ourselves. The British need it, especially for their heavy workers. Most of the people have enough to get by. Consumption has been cut 25 percent, but England is not starving. Heavy labor, however, is not being fed enough energy to do a good day's work. Children are not receiving the milk their bodies need. They need dried milk from here in far larger quantities than we are sending.

Under our lease-lend program we have allocated an amount of food equal to about 5 to 6 percent of England's annual consumption. Yet lend-lease has been operating half a year and we have sent just about 1½ percent of England's annual consumption in those 6 months.

The President's report does not mention numbers of planes sent, for obvious reasons. I am not permitted to mention numbers either. But I think the facts would support the statement that of needed types we have sent barely token quantities. I refer to heavy bombers and to high-altitude fighters. Britain badly needs more tanks, even though she is producing several times as many as we are. So far as the British are concerned, ours still is a popgun arsenal.

Take the President's own figures on total exports, lend-lease, and all others. His figures show that the total exports to the British Empire are but slightly higher than a year ago. Shipments to the British Empire in July of last year were in fact a trifle more than those of July this year. The other months this year look better but only by small margins.

Unfortunately, to say these things may give some comfort to Hitler. But it will be short-lived comfort if criticism now spurs us to greater effort, to the kind of job of which we are fully capable once we are truly determined to do it. Only now is the Government, after a year and a half, bringing in a cut of nearly 50 percent in automobile production. The British are making but 400 passenger cars a year, those largely for export. They have converted their industry far beyond anything we have even thought of.

I am not here getting into the argument about whether we should go fully into the war. I am talking about a policy adopted by Congress and for which $7,000,000,000 was appropriated nearly 6 months ago, and for which Mr. Roosevelt is about to ask several more billion dollars. Without our supplies the war against Hitler cannot continue. We have made it a policy to furnish those supplies.

The British may have no legitimate kick if we do not go to war. But they have a legitimate kick if we fail to deliver the goods as promised.

We have not set ourselves an impossible task. It is only that we have dawdled at it, cluttering it up with compromises, with red tape, with delays amounting to weeks in even getting orders through the White House and into the hands of the contractors. Perhaps the new production set-up will improve the situation. There certainly is plenty of room for improvement.

Continental Solidarity

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ADDRESS BY HON. JOSEPHUS DANIELS

Mr. CONNALLY. Mr. President, a few days ago I received unanimous consent of the Senate to have printed in the RECORD a notable address made by Hon. Josephus Daniels, Ambassador of the United States to Mexico, before the convention of the American Legion in Milwaukee, Wis. The subject of the address was Continental Solidarity. I now have received from the Government Printing Office a statement that the speech exceeds the usual limit, and that the cost of printing it in the RECORD will be $165. In view of the estimate, I now renew my request that I have consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Commander, comrades, and shipmates, I count it a high privilege, animated by the spirit of the American Legion and devotion to the democratic principles of our country, to hold fellowship again with my comrades and shipmates as you hail the coming of the unity of all America, from Alaska to Argentina. This is a goal to which forward-looking men have aspired since colonialism and imperialism were driven from the New World.

You Legionnaires have been through the crucible of battle. You are the men who, more than others, realize that our day of need is here. You are the men who know that our concerted efforts and sacrifices are required in this hour to give us the mighty sinews of war to uphold our way of life. You are the men who know that not only concerted action on our part, but also on the part of the peoples of all the Americas, are vital to safeguarding those things which constitute our very existence. You, and all patriots, therefore, celebrate with enthusiasm the advent of continental solidarity.

Your countrymen, grateful for your valor in the World War, look to you for leadership in this critical period in the history of the world. You did not fail them in 1917–18. Please God, you will not fail them now.

In our sincere confidence in the innate good faith of mankind, the majority of us forgot after the armistice that it was only through steadfast and constant preparedness that we could preserve, not only for ourselves but also for our neighbors on this continent, those very things which mean a free way of life for the happiness of the individual. This forgetfulness was not true of the Legion. Its members returned from the armstice with a knowledge born of bitter experience that the only answer to greed is force—force to the limit.

From the day visionless Senators denied the United States the high privilege of taking its seat at Geneva to cooperate with other nations in the insurance of world sanity and undergirding the plighted pledge of universal peace, the American Legion has steadfastly, persistently, and constructively urged in more quiet days the full measure of preparation for defense which is now rapidly being achieved; but achieved now in the face of world conflict and desperate need for haste, with resultant added expense and increased difficulties to the national economic structure. It must be a matter of profound satisfaction and just pride that where others failed to see the necessity of preparedness the Legion foresaw the dangers which beset us today and sought to make ready against the hour of peril.

The naval program of 1915–19 would have given the United States the most powerful Navy in the world, but short-sighted men sank fighting ships nearing completion and steadily reduced naval strength to dangerous proportions.

Then the American Legion protested.

Decreased appropriations weakened the Army after the armistice to the point where military leaders warned of the loss of needed strength.

Then the American Legion protested.

Air power which the United States gained in the World War was permitted to lapse and the essential expansion needed and urged by military strategists and civilian leaders was neglected.

Then the American Legion protested.

Isolationists from 1920 to 1933 denied the sound doctrine of Washington "To be prepared for war is one of the most effectual means of preserving peace."

Then the American Legion protested.

The Legion declared again and again that the surest way to keep war from this continent was by such preparedness as would be an insurance against the dangers of war. The urging of the Legion, born of experience forged in the furnace of war, fell on barren ground, and it is because of that neglect in the years since 1920 that we are now feverishly bending every energy into production of weapons for our defense and to render aid to other countries fighting for their very lives. Belatedly we, one and all, pay tribute to the prophetic warning of the Legion in all the years since members of the American Expeditionary Force in a gathering at Paris laid the foundations of your organization.

We must not feel, however, that our rearmament should be or is limited to iron and steel. We have another type of armament and one which strengthens us beyond any material weapon. It is the arsenal of full cooperation of all the people of the New World in mutual defense against the permeation of imported "isms" or alien symptoms of government. A common experience and a common history and a common sacrifice contribute to unified action. All these republics have felt the sting of government imposed by imperialistic foreign rule. They all won their independence through the hard road of conflict by the exhibition of a noble courage. Their descendants, proud of their heritage, are ready now as were their forbears to make any and every sacrifice to preserve for themselves and their children the freedom won by their fathers.

With three continents burning up in the fires of war and their peoples raging with hate or suffering under oppression, this convention of Legionnaires, who have been tried in the furnace of battle and come out purified, gathers in the comforting and inspiring knowledge that the heart's desire of all Americans from Alaska to Tierra del Fuego, is consecrated to continental solidarity—solidarity to uphold and undergird democracy and the right of every man and peoples to self-government. Each and all have joined in the high resolve to stand together against any totalitarian invasion by propaganda, gun or bombs, and in the solemn consecration that in mutual protection any attack upon one will call into action the combined resistance of the other 21 republics.

This achievement of oneness did not come by chance. Nothing good happens in God's world—all blessings come from forethought and sacrifice. A century before the epoch-making gathering at Panama and at Habana in 1939–40, there were prophets who envisioned the cooperative "one for all and all for one" which we celebrate today. Monroe, in 1823, had the vision splendid and we have lived to see his doctrine move from unilateral to multilateral and become the possession of the whole hemisphere. Early in his administration President Roosevelt made it clear that the Monroe Doctrine was "for the Western Hemisphere against outside aggression; not as a weapon to be employed by one American Government against another."

Bolivar, justly called "the liberator," sensed the need of a hemispheric solidarity when he summoned the Congress of Panama in 1825 to bring that blessing into being—the cooperation in this hemisphere which now gladdens our hearts and strengthens our faith in the immortality of democracy.

Bolivar, who was a century in advance of his age, devised a plan by which all the republics of Ame ica would form a united front for mutual assistance against encroachment or penetration by what he called "the decadent philosophies of the Old World." Lack of communications and transportation and barrier of language, accompanied by misunderstanding of Bolivar's lofty and patriotic goal, conspired to prevent the full fruition of his shibboleth, "Union, union, union," in his day.

But no noble concept dies, no great dream perishes with the dreamer, no vision glorious fades permanently. A century and more after shortsightedness failed to achieve the ideals of Bolivar in that very Panama, representatives of all the Pan-American countries came together at the most appropriate of sites—the base of the monument erected to Bolivar—and doing obeisance to their immortal predecessor, to make the solemn pronouncement that enables us in these our times to celebrate the day for which past generations had waited—the day when our ideals and understanding give us shelter, sure and safe, from the destruction which befell those nations in Europe which failed to form an unbreakable league against the ruthless rule of force.

If it be given to those who have gone before to know what is transpiring in this sphere I can imagine the thrill that came to Simon Bolivar as he sensed the fulfillment in essence of his heart's desire. God willing, the spirit of Bolivar, as manifested at Panama, will guide us through the stormy seas of this tragic era and assure the American republics the enlargement and perpetuation of the liberties for the attainment of which Washington and Bolivar and Hidalgo gave the full measure of devotion.

Before Lima, before Panama, before Habana, before continental solidarity, and long before the flames of war lit up the horizons overseas, it was certain that some day a new doctrine must possess the hearts and souls of the peoples of Pan America. On March 4, 1933, in an historic inaugural address, President Roosevelt enunciated a policy which has been the guiding star of this period. It was given the name of the "good neighbor" policy.

He said:

"In the field of world policy I would dedicate this Nation to the policy of the good neighbor—the neighbor who resolutely respects himself, and, because he does so, respects the rights of others—the neighbor who respects his obligations and respects the sanctity of his agreements in and with a world of neighbors."

With these words, the old slogans which had kept neighbors apart were sent into the discard and made as dead as any dinosaur. The policy of the good neighbor drove out the old slogans of "the big stick," "the big brother," "dollar diplomacy," replacing them with a brotherhood of equals, fraternizing to make a hemisphere consecrated to the defense of equal sovereignty and the preservation of the American way of life. The threats of spreading war have cemented the compact initiated at Panama and strengthened at Habana in 1940.

That declaration of President Roosevelt supplemented and implemented the voluntary pledge of Woodrow Wilson at Mobile in 1913, when he said, "The United States will never again consent to seek 1 additional foot of territory by conquest."

As far back as the close of the year 1933 President Roosevelt made this commitment:

"It has seemed clear to me as President that the time has come to supplement and implement the declaration of President Wilson by the further declaration that the definite policy of the United States from now on is one opposed to armed intervention."

Skeptics abroad and imperialists at home accepted neither the Wilson nor the Roosevelt declaration at face value. "We have heard fine protestations of brotherhood before," said the unbelievers, and imperialists in the United States gave grounds for pan-American skepticism when they declared that Uncle Sam would send his marines wherever an American dollar was invested. When our President, in the Platt amendment, cut the strings that bound Cuba and withdrew the marines from the Caribbean and declared that never again would the United States intervene by force, the old misunderstandings disappeared, and today there are no differences between the states of this hemisphere that cannot be settled by the arbitrament of reason without resort to arms.

Later, speaking to the whole hemisphere, President Roosevelt declared that no one group or race in the New World had any desire to dominate the others, saying that the only goal sought is the never-ending bond of "good, old-fashioned neighborly friendship," and he declared, "So bound together we are able to withstand any attack," and "together we will be able to ward off any infiltration of alien political and economic ideas that would destroy freedom and our democracy."

The noble conception of the good-neighbor policy of President Roosevelt likewise burned in the hearts of great men in other pan-American republics. It was voiced about at that time by Dr. Saavedra Lama, Argentine Minister of Foreign Affairs, in a statement in which he said the good-neighbor declaration has "brought about for the first time a current of community ideas and sentiments without suspicion and without ill will."

That sentiment has been implemented by recent statements of leading statesmen and peoples of our sister republics. As you know, I have been the "good neighbor" Ambassador to Mexico for more than 8 years, and I think I am in a position to give you at first hand

the views of Mexican statesmen on this subject.

His Excellency, ex-President Lazaro Cardenas, in an international broadcast addressed to all the nations of the Americas on June 9, 1940, said:

"Mexico has faith in the future of the democratic institutions and participates eagerly in this work for peace and well-being that is stirring the inhabitants of this continent; and in the face of the serious problems that shake the earth as a result of the European tragedy, believes that the people of our America have the unavoidable duty of maintaining themselves in close understanding, constituting a single defensive front that will protect them against any violent and arbitrary intervention by alien forces that at any moment might attack the sovereign rights of our peoples who are united by the profound bond of their own liberty.

"Maintaining and strengthening the bonds of cooperation and friendship between the countries of America must constitute the most fervent desire of all the people of good will to whom this sincere message is addressed in the name of the Mexican nation."

His successor, President Avila Camacho, in his patriotic inaugural address, rang true in his well-known devotion to democracy and pan-American unity in his message to the Mexican Congress this month, September 1, 1941. He said:

"I consider it appropriate to reiterate that Mexico is ready to give her full support to the defense of America, thus strictly following that line of conduct which she has held from the beginning of the struggle which is afflicting the world—vigilant observation of those conflicts going on beyond the continent, but energetic collaboration in the exercise, the strengthening, and the guaranteeing of those democratic principles which serve as a basis for the union of the American peoples. Aware of our limitations and pacifists by desire and tradition, we wish to keep ourselves apart from any armed struggle; but, jealous of our independence, we will not omit a single effort for the maintenance, together with the inviolability of our territory and the sovereignty of our government (literally, institutions), of the integrity of America, and sacred right of thinking and of acting as freemen in a hemisphere where there is affirmed the great ideal of liberty and of justice."

The Secretary of State for Foreign Affairs, His Excellency, Ezquiel Padilla, a man of wide experience in the service of his country at home and abroad, has reiterated his position and that of his country on numerous occasions. I quote for you some excerpts from statements made by him:

"The reaction against Nazi propaganda throughout the Americas is the strengthening of American solidarity. * * * Our conscience * * * is awake to the fact that nothing will save us in these days except the most compact unity."

Concerning the Roosevelt-Churchill meeting:

"In the midst of those shadows which now surround us, the noble principles expressed by the Governments of the United States and England are the principles of those conditions of equity, harmony, and civilized life that all sincere men desire for the future. * * * All these points * * * represent the will of America united now more than ever, before the threat of evil and destruction, in the democratic ideals of mutual respect between nations and equality among the peoples of the entire world."

* * * * *

"Mexico is on guard for any act which * * * tries to make Mexican soil a field for activities hostile to continental solidarity."

"The world is involved in shadows but * * * liberty is invincible and the dream of Morelos who foresaw a free America will endure throughout all evil designs for enslaving the world."

* * * * *

"I believe that all the governments of the continent should be on guard. We must watch against those maneuvers of invisible warfare now so well known and against that propaganda * * * whose object is to undermine the unity of nations and block the American solidarity of our continent."

* * * * *

"The cause of our continent against mechanized dictatorship and the motives we should preach among our people and we should plant in their hearts is * * * that the flag of democracy and of continental solidarity shall not serve as a cover to deceivers or imposition; that liberty shall be the basis of our life; that governments shall be the true expression of their peoples; that neither from within or from without, iniquity * * * shall crush the heart of mankind of America. * * * The students and teachers * * * are the crusaders of a great cause of a free America, united and indivisible."

By actions suitable to these words the Mexican Government has not hesitated for a moment to do any and everything necessary to carry out the declaration of its President and Minister of Foreign Affairs.

The views expressed by the Government are shared by the majority of the rank and file of the people and the Mexican press which are squarely alined with the cause of the democracies.

Let us now turn to the declarations and statements of those other great statesmen in our sister republics farther to the south when they touch upon the question of inter-American solidarity.

In his report for 1941 to the National Congress of Colombia, His Excellency Dr. Eduardo Santos, referring to the totalitarian systems set up in Europe and the doctrines of liberty and democracy prevailing in the Americas, said:

"In the presence of these two camps the Government of the United States formally invites the peoples of the Continent to keep firm, unanimous, and compact in the camp of democracy and liberty. And it itself prepares to fight without reserve and to the extreme limits in defense of the principles which it rightly considers as the supreme safeguard of the moral treasurers of humanity."

* * * * *

"The Government of Colombia considers that 'the policy of American solidarity' proclaimed at the conferences of Buenos Aires, Lima, Panama, and Habana is much more than mere words; it should constitute a precious course of action and thought, a definite orientation in our international life."

His Excellency, President Elie Lescot, of Haiti, in his inaugural address on May 15, 1941, stated:

"During the tragic hours through which all humanity is now living, it is impossible for any nation to play a hesitant role. The whole world must know that the Republic of Haiti intends to maintain a perfect union with the 20 sister republics of this continent."

On August 22, 1941, His Excellency, the President of Panamá, declared with reference to the eight points set forth by President Roosevelt after his conference with Churchill:

"I am sure that the eight points arrived at by President Roosevelt and the Prime Minister of Great Britain, Winston Churchill, will radiate very wholesome influences all over America, for the prestige of republican and democratic principles and the good neighbor policy.

"I am particularly pleased that President Roosevelt should have extolled once again, in such an exalted and perfectly unequivocal manner, the sacred principles of territorial liberty and the political independence of all nations.

"In a very special manner the statement of the two governments pleases me, with the recognition of the sovereign rights of small countries and the right which each country has of adopting that form of government most appropriate to its idiosyncrasies, its needs, and the wishes of its own people, and with the principle of not accepting any territorial change which has not been freely consented to by the countries themselves and ratified by the constitutional powers in force."

Following a Cabinet meeting held on January 15, 1941, His Excellency, President Fulgencio Batista, of Cuba, and his Cabinet issued a joint statement, as follows:

"The Cabinet discussed Cuba's position in the international field and in the face of the world conflict. The President and the Cabinet ratified in their entirety the declarations recently made by the Prime Minister; they asserted again that Cuba would defend its principles and the democratic sentiments which are the basis of our nationality; and they also declared that we find ourselves at the side of our ally, the United States of America, to whom Cuba will always lend, to the extent that circumstances make necessary, all possible cooperation for the preservation of democracy, of liberty, and of the existence of the civilized world."

In an address before the members of the Venezuelan Congress and the visiting United States Subcommittee on Appropriations, the President of the Venezuelan Senate, Dr. Alejandro Rivas Vásquez, said:

"We understand perfectly the situation and outlook of the whole world at the present moment. We cannot and will not be misled by phrases and gestures. We wish facts and ask for facts. First: Independence, liberty, recognition of our own sovereignty; and, second, we are ready to give life, homes, wealth, and everything to preserve these sacred things and to contribute efficiently and proportionally to our size and means in the defense of the continent.

"We are ready here to join hands with our good neighbors and loyal friends at all times: The American citizens, in the defense of the Continent and to procure peace for all good nations in such a way as was dreamed by the master of American idealism—this American in the manner of a continental sentiment and view—President Woodrow Wilson."

His Excellency President Manuel Prado, of Peru, did not hesitate to declare himself, when, on April 1, 1941, and again on May 2, 1941, he said as follows:

"* * * (Peru) expresses once more its adherence to the cause of the States which fight resolutely to maintain, together with their independence, the integrity of the principles of democracy.

"In effecting this act of national affirmation in the exercise of our sovereignty directed to the progress and well-being of new generations, I comply with the unavoidable duty, responding to the dictates of my conscience as a citizen and as an official forged in the perennial truths which proclaim the spiritual liberty of man, of declaring that I share fully in the doctrine and policy of action which the President of the United States incarnates and which translate the profound hope of peoples to maintain their institutions, their honor, and their lives."

* * * * *

"Thus it is that America offers in this greatest period of history the fine spectacle of the renewal of its democratic faith and of its unbreakable decision to maintain its action of solidarity in the services of the principles which will shape the epic of their emancipation and which have characterized them in the universal concert as the home of liberty and of law."

His Excellency President Baldomir, of Uruguay, in a press interview given to La

Nación of Buenos Aires, on May 18, 1941, said in reply to a specific question as to what Uruguay's attitude would be in the case that war would reach the American Continent and that the sovereignty of the American states should be violated, said:

"In reply to this question I must state that Uruguay is disposed to carry out in every way and at any time, to the limit of its possibilities, and in the role which circumstances may assign, the pledges which it contracted in signing the agreements reached at the conferences of Panama and Habana; agreements which preestablish the joint and defensive action of all American countries against foreign aggression, thanks to diplomatic and armed cooperation and the practical mutual assistance of the several members of the continental community."

His Excellency, President Ubico of Guatemala, in the early part of March of this year, stated as follows to a correspondent of one of the great Argentine newspapers:

"Guatemala cooperates in continental defense in conformity with the principles of Panama and Habana, which are corollary to the solidarity, always more effective, between the Hispano-American nations and the United States, with which Guatemala has cultivated a warm friendship, particularly since 1871.

"My government has promulgated laws which proscribe ideological influences contrary to the democratic spirit of the institutions of the country."

His Excellency President Carias, of Honduras, on the occasion of the celebration of the Fourth of July in Tagucigalpa, stated:

"At this solemn hour, when we feel near to us the patriotic vigor of George Washington and Simon Bolivar, we must affirm our faith and our hope in the final triumph of democracy. The gallant effort of Great Britain cannot be futile. We have placed our confidence in your great country and its distinguished Executive, a leader of just causes, for his noble policy of the good neighbor."

In an address to the National Congress of Ecuador delivered on August 10, 1941, His Excellency President Arroyo del Rio stated:

"Ecuador will not display an apathetic front towards the defense of the continent, and it will cooperate in this defense to the extent that may be necessary for it to do so, because Ecuador, which has always felt deep appreciation for the necessity of American solidarity, could not betray the demands of its people. The Government hopes that the legislature will vest it with the broadest powers in connection with the work of the defense of democracy."

The Government of El Salvador on August 14, 1941, published an official statement of which the following is an excerpt:

"For these reasons the Government of El Salvador declares before the world its faith and devotion to democratic regimes, which it sustains and is disposed to defend with all the strength of which the Salvadoran soul is capable, all antidemocratic doctrines; formulates its unshakable intention of collaborating with the Americas, using all its spiritual and material resources to annihilate such doctrines, and expresses its vehement desire for the prompt return to the world of the reign of law and justice based upon democracy, the only form of government which satisfies the conscience of men of good will."

His Excellency President Getulio Vargas, of the United States of Brazil, in a speech made on the anniversary of Brazilian independence on September 7, 1940, said:

"Within the American Continent we enjoy an atmosphere of confidence and continue to practice the same century-old policy of friendly cooperation, offering, with absolute loyalty, our efforts for the prompt solution of all continental problems. The participation in today's civic festivities of special delegations from our neighboring countries, apart from affording us deep and sincere satisfaction, testifies in an eloquent manner to the spirit of fraternization and to the identity of sentiments which inspire our relations and transform into concrete action the generous ideal of American unity.

We all feel that, if necessary, the American peoples will, as they have done in the past during their struggle for emancipation, unite their soldiers and their arms in the defense of their own sovereignty and of continental integrity.

Again on September 7, 1941, Dr. Vargas, in a speech broadcast on the occasion of Brazilian Independence Day, said:

"The American nations form a 'defensive alliance which is prepared to resist aggression from any side.'

"Brazil," added the President, "is a pacific nation. Our greatest desire is to remain outside the terrible contingencies of the war, but we cannot predict the future nor what may be asked of us in this violent reform of the civilized world."

In an address made on June 4, 1941, the Foreign Minister of Brazil, Dr. Oswaldo Aranha, said:

"This pleasure, however, which is a family asset since it springs from our solidarity and neighborliness, must be preserved and defended in these times of such grave threats to human destiny. America, as we have always affirmed, has never been a source of quarrels and war, but the perennial inspiration for peace.

"Pan-Americanism is not an end, but a political community, a means for achieving wider objectives which are universal. A prosperous, peaceful, and happy humanity is the supreme aspiration of our peoples. America has helped to further the solution of the problems of the East and West because it does and always will represent in the world a happy medium between the two extremes."

His Excellency, President Somoza, of Nicaragua, on July 4, 1941, said:

"Sensible thinkers and statesmen of this continent, men who love peace and the principles of justice and order which we devotedly proclaim in the name of the heroes of our glorious independence; all peoples who feel the strangulation of force against right, and the noble spirits who suffer the weight of violence against human dignity; all of those who speak with the heart from the devastated shores of the Old World, turn their eyes toward America and all that great portion of scorned humanity realize that for us there will be no tragic hour of new slavery because we have learned much during our life as free peoples, and, having democracy as the support of our organization and defense, forming one block of aspirations, purpose, and hopes, we are ready to fight for our liberty."

On the occasion of the opening of the Bolivian Congress on August 6, 1941, his excellency, President Peñarenda, stated:

"It would be a mistake to think that political and economic repercussions of the European conflict will not reach or affect us. The nations of the world are so close to one another—regardless of the geographical distance which may separate them—and there exists such an interdependence among them, that no one country can consider itself aloof from the problems of others. We have seen in a bloody catastrophe, such as that now going on in the Old World, that nothing is held back. Anything is possible in the times in which we are living. We have seen centuries-old nations disappear within the course of a few weeks. We have seen principles disregarded which, until today, have been considered changeless. Humanity is living through a dramatic moment perhaps unique in all history. Everything seems to change; men and institutions, ideas and principles."

On July 7, 1941, His Excellency, Dr. Castillo, Acting President of the Argentine Republic, in a speech delivered in honor of the visiting chiefs of staff of the other American Republics, stated:

"In fulfilling the obligations which cannot be denied to any sovereign nation, Argentina's traditional policy of peace and harmony with all nations of the world has suffered no change; although the clash of extracontinental powers has upset our economy and modified our balance of trade, we believe the correct course is to keep alive collaboration with the American nations in order that the atmosphere of harmony will prevail here, where peace and order make nations great and nations respected."

His Excellency Ruiz Guiñazú, Minister of Foreign Affairs of the Argentine Republic, stated on June 4, 1941:

"If I were to be permitted to anticipate briefly my impressions of this journey I should say without hesitation that I have become conscious of the existence of a renewed pan-American conscience, of a real unity of aspirations and sentiments, made public in the conferences of Panama and Havana, which has become more uniform and strengthened in giving greater value to the continent without in this manner reducing the personality of the powers which constitute it.

"Because the present pan-Americanism has deepened, the reason of its finality in public international law, more than in private international law, obeys a more realistic and positive judgment.

"There is in all this a stimulating objectivity. It is reality itself which speaks and decides in greater measure, determined by the strong comment of communities and peoples above personalities.

* * * * *

"In proclaiming our unbreakable faith in law and justice, we have definitively formed our political and juridical conscience.

"From another point of view the world already knows that there is no reason for suspicions or secrets in the diplomatic obligations of the American chancellories, and that when they propose to organize peace they exclude neither the defense against dissolving tendencies toward our republican and democratic institutions, nor the reciprocal aid which they should lend each other to maintain their own existence."

Excerpt from a speech made by His Excellency, Dr. Manuel de Jesus Ironcoso de la Concha, President of the Dominican Republic, on November 16, 1940:

"E pluribus unum should also and always be the motto of the Americas, to synthesize their spiritual union, cementing it in their identical love for their own sovereignty and independence and that of others, in the uplifting degree of this sentiment and of their democratic institutions by every means, and in the strengthening of their relations with all races, as a way of working together for the happiness of all and that of each one of the nations which compose the domain of the Western Hemisphere."

In an interview published in La Tribuna of San José, Costa Rica, on August 22, 1941, His Excellency, President Calderon Garcia, said:

"I have not had the opportunity to refer to the eight points of President Roosevelt due to the state of my health during the last few days. I believe I am expressing the feelings of the people of Costa Rica, as well as my own when I state that my Government is in complete accord with these points, in view of the European war and the threats against the world. America must remain compact, and share the same ideals; she must be jealous of her liberty and her independence. While it is true that many of the republics which make up this continent are small—diminutive, in fact—it is also true that solidarity makes us great and invincible. These countries are thoroughly conscious of the significance of democracy and liberty. They have lived under these ideals the greater part of their existence, and even though some

Governors have attempted against these sacred rights of the countries, and on other occasions foreign interventions have occurred, we can safely say, without any doubts, that such happenings are a thing of the past, and that little by little we have conquered the greatest ideals of freedom. President Roosevelt, through his policy of good neighbor and cooperation among the countries of America, has built the foundation of a new America that cannot distrust its brothers, but has complete confidence in the disappearance of political or racial differences that at other times have marred our history. Evolution has been slow, but it is now a fact."

In an address on September 2, 1941, His Excellency, the Minister for Foreign Affairs of Chile said:

"American solidarity is a combination of the moral, economic, and physical forces of these countries to conserve intact together with their own sovereignty the beneficial democratic norms which rule us. The solidarity only contemplates the employment of force for the common defense in case of extra-continental aggression. Chile is disposed to participate in the defense with serene and irrevocable decision."

In April last, His Excellency, the President of Paraguay, said:

"Continental solidarity is a doctrine which merits the most frank adherence of the Paraguayan Government."

His Excellency, the Minister of Foreign Affairs of Paraguay, stated:

"We proclaim solidarity, cooperation, and mutual assistance as substantial norms of American international life together."

You have heard what our friends to the south have to say on the question of continental solidarity. Let us now turn to what the President, the Secretary of State, and the Under Secretary of State have to say:

The President in a speech on May 27, 1941, stated:

"Now, as never before, the unity of the American republics is of supreme importance to each and every one of us and to the cause of freedom throughout the world. Our future independence is bound up with the future and independence of all our sister republics. * * * We reassert the solidarity of the 21 American republics and the Dominion of Canada in the preservation of the independence of the hemisphere. We have pledged material support to the other democracies of the world and we will fulfill that pledge. We in the Americas will decide for ourselves whether and when, and where, our American interests are attacked or our security threatened."

In an address made on May 16, 1941, the Secretary of State said:

"The American nations, beyond all others, have learned to live together, to work together, to join in solving common problems. We have achieved a unity in which no nation is afraid, and no nation's voice is unheard. The strength of any one of us is at the disposition of all; the problems of any one of us are the concern of all * * * as nations and as individuals, Americans have been vouchsafed the highest honor and responsibility ever granted to a group of peoples." * * *

In an address delivered on September 28, 1940, the Under Secretary of State, Mr. Sumner Welles, said:

"Today the governments of all the American republics are cooperating as one in the search for remedies for their common problems, and with a full and reciprocal recognition of their several needs and requirements. They are as one in their determination to preserve their domestic institutions, their ancient liberties, and their independence and integrity; but, more than that, they recognize today that the strength of every one of them is vastly enhanced by the combined strength of the rest. Speaking from the standpoint of a citizen of the United States, I can conceive of no greater safeguard to the national defense of the United States than the realization on our part that we possess the sympathy, the trust, and the cooperation of our neighbors of the New World."

And so it is that we find the free peoples of America banded together in one mighty purpose—the defense of freedom, tolerance, equality, opportunity, justice—not only for society as a whole but also for each particular individual. They are things for which our fathers contended, for which we have sacrificed, and for which, now, we are ready to defend. God willing, our common faith and our common tradition and our common unity will bring about a lasting triumph for the freedom we cherish and will never surrender.

My personal and political creed—and I commend it to you in this hour, when all Americans should stand shoulder to shoulder—was first enunciated by that great American sailor, Stephen Decatur, in a toast given at Norfolk, Va., April 17, 1816:

"Our country. In her intercourse with foreign nations may she always be in the right, but our country right or wrong."

It may be objected by some that no man should acquiesce in wrong under any circumstances. That was not the admonition of Decatur. He had supreme faith that his countrymen would reach the right conclusion and pursue the right course. He believed all citizens should accept the decision reached in legal and constitutional ways and give wholehearted support to the will of the land. His admonition was that no man should act on his own and in opposition to the lawfully declared policy of his country.

And what Decatur was ready to do all Americans of every decade should emulate as the high duty of every man who loves his country and wishes to preserve its free institutions.

Attitude of Axis Powers Toward United States

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ARTICLE BY JOHN T. WHITAKER

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Mr. John T. Whitaker, published in the Philadelphia Evening Bulletin of September 18, 1941, under the heading "Cynical Contempt Shown by Axis Toward United States."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Evening Bulletin of September 18, 1941]

CYNICAL CONTEMPT SHOWN BY AXIS TOWARD UNITED STATES—"FRANCE WILL LOOK HEROIC BY COMPARISON WITH YOU," HIGH-PLACED FASCIST DECLARED, OUTLINING PLAN FOR NEW WORLD CONQUEST

(By John T. Whitaker)

The historical and only meeting between Roosevelt and Churchill did not take place until this August—almost 2 years after the commencement of hostilities.

Hitler and Mussolini met to discuss exactly the same problem last winter and they met not once but many times. The problem discussed by the democratic and by the Axis leaders alike was America's role in the war. It has long been plain to statesmen of their stature, as it ought to be to the man in the street, that the decision lies between Germany and America—that one or the other must win this war.

Early last fall, before the American Presidential election, German and Italian propaganda thumped for Willkie. Goebbels' poisoned pens described Roosevelt as a "deformed Jewish hireling of the armaments companies and the banks" who wanted to bring America into the war so that he could become dictator. If Roosevelt were elected, they said, American boys would be transported to the battlefields of Europe. And it was a great shame, said Axis propaganda, because Hitler secretly loved America and invasion was a fantastic dream. This propaganda was a tissue of lies based upon the near certainty, as "fifth columnists" reported, of Roosevelt's reelection and upon preparations already being made by Hitler and Mussolini for war against America.

INTERVIEW WITH CIANO

In this period I had one of many interviews with Count Galeazzo Ciano, Mussolini's son-in-law and foreign minister. I thought what he said interesting.

"I am absolutely certain of Roosevelt's election," he said. "So are the Germans."

"Why then does Axis propaganda attack Roosevelt and describe Willkie with enthusiasm?" I demanded.

"For exactly that reason," replied Ciano. "Because we know that Roosevelt will win the election. But don't think we don't understand Willkie. Willkie is a Republican and the Republicans are your traditional war party, the real imperialists of America.

"Willkie will take you to war as soon as Roosevelt. The man doesn't matter. Your interests involve you in this war. Either the totalitarian powers or the democracies must prevail."

That is the way the Axis leaders were thinking last fall. They knew that the ultimate and decisive show-down had to come between Germany and America—the greatest of the democracies. Their propaganda was designed to persuade the American public that it was not necessary or to the interest of America to go to war, that war was something Roosevelt personally wanted for personal reasons.

This was doubly cynical since one of the most important of the German diplomats told me that Mrs. Roosevelt was a profound pacifist, that she had a great influence on the President and that Hitler felt convinced that Roosevelt would never lead the United States into war before America was attacked.

WHAT DICTATORS DISCUSSED

The greatest secrecy surrounded Hitler's various talks with Mussolini through the winter. And yet within a few days or weeks of each of them important Germans and Italians knew most of what happened or the substance of the conversations always leaked out. One of the things the two dictators discussed—though certainly not in such disrespectful language—can be illustrated by an apocryphal anecdote first circulated by an Italian diplomat.

"Why can't you take Malta?" Hitler is supposed to have asked Mussolini.

"Malta is an island, too," Mussolini replied, according to this wit.

Facing the threat of an awakening America, which was talking at last about producing armaments in mass, Hitler and Mussolini found that England wouldn't collapse. When France collapsed both expected Britain to capitulate. When Britain would not capitulate both undertook terroristic mass bombing.

If Churchill were a stubborn warmonger—the only man who stood between Hitler and peace—the British people would be bombed into submission. Hitler and Mussolini cared nothing for American reaction to the mass bombing of civilians because they knew they had to defeat America to win in any event. Their problem was to knock out Britain before America could enter the war.

Had they bombed military objectives they might have starved Britain out, but they bombed civilians and that only raised British morale to the most stubborn heights ever reached by a desperate people fighting with its back to the wall and alone.

AMERICA PRINCIPAL FOE

Meeting in midwinter, Hitler told Mussolini frankly that they were in for a long war and that America was to be their principal foe. He outlined a joint plan. The Axis had to clear the Mediterranean, take the Balkans and the Middle East with Suez. Then Germany would conquer Africa and establish U-boat and bomber bases along the whole littoral of the South Atlantic.

Just as the combination of submersibles and planes was destroying commerce in the North Atlantic, so it would close the South Atlantic. Britain and America together could never replace the shipping lost. The French Fleet in cooperation with the Italian Fleet and new German units such as the *Bismarck* would drive commerce from the seas. America would be terrified and to insure her isolation Hitler had arranged that some time later Japan would join a tripartite alliance under which she would come to war if America intervened for Britain.

A long deadlock was plain to see and in subsequent weeks the British won Cyrenaica and pounded the Italian Fleet at Taranto while the Greeks, picked as a pushover, proved a monkey wrench in the timetable. Italian morale was collapsing and I went again to see Count Ciano, hinting that the moment had come for the Italians to make separate peace unless they were willing to see the Germans march in and turn them into a conquered province.

THE VALUE OF TIME

"Your Excellency knows as well as I that time is on the side of the democracies," I said.

Ciano, very serious, replied quietly.

"Yes, time is on the side of the democracies," he said, "provided—provided there is time enough."

Nothing has so succinctly summed up the grand strategy of Hitler and Mussolini in face of America. They must thank the American isolationists, no less than their own "fifth column," that American failed to act in the spring and is failing to act now.

The Axis leaders have retrieved their position in the Mediterranean and they are now conquering Russian raw materials and wiping out the armed forces on their most vulnerable flank. This is being done with no interference from America. American production and American morale will never be a threat to the Axis, in the opinion of every Axis spokesman with whom I have talked, until America has declared war.

Until America is on a war footing with a war psychosis the Axis leaders feel that they can keep the initiative. Then they will hit America before the country realizes that for a full year it has been denominated by Hitler as enemy No. 1.

"South America will go against you, your own public will be paralyzed and we will have every country in the world standing with us. Our long-range bombers will wipe out your industrial cities and we will land 25,000 men at a time in your key centers—land them by transport aircraft.

CONTEMPT FOR UNITED STATES

"France will look heroic by comparison with America—your fleet spread in two seas, your air force crippled by 'fifth columnists,' your money-mad citizens scrambling to climb onto what you call the band wagon."

These were the farewell remarks of an important Fascist leader to me as I was expelled from Italy.

"We know America," he said. "Our 'fifth column' is busy. You won't go to war this spring and you won't go to war this fall. Your people aren't the kind to make sacrifices. They won't ration food and clothing and gasoline. They won't live in training camps. They won't go abroad to die for the liberty you talk about so glibly."

This important Fascist added a personal warning.

"Whitaker, you are a fool," he said. "You could have chosen for us if you hadn't believed so profoundly in what you call democracy. You'll spend your latter days in a concentration camp in Axis-ruled America. I'll come to see you then."

"Don't bother," I told him. "I'll come to see you in Rome—I'll come in the uniform of the American Army."

It was 5 years ago that Mussolini said, "We or they." He meant it, and Hitler means it, too.

The Poles in America

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ARTICLE BY PROF. ROMAN DYBOSKI, OF CRACOW UNIVERSITY

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Roman Dyboski, Ph. D., professor, of the University of Cracow, on the subject The Poles in America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Polish Review, New York, N. Y., of September 8, 1941]

THE POLES IN AMERICA

(By Roman Dyboski, Ph. D., professor of the University of Cracow)

The immigrant elements from Continental Europe that went to the making of the modern population of the United States, may be divided into two categories: an earlier one, driven from Europe by political persecution and representative of its intellectual elite, played an active part in building up nineteenth-century American civilization; and a later category, mostly agricultural labor, that left Europe under the stress of dire poverty, to build railroads and provide unskilled labor to the mining and factory cities of America, making no other contribution to her creative achievements than sheer hard physical work.

The four and a half million Poles who live in compact masses in the working-class quarters of America's great industrial centers, are generally included wholesale in this second category.

Until recently, it was not realized by American opinion—nor even by the rank and file of the Polish-American element itself, that Poles figured prominently in the earlier immigration of chosen, liberty-loving spirits from among Europe's soldiers, politicians, intellectuals, and artists, that Poland was not behind other nations in contributing its quota of creative effort to the fabric of modern America. It is to recent and painstaking research by a Polish-American scholar, M. Haiman, in Chicago, that we are indebted for a better knowledge of the part played by individual Poles in the political development and intellectual progress of the United States; and it is on his studies that we mainly rely for this brief survey of a little-known subject.

POLES CAME IN 1608

Going back to the very beginnings of America's colonial history, we find that even the Pilgrim fathers had their Polish predecessors on American soil in the shape of certain Polish artisans introduced by the English into Jamestown in 1608 and praised by Capt. John Smith, the colonizer of Virginia, for their industry and their skill, especially in making pitch and tar for shipbuilding uses, as well as for their bravery in fighting the Indians. These Polonians were awarded the franchise of the colony by the Virginia Co. of London in 1619, having organized a regular strike for the express purpose of obtaining political rights.

In the same early period Polish farmers made their mark among Dutch settlers in what is now the State of New York, and the first secondary school founded in New Amsterdam (as New York was then called) was organized in 1659 by a Pole, Dr. Alexander Charles Curtius.

It was in the Dutch colony of Amsterdam also that another Polish settler, Albert Zaborowski, acquired wealth and authority in the middle of the seventeenth century, becoming the owner of large tracts of land on the Passaic River in northern New Jersey, and gaining fame as a friend and protector of the Indians of the region. He founded a widespread family, honorably known in many parts of the United States by its shortened name, "Zabriskie."

Poles were not merely among the established settlements, they also adventurously explored the remote and uninhabited wilderness. In 1735 a Pole, John Anthony Sadowski, reached the western outskirts of Ohio, anticipating systematic white colonization there by a hundred years. The town of Sandusky, Ohio, commemorates his name. He himself afterward lived in Virginia, where he was killed by the Indians. His sons, Jacob and Joseph, became companions of the famous Kentucky pioneer, Daniel Boone. They assisted in the first survey of Kentucky, were the first white men to camp on the spot now occupied by the town of Cincinnati, Ohio, and founded the town of Harrodsburgh. One of them actually reached New Orleans, going down the Mississippi in a boat built by himself. At the same time the first map of the coast of New England, a map still admired for its accuracy, was produced by a Polish surveyor in the British service named Charles Blaszkowicz.

These and other pioneering achievements of Poles in the seventeenth century were the outcome of the interest the Polish people had long taken in the New World. Poland, in her old University Library at Cracow, houses the earliest globe of European make, on which America noviter reperta figures as a separate continent (a replica now adorns the Polish room in the University of Pittsburgh). Plans for founding a Polish colony in the southern part of North America—to be called New Poland—were entertained by an eighteenth-century Polish statesman, T. Mostowski; but the first partition of Poland prevented the enterprise from maturing.

HEROES OF TWO WORLDS

A Polish name, far greater than those hitherto mentioned, illumines both America's War of Independence and Poland's last stand against her despoilers. Not in vain is Gen.

Thaddeus Kosciuszko (1746–1817) known to fame as the hero of two worlds—the Old and the New.

It was as a young captain of the Polish Army, commissioned after graduation from Polish and French military schools, that Kosciuszko decided, in 1776, to carry his sword across the Atlantic and help the American Colonies in their struggle for freedom, which was finding a sympathetic echo throughout Europe. His services to the cause of American independence are well known and have frequently been commemorated in oratory, literature, and art.

Kosciuszko's name has never ceased to be honored in America as well as in Poland; in the United States it is commemorated not only by monuments in all the chief cities but by several towns named after Kosciuszko. His name was also given to an island off the coast of Alaska, discovered several decades ago and recently explored by the Polish geographer, S. Jarosz.

Side by side with Kosciuszko, both nations honor the memory of Casimir Pulaski (1748–79), who gave his life for America's independence. Unlike Kosciuszko, he had his career as a leader of the Poles behind him and not before him when he came to America. For 3 years before the first partition of Poland, he had waged a dauntless guerrilla warfare against the Russian invaders. After 4 years of wanderings in exile, he offered his services to America through Benjamin Franklin in Paris, who sent him to Washington's headquarters. In the War of Independence, Pulaski won fame for the same intrepid courage in attack he had shown as a partisan leader in Poland. By his boldness he saved Washington's army at Brandywine and at Warren Tavern in 1777; and, at the head of a special detachment organized by himself—"Pulaski's legion"—he marched, in 1779, into South Carolina, raised the impending siege of the town of Charleston, and finally met a hero's death in leading French and American troops in the attack on Savannah, Ga.

Kosciusko and Pulaski were not the only Polish soldiers who distinguished themselves in America's War of Independence. Pulaski's Legion included many other Polish volunteers, some of whom share with him the glory of heroic death in battle, and one of whom, M. Rogowski, survived to write memoirs of the Revolutionary War. Other interesting memoirs on the early years of America's new life of freedom were written by two exiled Polish poets, the brilliant satirist, K. Wegierski (who visited America in 1784) and J. U. Niemcewicz, sometime aide de camp to Kosciusko and afterward a farmer in New Jersey with his American wife, Susanna Kean. In those early years of the United States' struggle for existence services no less valuable than those of Polish soldiers were rendered to America by the financial efforts of a rich Polish banker settled in Amsterdam, Holland, Peter Stadnicki, an early purchaser of United States bonds, who afterward for a time became chief banker for the United States in Europe, and, as one of the founders of The Holland Land Co., laid the foundation of agricultural settlement in the remoter parts of New York and Pennsylvania.

THOSE WHO FOUGHT FOR FREEDOM

The next important contribution by Poles to the national life and culture of the United States arose out of Poland's armed uprising against her Russian oppressor in 1830–31. The brave efforts and ultimate failure of the Polish insurrectionists elicited expressions of sympathy from all lovers of liberty among western nations; nor were American voices wanting in that general chorus. A Polish-American committee was organized in Paris by the joint efforts of James Fenimore Cooper, the eminent American writer, and Lafayette, America's French friend, who fought side by side with Kosciuszko for American independence. An American doctor and philanthropist, Samuel G. Howe, of Boston, who was to carry relief funds from the committee into Poland, suffered long imprisonment in Germany for his noble attempt; another American doctor, Paul F. Eve, of Georgia, actually served with distinction in the medical corps of the Polish Army during the insurrectionary campaign.

After the disastrous failure of the insurrection, thousands of its soldiers sought a new home abroad, in western Europe and in the United States. The American Congress granted them a whole township (6 square miles of land) in the State of Illinois, but the exiles were too poor to reach and develop it. They were scattered through the towns of New England States, and it was here that many of them, with later arrivals from Poland, made their mark in the development of the different American communities that gave them hospitable shelter. Among them were A. Kurek, the composer, who was the first organizer of touring orchestras in America; J. Fontana, another composer, who had been a friend of Chopin; H. Domochowski-Sanders, a sculptor, whose bust of Pulaski adorns the Capitol in Washington; A. Zengteller and A. Raszewski, engravers; J. Podbielski, a translator of Polish works into English; and an even better known translator, P. Sobolewski; the editor of a popular anthology entitled "Poets and Poetry of Poland" (1881); H. Kalusowski, a well-known doctor and philanthropist in Washington; K. Gzowski, founder of the city of Toronto in Canada and builder of the first bridge near Niagara Falls; L. Boeck, organizer of one of the first schools of engineering in America; Dr. F. Wierzbicki, known for a description of California, the first book printed in San Francisco (1849); A. Jakubowski, son of a distinguished Polish poet, himself a gifted writer of verse in Polish and English, whose early death was a great loss; finally, K. Kraitzir, a Hungarian by birth, but a volunteer soldier in the Polish insurrectionary war and author of The Poles in the United States (Philadelphia, 1937).

At the time when these exiles from Poland displayed their manifold intellectual and social activities, the territorial expansion of the United States toward the far West was in full progress and Poles were among its pioneers. Both in the conquest of Texas for the Union and in the Mexican War of 1846–48. Poles fought with distinction on the American side and some of them fell. One of the officers who had served against Mexico, K. Radziminski, also took an active part in the delimitation of the new frontiers. Another Pole, Truskolaski, did meritorious service as a surveyor of newly occupied territories both in Louisiana and in Utah.

In consequence of the individual achievements and services of Polish insurrectionary soldiers of 1831 in America, the forties were a time when the Polish element was well known in the United States and frequently received demonstrative proofs of political sympathy from the American people.

WITH GRANT AND LEE

Having been drawn so deeply into the inner life of the United States, the Polish exiles could not remain aloof during the great crisis which culminated in the Civil War of 1861–65.

The number of Poles living in the United States at the time of the outbreak of the Civil War is estimated at some 30,000. The majority of them lived in the Northern States; accordingly, 4,000 out of the 5,000 Poles who fought in the War, served under the banner of the Union, and only about 1,000 in the ranks of the Confederate Army. On the side of the Union a Polish leader, Gen. W. Krzyzanowski, won high rank and preferment. Exiled from Prussian Poland by political persecution, he went to America, was a railway builder in the Middle West, and a merchant in Washington. He was one of the first to respond to President Lincoln's historic appeal for volunteers; he organized a militia company in Washington; entering it as a private soldier, he was soon promoted captain, then colonel of the Fifty-eighth New York Infantry Regiment, known as the Polish Legion. He fought with distinction at Cross Keys, at Bull Run, at Chancellorsville, at Gettysburg, and in the expedition to Tennessee, becoming the idol of his soldiers. Leaving the service with the rank of brigadier general, he afterward became the first Governor of Alaska, and later served meritoriously in Panama and in the State of New York.

Another exile from Prussian Poland, Joseph Karge, who had begun his new life in America as a school teacher, became the commander of a New Jersey cavalry regiment and fought all through the war with distinction. On his return to civil life he earned popularity as a professor of foreign language and literature at Princeton University, where he taught for nearly 30 years. The names of Krzyzanowski and Karge have their counterpart on the Confederate side in that of Gen. K. Tochman, who organized and for a time commanded the Polish Brigade of New Orleans. And in both Armies many Poles laid down their lives for the cause in which they fought and sustained their country's reputation for heroic valor; some Polish women also earned praise for self-sacrificing heroism as army nurses, particularly Sister Veronica Klimkiewicz, of the Sisterhood of Mercy, who rendered valuable services to the Union Army and lived on into honored old age, to die in 1930 at Baltimore.

UNSKILLED LABOR COMES

The sixties open up a new era in the history of European, and particularly of Polish, immigration into the United States. In places of the political exiles of former days, representing the intellectual elite of Europe and introducing valuable creative elements into many walks of American life, masses of unskilled made their appearance, coming largely from the rural districts of southeastern Europe, largely Latin and Slav, and soon to be absorbed by America's rapidly growing industries.

The large Polish-American community that grew up in that period, is rightly regarded as a mainstay of the Polish national cause. It earned this reputation by its willingness to make large sacrifices for its oppressed motherland. Another outstanding characteristic of the Polish community in the United States is its attachment to Catholic tradition—a dominant feature of Poland's national life throughout history. The Polish peasant farmer, like the Irishman, is fervently devoted to the faith of his fathers. Roman Catholic priests, the people's most trusted advisers at home, became its first leaders and organizers abroad, and Roman Catholic parishes are the first and remain the fundamental units of Polish national organization and instruction in America.

It was at the summons of an immigrant priest, Father L. Moczygeba, that a group of Polish peasant farmers from Upper Silesia went out to settle in Texas as early as 1854. They brought domestic furniture and farm implements with them; nor were the very bells of the local parish church forgotten, as well as a huge wooden crucifix, to be planted in the midst of the primeval wilderness of the far West. The journey across the American Continent, still made by covered wagons, took months. The beginnings of the first settlement, piously named Panna Maria (the Virgin Mary) were hard, indeed, and many of the settlers succumbed. Yet all difficulties were overcome by the iron endurance of the sturdy peasant nature and Panna Maria became the center of several thriving settlements, whose inhabitants, the sons and grandsons of the original immigrants, are well-to-do American

farmers today, but cling closely to their religion and national traditions.

The Upper Silesian settlement in Texas was the forerunner of many others of a similar kind. But the majority of Polish emigrant peasants soon began to people the large industrial cities of New England, Pennsylvania, and of the Middle West. In 40 years, from 50,000 in 1870, the number of Poles in the United States rose to 3,000,000 in 1910. The majority worked in factories and mines, and only some 10 percent remained tillers of the soil. But a new growth of prosperous Polish farms has recently developed in some parts of New England, especially in the Connecticut Valley, where once prosperous farms are passing from the hands of old colonial families into those of Polish owners, originally farm hands. And Polish artisans and tradesmen, with an increasing class of professional men, especially doctors, architects, and lawyers, are now fairly numerous in the large Polish districts of such cities as Chicago (which has three such districts with nearly half a million Polish inhabitants), Detroit (whose borough of Hamtramck is solidly Polish), Cleveland, Buffalo, Pittsburgh, and Baltimore. In the South and in the West the Polish element is much less strong, though it is not entirely absent from any part of the United States.

WORLD WAR NO. 1

As Poles fought bravely in the Civil War, they again distinguished themselves in the Spanish-American War of 1898. Several companies of the National Guard that are still in existence were then composed entirely of Polish volunteers.

When the World War came and America associated herself with the Allied Powers, Americans of Polish origin were foremost in offering their services to their country. Their contributions to Red Cross funds and to the Liberty loans were out of all proportions to their numbers and to the wealth they possessed. Likewise their response to the call for men. Out of the first 100,000 volunteers who answered the summons of President Wilson, no fewer than 40,000 were Poles, and it is on record that the first American soldier to die on the field of honor in France was a Pole. His name was Joseph J. Czajka, of Milwaukee, Wis. Altogether, some 300,000 Poles served in the United States Army in the last war.

Poland's hopes for political resurrection were bound up with the cause of the western allies. Paderewski, looked upon by millions of Americans as one of the world's great artists, gave a new voice to Polish aspirations. His popularity in the United States and his gift of oratory were invaluable in the service of his country.

Coming to America in 1915, he campaigned on behalf of Poland, addressing countless meetings with never-flagging fire and magnificent mastery of speech. It was due to his efforts that the restoration of Poland became part of President Wilson's 14 points. He succeeded, by his personal magnetism, in creating a united Polish National Committee in Chicago in 1916, which, besides many other services to the cause of Poland, collected more than $10,000,000 for Polish national aims from the Polish-American community. Paderewski, by his appeals to American Poles, caused some 25,000 men from the United States and Canada to join the ranks of the Polish Army in France, which fought on the Allied side under the command of General Haller in the last stages of the World War. The services of the Polish-American community to the new Poland did not end with the restoration of Poland. American Poles were among the most generous subscribers of the first loan of the new Polish Republic, and they gave unflagging assistance to their motherland in all critical situations in which she found herself in the difficult early years of her new existence, right down to the disastrous floods in southern Poland in the summer of 1934, which called forth a splendid outburst of Polish-American relief activity.

These manifestations of attachment to the "old country" as Americans of Polish origin generally call Poland, are cherished in Poland's national memory together with the historic proofs of active sympathy, which the new Poland has at various times received from the Government and people of the United States, such as the heroic volunteer services of the "Kosciuszko Squadron" of United States airmen in the Polish-Bolshevik War of 1920; the post-war relief campaigns of the Hoover Mission, the American Red Cross, the Society of Friends, and other agencies; the expert help of Professor Kemmerer and Mr. Charles S. Dewey as Poland's financial advisers and the large American loan of 1927; last but not least, the humanitarian and educational activities of the American Y. M. C. A. among Polish soldiers in wartime, continued among the civilian population in time of peace and culminating in 1923, in the creation, with generous material assistance from America, of a "Polish Y. M. C. A."

New Dealers Pull Another Paradox

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

ARTICLE FROM THE TOPEKA (KANS.) DAILY CAPITAL

Mr. REES of Kansas. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an interesting and informative article from the Topeka Daily Capital of Topeka, Kansas, under date of September 27, 1941. The article is by Clif Stratton, who represents the Capital's Washington Bureau. Mr. Stratton is an able writer and has given a great deal of study to farm problems. It reads as follows:

[From the Topeka (Kans.) Daily Capital of September 27, 1941]

NEW DEALERS PULL ANOTHER FARM PARADOX—FORCE CANADIAN WHEAT, ARGENTINE BEEF DOWN THROATS

There are some mysterious goings-on in official circles these days. There is Secretary Wickard of Agriculture planning to reduce wheat acreage even below the 55,000,000 acres minimum established by Congress for the A. A. A. program—down to 50,000,000 acres.

This because of the huge surplus of wheat. We can understand that. But at the same time, here comes Secretary of Treasury Morgenthau, and urges that the bars be let down and that large quantities of wheat be imported into the United States from Canada, which also has large surpluses.

Also, there are stories going around that Canadian wheat is being milled in bond in flour mills as far south as Texas, grinding flour to be exported. There is a 42-cents-a-bushel tariff on wheat for human consumption; wheat for feeding to animals gets off with 10 percent ad valorem, or around 10 cents a bushel. But wheat can be brought in to be milled for export purposes in United States mills, and pays no tariff at all. So if some of the mills buy Canadian wheat for export flour, when it is lower in price than United States wheat, that is understandable.

But the justice of charging United States growers 49 cents a bushel to feed wheat to animals on their own farms, while Canadian wheat can be brought in on a tariff of 10 cents a bushel (frequently less)—well, that is one of the mysteries. And this observer believes the A. A. A. program, with all its faults, is the best yet tried out for the American wheat growers.

And here is something else—it is worrying the dairy people, instead of the wheat growers. Paul McNutt, Administrator of Federal Security Agency (for some reason he has been given charge of administering the Oleomargarine Act), has rewritten the oleo regulations so that oleo can be made to look just like butter, and if vitamins are added practically can be sold as butter to unsuspecting customers. Oh, I know the regulations don't say that, but the practical effect is just about that.

And, in addition, in the name of nutrition, radio programs are being put on by McNutt's department, advertising the wonderful qualities of oleomargarine. Maybe it has all those qualities claimed for it, but our understanding is that you can make oleo look like butter, taste like butter—but still it isn't butter, any more than near-beer was beer, and it doesn't have the nutritive value of butter from the good old dairy cow.

Also, our Government, ever anxious to get a new order going, remake the world, and so forth, now seems to be doing a clever job for the Argentine cattlemen, and for those smart American packers who have packing plants in the Argentine.

As part of the Nation-wide nutritional program, Extension Service of the Department of Agriculture has slipped in promotion of "corned beef and cabbage" days or weeks or something like that. Women taking home courses in home cooking from experts from the agricultural colleges are being urged to feed the men corned beef and cabbage.

Now the joker in that program, so far as the American farmer who handles beef cattle, is that the only tinned corned beef that can be bought in the United States is made from Argentine beef. So through this "corned beef and cabbage" course in nutrition, American housewives all over the country are being educated to buy Argentine beef.

Unless the foot and mouth disease quarantine is removed, cattle and fresh beef cannot be imported into the United States from Argentina—but canned beef can, and is.

At the same time, and for some time back, Secretary of State Cordell Hull has been and is working to lift the quarantine against Argentine fresh beef. The Eastern seaboard cities want it—it is cheaper than American-produced beef. Now if the housewives of the rest of the country can just be educated to use more and more Argentine beef in cans, it ought to make it easier somewhere down the road to get Nation-wide public sentiment in favor of Argentine fresh beef as well.

In our spare moments we wonder just how popular the "corned beef and cabbage"—Argentine tinned beef preferred—nutrition campaign is, say in the Kansas Flint Hills region.

This administration is strong for helping the farmer—and it has done a lot. But why, we pause to inquire, does it also insist on taking away more and more of the market from the American farmer? R. S. V. P.

Farm Credit

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

PAMPHLET PUBLISHED BY THE FEDERATION OF NATIONAL FARM LOAN ASSOCIATIONS

Mr. JENSEN. Mr. Speaker, a very enlightening pamphlet has just recently been published by the Federation of National Farm Loan Associations, entitled "Is the Farm Credit System Being Sold Down the River?"

I ask unanimous consent to extend this analysis of the new proposed Farm Credit Act, H. R. 5336, in the Appendix of the RECORD. Hearings are now being held on this bill by the House Committee on Agriculture.

The article follows:

[Analysis of the new proposed Farm Credit Act (H. R. 5336) with suggested remedies by the Federation of National Farm Loan Associations, conference held at Chicago, September 19, 1941]

IS THE FARM CREDIT SYSTEM BEING SOLD "DOWN THE RIVER"?

The Federal Land Bank System is in danger of being traded for a Government lending agency if House bill H. R. 5336 is passed in its present form, despite the many good features of the bill.

The farm credit system has grown for 25 years and has lived successfully through one war inflation, two depressions, and five changes of administration without serious criticism. Farmers have over $215,000,000 invested and should have a majority of control.

The danger of a federally controlled lending agency is that political prestige may replace sound farm values as a basis for the extension of credit, and political pressure might determine the collection policies. Thus we might ultimately lose the institution that has saved thousands of farmers in the past 25 years.

On March 25, 1941, we sent out to all farm-loan associations suggested remedies for the farm credit system. A bill has been drawn up by the Farm Credit Administration after consulting with the grange, the Farm Bureau, and the council of cooperatives, and has been introduced in Congress by Representative FULMER. It is known as H. R. 5336.

The Farm Credit Administration and the farm organizations did not agree on a number of amendments which the farm organizations believe are essential to the safety of the system, so the farm organizations will present these amendments to the committee when hearings are held.

While the bill has many good points, in its present form the bad points far outweigh the good. We do not want to spoil the good features of this bill, but prefer to correct the situation by eliminating the bad features, and unless they are eliminated by amendment we feel that the bill should be defeated.

Every farm-loan association and every borrower should study this bill and get in touch with his Congressman and Senator, requesting the elimination of the objectionable features and the addition of proper safeguards.

The greatest danger in the bill lies in the increase in centralized control. Practically every action of an association or a bank is made subject to the approval of the Governor of the Farm Credit Administration. There are three sections relating to scaling debts, in which the Governor would almost supplant the banks; in addition there are about 65 places where the activities of the banks and the associations are made subject to the approval of the Governor.

There has already been too much control in Washington. The function of the Farm Credit Administration should be to see that the law was enforced, while the boards of directors of the associations and the banks should be responsible for the operation of their own institutions.

There are a number of places where increased power is sought which can be corrected by amendment. Space prevents listing them all, but the following amendments are thought necessary to prevent complete control and operation from Washington:

A. LIMITING POWERS OF GOVERNOR OF FARM CREDIT ADMINISTRATION

1. Remove the power of the Governor to veto salaries of individual employees and confine his approval to salary schedules, thus placing the responsibility for hiring and firing on the boards of directors where it belongs.

2. Provide for a Farm Credit Board of nine members, three appointed by the Governor, and six elected by the borrowers, two each by the National Farm-Loan Associations, the Production Credit Associations, and the Cooperatives which are borrowers from the Cooperative Bank.

3. Provide for an advisory committee chosen at conferences, made up of representatives of farm-loan associations, which, among other duties, could make nominations for directors and, further, furnish a closer contact between the land banks and the associations.

4. The bill dangerously provides for the adjustment of the debts of its farmer borrowers. It provides that any farmer, who believes his farm is worth less than his mortgage indebtedness against it, any time may apply for a scale down.

This would result in putting a premium on delinquencies, and would encourage the dishonest farmer to avoid payment of his debts, the loss being absorbed by the associations and the Federal land banks of the system, with the result that the honest, hard-working farmer would be paying the indebtedness of the drones of agriculture.

In regions where disaster has overtaken farmers, provisions for direct help from emergency agencies, or from the present revolving fund, should take care of those cases; and money should be paid into the revolving fund by the Government to cover these losses, as in many cases they were incurred at Government demand.

The entire debt-adjustment provisions of the bill should be eliminated, as these provisions of this bill are not sound and should not be a part of any sound credit system. The measure should be amended by striking out sections 10, 11, and 12 of H. R. 5336. A more helpful policy would be to amend the measure to provide that losses arising from emergency lending and collection policies ordered by the Government should be met from the Government paid-in surplus.

5. We believe the Governor should not be allowed to determine how much income each association is to have, if any.

6. We do not believe the Governor should be allowed to determine the extent of farmer participation in the Federal Land Bank System.

7. The bill takes authority for determining the issuance of bonds out of the hands of the banks and gives the control to the Governor. No Governor should have this power over a board. It covers the very source of funds on which the system operates.

8. Change the functions of the Governor to a law-enforcement officer and not the executive officer of the farm credit system by eliminating many of the provisions which give him final approval of the acts of the associations and banks which should be determined by their directors.

If the power to control the employees and the board were thus definitely settled in the borrowers, and a system of election established which would make it difficult to control the election while assuring membership selection, the gravest danger in the pending bill could be largely met, but these amendments appear essential.

B. OTHER DANGEROUS FEATURES

1. The bill provides for raising the Commissioner loan from $7,500 to $50,000. This opens the door for the substitution of Commissioner loans for all Federal land bank loans, and might easily result in seriously crippling the associations and the banks. It might even put them out of business.

The Commissioner loan is an emergency loan, and should be treated as such. Seventy-five-percent loans are normally inflationary in character and should be avoided. With reasonable prices, this emergency lending should ultimately pass out of the picture and should not be made permanent.

2. The bill provides for making loans to corporations. This encourages corporation farming. We feel that the backbone of the Nation has been built around the ownership of farm lands by common farm people, and the loans to corporations only encourages further farm tenancy.

Corporation loaning may furnish the means for Government ownership of land, further increasing tenancy, and possibly reducing the position of the farmer to communistic serfdom.

We believe that loans to corporations should be eliminated.

3. The bill provides that losses be split on a 50–50 basis between the banks and the associations. We believe that the profits should be divided in a similar manner. The main reason that we have impaired associations at the present time is because the associations have absorbed all the losses and the land banks kept the profits.

4. The bill provides for the payment of one-eighth of 1 percent payment from the Federal land banks to the associations; that with the approval of the Governor, the boards may pay to the associations an additional three-eighths of 1 percent. We believe that the Federal land bank should pay one-half of 1 percent to the associations without reservation, leaving a full 1 percent, or two-thirds of the spread, to the banks.

The farm credit system was set up with the intent that farmers should own and control it. The farmer borrowers of the United States now have over $215,000,000 invested in the land bank system, the control of which would be largely taken away from them and placed in the hands of the Governor of the Farm Credit Administration at Washington. We believe that as much of the Government money has been returned, and is being returned, that control of this system should revert to the hands of its owners.

WE APPROVE—IF CONGRESS CUTS OUT OBJECTIONABLE PROVISIONS

If the above mentioned objectionable features are eliminated, or remedied, we feel that the bill has many good points and should pass. Among these favorable points are:

1. It pays the borrowers for their stock and substitutes member ownership.

2. Provides the associations with a definite income of from one-eighth of 1 percent to as high at one-half of 1 percent, and com-

pensation for loan servicing. While this is listed as an advantage, provisions should be made for the definite income to be not less than one-third of the 1½ percent spread between bond rate and loan rate, or one-half percent.

3. Would enable banks to pay dividends through creating a guaranty fund out of the Government funds in the system.

4. Provides means for keeping associations solvent.

5. Overcomes the difficulty of the stock not following the loan when the property is sold.

6. Provides for joint sharing of losses between banks and associations.

7. Guarantees 3½ percent interest until July 1, 1946, and thereafter based on the average cost of money, which should make low interest rates after July 1, 1946.

8. Provides for dividends to be paid on a patronage basis.

9. Assures associations and borrowers closer cooperation with the banks through the advisory committee which will help adjust or prevent differences.

10. Provides control of possible abuses from taking deficiency judgments.

11. Removes the burden of the Puerto Rico branch from the borrowers of the Baltimore land bank district.

12. Provides for variable-payment rates to meet trying times.

May we again repeat that the bill has many good points, all of which will be lost if we substitute a Government lending agency for the present farmer owned and controlled land bank system.

The farm organizations recognize the good points in this bill and are approving it only if proper amendments are made which will correct the tendency toward centralized control.

The next step after centralized control is dictatorship, and dictatorships lead to war. Let us keep the control of the farm credit system in the hands of its borrower owners.

The Great Salmon Mystery

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, October 6, 1941

ARTICLE BY RICHARD L. NEUBERGER

Mr. McNARY. Mr. President, in the September 13, 1941, issue of the Saturday Evening Post is contained a challenging article by Richard L. Neuberger, a thoughtful journalist of Portland, Oreg., on the subject The Great Salmon Mystery. I ask unanimous consent to have the article printed in the Appendix of the RECORD. I have obtained an estimate from the Government Printing Office which indicates that the article will take 3¾ pages of the RECORD and will cost $168.75.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post of September 13, 1941]

THE GREAT SALMON MYSTERY

(By Richard L. Neuberger)

Since the memory of man, Indian and white, runneth not to the contrary, the finest and strongest and stoutest-hearted salmon on earth have spawned in the headwaters of the Columbia River. But never will a salmon spawn there again. The last fish has struggled valiantly up the steep ascent from the Pacific Ocean to the distant creeks and glacier run-offs which are the Columbia's origin. Irrevocably, and for as long as steel and concrete shall endure, the fabulous 1,200-mile salmon migrations that have been one of the wonders of the animal kingdom are blocked by Grand Coulee Dam.

From late spring till early fall the most valuable fish runs in the United States go up the Columbia River from the sea. They are on their way to spawn. Some impulse, mysterious and unfathomable, urges the mightiest salmon, the Chinooks, back to the far-off upland tributaries where they themselves emerged from eggs 4 or 5 years earlier. Up the Columbia they thrash and push, surmounting waterfalls with incredible leaps and twisting through a gantlet of nets and lines and spears. They do not end their inexorable journey until they spawn; they do not spawn until they reach the shallow, gravelly creeks in the mountains; and after they spawn they die.

One hundred and forty miles from the river's mouth Bonneville Dam rears a 72-foot obstacle. Last year, up a labyrinth of ladders and stairways and chutes at Bonneville, 391,595 ascending Chinooks were counted. Is this number large or small? Who knows? The biologists do not. They have no basis of comparison; never before have the fish in a vast stream been counted at all. What they do know is that 450 miles above Bonneville, like a great crenelated fortress, stands the stupendous wall of Grand Coulee. Water crashing over its spillway falls twice as far as Niagara. That frowning barricade not even Moby Dick could scale. So the Federal Government has begun a prodigious experiment—an experiment to determine if salmon whose forbears for centuries have spawned in the Columbia's last, lingering reaches can be schooled to consummate their lives at least 500 miles downstream. Frank A. Bank, chief engineer at Grand Coulee, calls the scheme Uncle Sam's fish college.

"G'wan, you're fooling," scoffed one skeptical wildlifer when lean and saturnine Joe Kemmerich, superintendent of the biggest fish hatchery in America, told him the general idea of the undertaking. But Joe was in dead earnest, and so are thousands of men and women along the Columbia's swift course as they wait for results. Their livelihood may be at stake. The Government values the fish runs in the Columbia River at $250,000,000 and the annual return is never less than 4 percent. This $10,000,000 supports a lot of families as well as many entire river-bank communities. Nor are the consequences likely to be merely regional. Rich, flaky salmon from the Columbia River has been baked, boiled, fried, or served from the can in countless kitchens all over the land.

Only a part of the Columbia's salmon population heads for the 620 miles of river back of Grand Coulee. But that part includes the best Chinooks, the fish with the most endurance and vitality. It is this strain of salmon which must not be allowed to become extinct.

Uncle Sam's academy for fish starts enrolling pupils when these salmon thoroughbreds are trapped below Grand Coulee. Then they are rushed 45 miles in tank trucks to ponds alongside the immense hatchery which Joe Kemmerich operates in the Washington town of Leavenworth. There the salmon are spawned artificially. After about a year in hatchery troughs and pools the resulting offspring, approximately 6 inches long now, are put in the trucks and turned loose in streams entering the Columbia River below Grand Coulee Dam. The theory is that if one generation of Chinooks had an irresistible urge to spawn in creeks above Grand Coulee because that was the scene of their early life, why will not the next generation of Chinooks go back to tributaries below Grand Coulee if that was where they were released as baby fish?

"Thus," announces the United States Fish and Wildlife Service reassuringly, "the hatchery-reared fish will return to the water in which they were planted, establishing new and natural runs in those streams."

Will this idea work? Government experts think so, but admit there will be no conclusive answer for 4 years—not until the salmon now being propagated artificially at Leavenworth come back up the Columbia to spawn. Will they continue on to Grand Coulee, over the route their ancestors traveled, and perish buffeting its cement ramparts? Or will they wind off toward their new habitats?

The ultimate outcome of this novel plan is only a single phase—albeit, a vital one—of the Great Salmon Mystery. All sorts of other questions must be settled, too.

Are enough Chinooks getting upstream past Bonneville Dam? Will the fingerling fish, on their way down to the Pacific, scoot safely through Bonneville's turbines or will they be mangled by the whirring propeller blades? What will be the effect of additional dams projected for the Columbia's tributaries—the Snake, the Umatilla, the Willamette? Will Congress accept the recommendations of the Army engineers for seven more big dams across the main stem of the Columbia?

What then? Do fish and civilization mix? Can salmon survive river pollution and increased cutting of the forests which guard the watershed? Will irrigation ditches be death traps for fish bound for both the sea and their spawning grounds? With what agility will fingerlings nurtured in hatchery pools dodge the trout and pike which are their natural enemies? Can the last untouched spawning ground in the Columbia Basin, Idaho's Salmon River, be kept that way? If the Salmon should be plugged too, how much hope will there be? Will the legislatures of Washington and Oregon generate sufficient political courage to shut off commercial fishing in the upper river?

THIS IS MY OWN, MY NATIVE SAND

A generation of salmon must live and die before doubts will be resolved. The situation today is so hedged about with imponderables that, after an exhaustive on-the-scene study, Dr. Willis H. Rich, eminent ichthyologist at Stanford University, could reach only this indecisive judgment: "The future outlook for the salmon fisheries of the Columbia River is not bright, but neither is it hopeless."

"You've got to remember," cautions Mike Hoy, master fish warden for the State of Oregon, "that you're not handling lumber or aluminum or iron ore or some other inanimate material. This is a problem which deals with living creatures, the strangest creatures in the United States of America. We're going to learn whether fish which absolutely must migrate upstream to perpetuate themselves can exist in a river system extensively developed for power, industry, and reclamation. Unfortunately this is something that can't be decided with finality in a laboratory. There are so many complicated factors involved that nothing but actual experience will tell the tale."

First and foremost among these factors is the fascinating life cycle of the great Chinook or King salmon. Tyee, the Indians call him. Far up the Kicking Horse River, in the shadow of the Continental Divide, Tyee bursts out of one of the four or five thousand eggs which his mother laid and his father fertilized. Then commences the obscure process by which Tyee comes to recognize the Kicking Horse from among the myriad of streams and creeks which rib the

Columbia River Basin. As Tyee increases in size the waves and eddies of the Kicking Horse caress his silvery sides and stir in him unforgettable sensations. But by the time half a year has passed, he is dominated by another urge, and he leaves the Kicking Horse and starts down to the sea. Only 6 or 8 inches long, Tyee must dart beneath rocks and logs to escape fish that would eat him, and often rapids leave him stunned and sore.

The Kicking Horse pours its milky glacier-fed waters into the Columbia. Through the deep gorges of the Canadian Rockies Tyee floats, beneath the C P. R. bridge at Revelstroke and on across the American line. With a terrifying roar he is slammed through the generators at Bonneville Dam and drifts in a daze for the next day and night. The Columbia is broader by this time and Tyee feels the surge of the tide. It lifts him on rolling billows. So at last he comes to the ocean. There he lives for more than 3 years. Where he goes no man can say with certainty.

In those years, if he keeps out of fishing nets, Tyee becomes a great Chinook salmon. He may weigh 60 or 70 pounds. And then some gentle spring day he feels the pull of the north country once more. Across all that weary distance he remembers the icy reaches of the Kicking Horse. Salmon spawn in the fall, but Tyee begins his migration in May, for he has a long way to travel. He must journey more than a thousand miles, and his belly bulges with rich oil to carry him on his course. After he enters the mouth of the Columbia he never feeds again, although he may snap angrily at a fisherman's spinner. The surplus oil padding his sides must take him home.

Nets of all descriptions stretch out for Tyee, but not for a dinner table was he destined. At Bonneville he flips up fish ladders, which are like watery staircases, and a click tells that he has been counted along with thousands of his kind. Other tributary streams beckon invitingly, but Tyee knows where he is bound. Celilo Falls presents a 15-foot bastion behind a plumelike curtain. Tyee must leap four times before a mighty effort takes him over the brink and into the smooth water above. He barely evades an Indian's spear and continues upstream.

And finally, in the sharp mountain autumn, "home is the sailor, home from the sea." Tyee has returned to the Kicking Horse. Beside him he notices a long, tapering female salmon. They thrash upstream together. Near the gravel bar where Tyee himself was spawned 5 years before, the female hollows a shallow pocket and deposits her eggs. With heavy rushes Tyee, too, scoops away the pebbly bottom and hovers over the eggs. His life is completed now and so is that of his mate. Out of the 259,000 square miles of the Columbia's watershed they have found the place they sought. The urge which carried them from the ocean to the core of the Rockies is gone and with it their last energy. They drift down the Kicking Horse, blind and battered. Before another sundown they are dead.

This is the life span of the Chinook salmon, the great fish of the Pacific seaboard. But Tyee's offspring will never spawn in the Kicking Horse. Instead they are to be enlisted in Uncle Sam's fish school and driven on the most remarkable ride ever taken by salmon or, for that matter, by any other fish.

Registration for the school takes place in the three fish ladders which ascend Rock Island Dam, a long, low barrier built across the Columbia, 150 miles below Grand Coulee, by a power company. In these ladders Joe Kemmerich and his assistants have placed fish traps. When a trap is full a worker in rubber boots sloshes in with a net and scoops out the scrap fish—suckers, pike, and eels. This cuts down the mortality among salmon eggs and fingerlings. Then the trap, with water and fish and all, is slowly hoisted 25 feet in an electrically operated elevator shaft.

Waiting for this cargo of thrashing, flipping salmon is a fleet of eight tank trucks. Each truck cost $7,638, holds 1,000 gallons of water, and this is chilled to the glacial temperature of the Columbia by a compartment packed with nearly a ton of cracked ice. Two big pumps maintain the oxygen supply in the tank. Dials show the driver the temperature and pressure of the water, which he can regulate with valves.

At the height of the fish runs the trucks travel the highway from 4 in the morning until midnight. The traps at Rock Island fill as fast as porridge bowls. "These aren't meat-packed fish you're carrying," Joe Kemmerich admonishes the truck drivers, who last year drove a total of 102,784 miles. "They're fish to reproduce thousands of other fish later on."

This program costs the Government $3,510,000. At Leavenworth the fish are dumped into holding ponds along Icicle Creek, where they are collected and spawned artificially. The eggs then are put in hundreds of trays and troughs until the fingerlings emerge. Today, at Leavenworth, 7,500,000 baby fish are being fed.

There are more than 100 ponds and pools. Twenty-five thousand pounds of ice are manufactured each day for the trucks alone. When it was feared that Icicle Creek might not provide the 173,000 gallons of cold water required every hour, a 2,600-foot tunnel was drilled through granite from the creek's source to the bottom of Snow Lake. For this job, rangers in the Wenatchee National Forest had to construct 6 miles of mountain trail, and 230 tons of supplies were hauled to Snow Lake on pack horses. A series of five dams on Icicle Creek supplements the water-control system.

After the fingerlings have been in the hatchery about a year they are taken in the tank trucks to tributaries which enter the Columbia below Grand Coulee Dam. The little Chinooks are emptied into the Entiat River and Nason Creek because for them fast water, flecked with whitecaps, has the greatest lure. The blueback or sockeye salmon, much smaller than the Chinooks, are released in the Wenatchee and Okanogan Rivers, for they spawn only in streams with lakes at their source.

Is this scheme foolproof? Just in case it isn't, not all the salmon trapped at Rock Island are being chauffeured to Leavenworth for artificial propagation. Some are hauled directly to the Wenatchee, the Entiat, and the other streams where the fingerlings are turned loose. The haul to Osoyoos Lake, near the rise of the Okanogan, is 155 miles, and the trucks must be reiced at way points. When these adult fish first were released, many of the West's leading biologists came out with pup tents and bacon and beans, and camped right along the bank to see what would happen. The salmon uniformly turned around and started back downstream toward the Columbia and their distant spawning grounds above Grand Coulee. But grilles had been set in the water, and they pushed against the grating like bears in a cage. A few Chinooks got through a faulty weir on Nason Creek and a week later battered out their lives against the masonry cliffs of Coulee. The bulk of the salmon, however, at last tired of bumping the grilles. They whipped about and, while the naturalists watched in wonder, went upstream to the gravel shoals and spawned.

Fred J. Foster, assistant regional director in the Northwest for the Fish and Wildlife Service, explains this alternative plan: "We are releasing some of the salmon as adults because we don't want to put all our eggs in one basket. We are working with many unknown quantities and we must check and double-check all the time. Although we are very hopeful about the entire situation, this is certainly a case where an auxiliary plan is advisable."

Transporting the salmon, adults as well as the little fish, exacts an operating cost of almost $100,000 annually. In 1944, Joe Kemmerich says, the program will be tapered off and perhaps eventually abandoned. That year the migrating salmon will not be trapped. Many of them will be let past Rock Island. They will be the first graduates of the fish university to come back upstream. They will be the salmon which, in the past year as fingerlings, have been acclimated to the new spawning spots. Then the test will be at hand.

If the Chinooks turn off up Nason Creek and the Entiat, and the bluebacks seek out the Okanogan and the Wenatchee, the experiment will be a brilliant success. The fish runs of the upper river will have been saved. But if Tyee's offspring and thousands of other salmon continue up the Columbia and hurl themselves at Grand Coulee, the outlook will be dismal. Artificial spawning on a stupendous scale might offer the only possible hope; the present program would have to be expanded and prolonged indefinitely, with results highly dubious at best. Inferior fish would be certain.

Downstream at Bonneville the Government has even more money invested in ways and means of sustaining the Columbia River salmon runs. The $7,022,000 fish ladders circumventing Bonneville Dam, which is only a fraction the size of Grand Coulee, but nevertheless quite a project, have been in use 3 years now. In 1940 a total of 391,595 Chinooks and 148,808 bluebacks were counted on their way up the cascading steps. This fails to indicate the true quantitative ratio between the two species, however, for while bluebacks average only 4 pounds the Chinooks average 23 and sometimes a sovereign of the river will weigh 100 pounds or more.

Has the Bonneville count any bearing on the great salmon mystery? Some skeptics confess they are surprised. Dr. William L. Finley, vice president of the Izaak Walton League of America, who thinks the Government has gone "dam crazy," admits the Bonneville fishways are by far the best ever built. And Prof. Lawrence E. Griffin, of Reed College, in Portland, while still afraid that the fisheries face a bleak future, concedes he was wrong in his original estimate of the ladders at Bonneville. "I don't grant yet," says he, "that enough salmon are passing the dam to keep the runs at their current level. How do we know what number of fish were in that stretch of the Columbia before the river was blocked and counting began? But I cheerfully admit that a lot more salmon are climbing the ladders than I expected."

The Bonneville passages for salmon have brought into existence an entirely new civil-service classification, that of fish counters. This is the first tally of fish in a major stream. The counters get 60 cents an hour and must be able to recognize on sight the species which inhabit the Columbia. On platforms in summer and in doghouselike shelters in stormy weather, they keep count with little meters as the fish slip through apertures at the top of the ladders. The busiest day the fish counters ever had was in September 1940, when 33,900 Chinooks turned the staircases into a milling mass of fish. Onlookers' hearts beat faster as they watched the spectacle.

PITY THE POOR FISH

Naturalists are pretty well agreed that the fishways at Bonneville have boosted the adult salmon upstream past the dam. But an equally essential phase of the life cycle of the Chinooks is for the fingerlings to get down to the sea, and here the experts have their fingers crossed. The Bonneville powerhouse is honeycombed with fingerling bypasses,

which are chutes twisting through the concrete. What happens, however, to the baby fish that drop into the penstocks? Do all of them survive the turbine blades? What about the maelstrom of water at the foot of the spillway? Will the suddenly changing pressure give fingerlings the bends, like divers yanked between levels too rapidly?

Oregon's Fish Commission has released a big batch of fingerlings above Bonneville Dam and another batch below. The fins of the two batches were carefully clipped in different manner for identification. When these fingerlings return from the Pacific as adult salmon, the markings will tell plainly the effect of Bonneville on the little fish.

Not long ago Federal and State biologists turned loose salmon fingerlings above the Portland General Electric Co. Dam, which spans the Clackamas River in Oregon. A diver went below and watched the fish come out of the tailrace. What he saw was a bloody mess. The fingerlings had been chopped to pieces in the generators. Bonneville's massive turbines have much more room, and naturalists believe this will not be duplicated there, but they are making no unqualified predictions. The size of the Government dam prevents a similar emphatic test, although hunks of balsam wood have passed through the powerhouse in fairly good shape.

WHEN KIPLING REALLY LIVED

The Clackamas was once alive with salmon. Whopping Chinooks spawned in its mountain-locked headwaters and went down to the Columbia and so to the ocean. Then dams at Cazadero and River Mill, built without adequate fish ladders, depleted the runs at a terrific rate. The Chinooks speedily disappeared from the river. Where a mustached little Englishman had caught 16 big salmon in 6 hours, fish virtually ceased to come. The Englishman's name was Rudyard Kipling and after he had fished in the Clackamas in 1888 he wrote back to the Civil and Military Gazette of Lahore, India:

"I have lived! The American continent may now sink under the sea, for I have taken the best that it yields, and the best was neither dollars, love, nor real estate. Hear now, gentlemen of the Punjab Fishing Club, who whip the reaches of the Tavi, and you who painfully import trout to Ootacamund, and I will tell you how I went fishing and you shall envy. * * * There be several sorts of success in this world that taste well in the moment of enjoyment, but I question whether the stealthy theft of line from an able-bodied Columbia salmon who knows exactly what you are doing and why you are doing it is not sweeter than any other victory within human scope."

As on the Clackamas, innumerable salmon spawning grounds in the Columbia Basin have been blocked off by dams built without safeguards for fish. In the opinion of B. M. Brennan, veteran director of the Washington State Department of Fisheries, this is one of the basic reasons why 43,000,000 pounds of Chinook salmon were caught on the Columbia River in 1883 and only 16,000,000 pounds in 1940. Brennan blames both the Government and private power companies. For example, the Black Canyon Dam, constructed by the Bureau of Reclamation across the Payette River, in Idaho, ruined a big Chinook spawning area and the privately built Wallowa Lake Dam in Oregon completely destroyed a valuable run of bluebacks. Congress in 1934 tried to prevent a repetition of this by ordering that any Federal or private project built in the future must make adequate provisions for the migration of fish.

Brennan believes that the next step in the protection of the Columbia salmon runs must be to bring Idaho into a tri-State compact with Washington and Oregon for the management of the fisheries in the basin. This has never been done in the past, because the Columbia does not wash Idaho soil at any point, yet the Columbia's largest tributary, the Snake, threads across Idaho for 750 miles. And of the Snake's largest tributary Brennan recently declared: "The Salmon River in Idaho is the only major Chinook salmon spawning ground remaining in the entire upper Columbia River watershed that is generally unaffected by dams, water diversions, pollution, and other hazards to the future abundance of salmon."

Both private and Government dams are athwart the Snake itself, although some of these are above the impassable barrier of Shoshone Falls. Idaho is one of the principal irrigation States and its farmers constantly demand water for their land and kilowatts to pump it there. But the Salmon is a wilderness river and to date its peaks and crags have stood off civilization's encroachments. Along with its various forks, the Salmon flows in chasms nearly a mile deep. It empties into Hell's Canyon, where the Snake has trenched a 6,100-foot gash which is the deepest abyss on the continent. Most of the Salmon's course is through the fastnesses of the Nez Percé, Idaho, Challis, and Salmon National Forests. No boats, only fish on their way to spawn, have ever traveled the Salmon upstream, and so it is known in Idaho as "the river of no return."

WITH DRAWN SWORDS, IF NEED BE

A graying Scotsman, Hugh C. Mitchell, Oregon's head fish culturist, says, "I wouldna be surprised if the Salmon is now the gr-reat spawning spot of the Northwest. We must protect that river with drawn swords, if need be." Keeping the Salmon River open and uncontaminated is a No. 1 order of business among fishermen and wildlife enthusiasts. Federal experts, now surveying this wilderness river, believe it is fully as important from a Chinook propagation standpoint as the main stem of the Columbia. Lloyd Royal, biologist for the State of Washington, contributes the added fact that most of the Columbia River steelhead trout passing Bonneville Dam, and 185,174 did so last year, go up the Salmon to lay their eggs. With these circumstances in mind, the Washington Legislature memorialized Congress to appropriate funds at once for the preservation of fish-spawning areas in Idaho.

Congress is now considering a proposal by two Members from Oregon, Senator CHARLES L. MCNARY, Republican minority leader, and Representative WALTER M. PIERCE, a New Deal Democrat, for a $23,700,000 navigation dam across the Columbia at Umatilla Rapids, midway between Bonneville and Grand Coulee. Yet Royal believes this big barrier would have infinitely less effect on the Chinook runs than much smaller dams wedged into the upper reaches of the Salmon River. "If Umatilla Dam is fitted with the same kind of fishways as Bonneville and Rock Island," he explains, "I'm sure it won't do any material harm to the salmon." Maps of the United States Geological Survey show the Salmon studded with potential dam sites, but wildlifers, after giving in or being vanquished on practically every other river in the far West, say this is where they die with their boots on. They think hope lasts as long as the Salmon stays untrammeled. Hugh Mitchell underscores the fact that a little hatchery near the top of the Salmon River, within 15 miles of where Lewis and Clark crossed the Continental Divide and limped down Agency Creek, used to collect as many as 6,500,000 eggs annually. This is half the number Joe Kemmerich and his aides put in trays last year at the largest fish hatchery in the country.

SALMON VERSUS PEOPLE

In this entire situation the new dealers and their bitter foes, the utilities, are the joint targets of naturalists and fishermen. Some strange political alliances have resulted. When Dr. Finley, of the Izaak Walton League, claimed that plans of the Army engineers for high dams on the Willamette River would endanger that tributary's Chinook runs, he was simultaneously rebuked by the Oregon Statesman, newspaper of the State's anti-New Deal Governor, Charles A. Sprague, and by Representative J. F. Hosch, New Deal leader in the Oregon Legislature. "Must the Willamette Valley," indignantly asked the statesman, "forever remain a wilderness so that the supply of salmon may be maintained?" And Hosch wrote Finley accusingly, "You unquestionably are more concerned about a few fish than about the people who inhabit our land."

The controversy involves the whole development of the Northwest, which is the country's final frontier. "Salmon and civilization don't mix," say the fishermen. J. A. Craig, biologist for the Fish and Wildlife Service, recently decided that lumbering, mining, irrigation, and power production "are practically all deleterious to the productivity and survival of the fish population of the Columbia River." But today the Northwest is in the midst of the biggest industrial boom in its history. Forests are being felled to provide lumber for ships and barracks. New mines are being tapped. Soon plants along the Columbia will turn out nearly a third of the Nation's expanded aluminum production. Irrigation canals are being dug through the dry uplands.

Rivers glutted with logs are no good for fish, and logged-off hillsides are no good for rivers. Many a migrating salmon has accidentally poked into an irrigation ditch and ended his odyssey in an alfalfa field. Three hundred dead fingerlings were just found in a flume near Grants Pass, Oreg. Factories mean cities and cities mean pollution. The Willamette River is so full of offal and chemical wastes that its fall run of Chinooks is gone, literally choked to death. The spring run has survived only because of the fortunate coincidence that it comes upstream when freshets from the mountains immerse the excretion and sawdust and trash with which Portland clogs the waterway.

After fingerlings released below a Willamette River bridge had died and floated belly up in less than 4 minutes, William J. Smith, president of the Oregon Wildlife Federation, announced grimly that 125,000 sportsmen in the State were ready for political action if something is not done. In an attempt to prevent spread of these conditions, Dr. Paul J. Raver, Bonneville Dam administrator, is requiring as a condition of power sales the elimination of waste products.

PROTECTIVE MEASURES

The Washington Department of Fisheries is pressing for legislation to compel the screening of all irrigation canals and has set up nearly 300 filters already. Oregon's fish commission wants trolling in the ocean rigidly controlled, and its chairman, John C. Veatch, believes no commercial fishing should be allowed on the Columbia above Bonneville Dam. Senator MCNARY, of Oregon, believes that trolling at sea must be closely regulated. He has introduced a bill giving the Fish and Wildlife Service the right to prevent the catching of salmon under certain weights and sizes. "We know," he explains, that the Chinooks attain most of their growth in the ocean. It is an economic waste to permit the catching of a 9-pound salmon which in 3 or 4 months might weight 25 pounds. The reduction of spawning grounds in the upper Columbia makes more imperative than ever that we get every possible ounce of food value from the salmon which are netted in the Pacific." MCNARY says he has assurances that Canada will parallel any such action taken by the United States. A

number of wildlife experts hope to forbid Indians from spearing and netting the homeward-bound salmon at Celilo Falls, but others ask if we take away even this from the country's original owners what are we accusing Hitler of, anyway?

Ever since the first cannery was built on the Columbia 75 years ago salmon have been a red-hot political issue in the Pacific Northwest. Six times the people of Oregon have voted on referendums concerning the protection of fish. The voters of both Washington and Oregon resorted to action at the polls to do away with the basketlike fish wheels that never gave the Columbia River salmon half a chance. In 1926 Oregon knocked them out, and in 1934 Washington followed suit. Fish politics conform to no standard pattern. Rufus Woods, stanch Republican editor of the Wenatchee World, is sure the Leavenworth hatchery not only will salvage the upper river salmon runs but increase them immeasurably, although New Deal supporters will pray gratefully if the fish just hold their own.

A ONE-REGION FISH

The Portland Chamber of Commerce has warned the Izaak Walton League not to "undertake to thwart human progress." Advocates of Columbia River development minimize the damage which will be done to the Chinook runs. They say the naturalists exaggerate their alarm. But they contend that the development is worth the damage, if damage there will be. They cite the huge aluminum plants being rushed to completion as tangible evidence of benefits from Grand Coulee and Bonneville. They ask if the principal power river of the continent should be left unharnessed for fear of throwing the life of a few million fish out of kilter.

The naturalists, while not definitely committing themselves until 1944, have replied merely with a warning that power can always be harnessed, but that once the fish are gone they are gone for good. Salmon runs rarely return to a river from which they have vanished for a complete cycle. Empty streams in Maine attest to that. And one or two wildlifers have hinted that after the shooting stops in Europe, the taste for Chinook salmon may be more universal than the demand for aluminum.

There will be a lot of salmon in the world even if those in the Columbia River die out, but not Chinook salmon. Of 250,000 cases of Chinook canned everywhere in 1939, approximately 210,000 came from the Columbia River. The rest was scattered among Alaska, Puget Sound, and British Columbia. Tops among eating salmon is Columbia River Fancy Chinook. A case of one-pound flats brings $26.50, while a case of Alaska Red salmon of the same brand is worth only $14 and Alaska Pink salmon $8. Its price has soared. Less than half as many cases are packed along the Columbia now as in 1911, yet the present pack is worth $1,000,000 above the 1911 output. And, by and large, the Chinook is a one-region fish. Twenty-five years ago the Government tried to transplant fingerlings from the Columbia's tributaries to New England waters. The result was a puny 3-pound salmon. The reason for this was as inexplicable as the Chinook's other propensities. Some scientists said it was the water, some said the feed, others said the climate; but none knew.

Since 1935 the salmon catch in the Columbia has maintained a fairly steady level. The critical period for this traditional industry of the Northwest has now arrived. By 1945 at the latest the great salmon mystery will be unraveled for better or for worse.

"Civilization meant the end of the bison of our plains," comments one naturalist. "We are going to discover whether new and unique precautions can thwart civilization's assault on the finest fish in North America."

Inland Waterway Development Vital to National Defense

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

STATEMENT BY THOMAS E. LYONS

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks, I include the following statement entitled "Inland Waterway Development Vital to National Defense," by Thomas E. Lyons, Chief of the Division of Transportation, Bureau of Foreign and Domestic Commerce, Department of Commerce:

INLAND WATERWAY DEVELOPMENT VITAL TO NATIONAL DEFENSE

(By Thomas E. Lyons, Chief of the Division of Transportation, Bureau of Foreign and Domestic Commerce, Department of Commerce)

It has been said that the World War was won on the Monongahela River because that waterway afforded facilities for the shipment of raw materials to the giant industries manufacturing weapons and materials for weapons which finally overcame the Germans on the battlefields of France.

While railroads were the backbone of our transportation system during the first World War, as they are in the present emergency, new forms of transportation have been developed and old methods have been improved to the point where they can materially supplement the railroads, specially during periods of traffic strains.

In addition to the Monongahela River, which has been considerably improved for navigation since World War days, many other waterways and channels have been developed or created to aid the orderly flow of waterborne commerce. Extension of pipe lines during this same period and the development of motor transportation have made these agencies important mediums of interstate commerce.

HOW INLAND FREIGHT MOVES

According to a recent estimate, 1939 inland traffic was divided among the several transportation agencies substantially as follows:

	Freight revenue (ton-miles)	Passenger (miles)
	Percent of total	*Percent of total*
Railways:		
Steam	62.5	8.3
Electric	.1	.3
Inland waterways:		
Great Lakes	14.2	.3
Rivers and canals	3.7	.2
Petroleum pipe lines (excluding gathering lines)	9.5	
Highways (including private automobile traffic)	10.0	90.7
Airways	.9	.2

The foregoing table indicates that 18 percent, or nearly one-fifth, of the total ton-mileage of our present inland commerce moves by water.

Compared with pre-war years, traffic on inland waterway and coastal canals had made great strides, as the following pertinent statistics of our inland waterways for the year 1939 compared with 1914 indicate:

	1914	1939
Length (miles)	28,933	29,290
Traffic (short tons)	137,180,000	329,400,000
Expenditures (new work and maintenance)	$29,246,000	$78,342,453

The tonnage indicated for 1914 does not include traffic originating at Great Lake ports, but does include the volume moving through connecting channels of the Great Lake system. This also applies to the tonnage indicated for 1939.

Although the increase in inland waterways mileage has been slight during the past 25 years, much has been done in deepening channels and adding facilities to bring these traffic arteries to a fuller efficiency. Many of the streams which in 1914 were suitable only for boats of the shallowest draft are today providing safe navigation for vessels drawing 9 feet or more.

INLAND WATERWAYS HAVE LONG SERVED THE NATION

The Mississippi and other inland rivers were prime factors in the early development of the Middle West. The friendly waters of the Ohio, Missouri, and Columbia Rivers made it possible for Lewis and Clark to conduct their Northwest expedition, thus opening that vast region to settlement.

St. Louis and other cities along the Mississippi had developed into important trading centers long before railroads were introduced in the region. Following their coming, however, river traffic declined sharply.

The Erie Canal and other artificial waterways which had contributed so much to the early development of the country also suffered with the introduction of competing forms of transportation which provided faster service, and many of these waterways, including the Chesapeake and Ohio Canal connecting Washington, D. C., and Cumberland, Md., ceased to operate.

During the period of rapidly expanding railway facilities our waterways were seriously neglected. In 1916, however, when railways became overtaxed with the burden of the first World War effort, interest was renewed in waterways.

One of the principal functions of the Council of National Defense, established in 1916, was to investigate and make recommendations to the President on the utilization of inland waterways. Four million dollars were allocated by the Emergency Fleet Corporation for the construction of steel barges and steel tow boats to be used for transporting coal and iron ore between St. Louis and St. Paul.

This traffic did not develop as planned due to inadequate terminal facilities. A similar plan for moving coal and ore on the upper Mississippi is now being considered.

IN THE FIRST WORLD WAR

In 1918 the Director General of the railroads created a committee on inland waterways to take over these functions of the Council of National Defense. This committee immediately undertook a study to determine methods by which various inland waterways, including the Mississippi River, between St. Louis and New Orleans, and the Warrior River, could be utilized.

As little commerce was moving on these streams and floating equipment was not readily available, the Railroad Administration undertook to provide barges and tugs and engage in the construction of terminals necessary for the handling of waterway traffic.

AFTER THE FIRST WORLD WAR

The Transportation Act of 1920 provided for the transfer to the Secretary of War of boats and other transportation facilities on

inland, canal, coastal, and coastwise waterways, and directed that office to take such action as might become necessary to continue their operation.

Under the direction of the Secretary of War, the lower Mississippi and Warrior lines were operated until Congress provided for the creation of the Inland Waterways Corporation in 1924. Since that time the operation of the Inland Waterways Corporation has been extended to the upper Mississippi and the Missouri Rivers.

The purpose of creating the Inland Waterways Corporation (Federal barge line) was to demonstrate the feasibility of the utilization of inland waterway transportation on the Mississippi and Warrior Rivers and connecting waters.

That the point has been proven is clearly shown not only by the increased traffic of the Federal Barge Line but by the many other common carriers, contract carriers, and private lines which have established profitable operations on the Mississippi and its tributaries, including the Ohio River.

Traffic on the Mississippi waterway system has grown from 52,000,000 tons in 1923, the year before the Inland Waterway Corporation started operations, to 76,000,000 tons in 1939.

FACILITIES BEING FULLY UTILIZED

The strain on rail transport due to defense demands has already resulted in greatly increased inland waterway activity. All available waterway equipment is now being utilized in moving raw materials and finished products.

Larger tows of barges than customary are now assembled for the movement of steel from the producing areas of Pittsburgh and Birmingham to the Gulf where it is used in the fabrication of ships or for other construction projects. On the return trip raw materials for inland plants are carried.

For years the Mississippi River system has been used extensively for the transport of petroleum products in the middle western area. It is now being utilized to relieve the oil shortage on the eastern seaboard. Borderline distribution areas formerly served from Atlantic ports are now being supplied by extending operations of oil depots located on inland waterways.

The Federal Petroleum Coordinator recently announced that arrangements had been made with one of the larger oil companies for reversal of the flow in its pipe lines connecting New York with the Ohio River. This pipe line has been used for carrying refined products westward; it will not carry crude oil to the East.

Present plans provide for the delivery of Texas and Louisiana crude oil by barges at Midland, Pa., on the Ohio River, from whence it will be carried by pipe line to the New York area. As a crude line it will deliver 25,000 barrels daily.

BARGES CARRY PLENTY OF FREIGHT

Barges up to 2,800 tons now ply between St. Louis, New Orleans, and Mobile, by way of the Mississippi and the Gulf Coastal Canal. A barge of this type has a capacity equal to 60 freight cars. A 1,200-ton barge carries as much as 30 cars. In other words, one 2,800-ton barge or two 1,200-ton barges are capable of carrying freight in excess of that hauled by the average freight train.

Additional floating equipment and the adoption of a practical plan for extension of the interchange of barges between carriers would materially increase the effectiveness of our inland waterway operations and aid further in the defense effort. Shortage of steel, however, has limited the amount of material available for the construction of additional equipment.

The Maritime Commission is now considering the building of concrete barges of 28½ feet draft to carry oil and other bulk commodities for operation on deep-sea lanes. Their size and draft, however, would prevent the use of such equipment on inland waterways.

The British Admiralty recently announced that it is building a considerable number of ferro-concrete barges which have a carrying capacity of 200 tons and are constructed with shipshape ends.

They are intended for use in the various ports and river channels in England. While somewhat similar barges have been considered for operation on our inland waterways, no plan has as yet been developed for extensive construction of this type of equipment.

TRAFFIC ON THE GREAT LAKES

The annual report of the Chief of Engineers, United States Army, shows that the total United States commerce on the Great Lakes for 1929 amounted to 161,000,000 short tons, but that in 1939 this tonnage dropped to 141,000,000 short tons.

The 1940 figures are not available, but it is reasonable to assume that they will show a substantial increase over 1939. Traffic on the Great Lakes consists mainly of iron ore and grain moving from the Lake Superior area and coal being returned to the same region.

Records of the Sault Ste. Marie Canals are accurate indicators of traffic moving on the Great Lakes, as the bulk of the tonnage must move through these lanes. In 1929 a total of 92,622,000 short tons of freight passed through the Soo Canals, setting a record not theretofore or since equaled. Shipping officials and statisticians believed that this record would probably never again be attained.

Today shippers and steamship men on the Great Lakes predict that this season's freight shipments through the Soo Canals will exceed 100,000,000 tons.

A 75,000,000-ton ore movement is pointed out as the biggest single factor in establishing the new record. Grain and coal movements are also heavy. August shipments brought this year's freight movement through the Soo Canals to 68,500,000 tons.

The movement for September is expected to aggregate 14,000,000 tons and the cargo fleet will have another 6 weeks or more to operate during the current season. Freezing weather usually closes the Lakes to shipping late in November.

MORE ORE WILL BE CARRIED NEXT YEAR

Increased demands for steel for the national-defense program during 1942 definitely indicates that the ore movement on the Great Lakes must substantially exceed the record which is expected to be established this year. Plans are already being made to handle the increase. Five bulk freighters, each of 11,100 gross tons, are now under construction at Great Lakes shipyards and are expected to be ready for the 1942 season.

Recent legislation permitting Canadian flag vessels to engage in our lake ore carrying trade will also provide additional tonnage for this movement. This legislation was enacted too late to be of substantial benefit during the current season.

The Atlantic and Gulf Intracoastal Canals are also important from a defense viewpoint. Considerable quantities of essential commodities, including petroleum, lumber, phosphate rocks, sulphur, and cotton, move regularly over the various sections of these waterways.

THE MISSING LINKS

With the exception of a section in New Jersey, the Atlantic Intracoastal Waterway provides a 12-foot channel from Boston, Mass. to the St. Johns River in Florida and an 8-foot channel from the St. Johns River to Miami.

The Gulf Intracoastal Canal now extends from Apalachicola, Fla., to Corpus Christi, Tex., with a controlling channel depth of 9 feet. This project will eventually extend to the Rio Grande River at Brownsville, Tex.

These waterways are essential, not only for commercial and recreational vessels but they will provide a sheltered channel for the movement of shallow draft naval vessels, including destroyers, between the various bases on the Atlantic and the Gulf of Mexico, if necessity arises.

Until the missing New Jersey and Florida sections are provided, the full effectiveness of the Atlantic and Gulf Intracoastal Waterway system can hardly be attained.

Tribute to the "Unmuzzled" Press

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. JOHNSON of Oklahoma. Mr. Speaker, it is a genuine pleasure to add a few words to the many deserving compliments that have been paid the country press by Members of Congress and others during National Newspaper Week from October 1–7. Words of praise for the press have come from people of all walks of life and from every nook and corner of the United States. The country newspapers, including the small-town dailies, weeklies, and semiweeklies, have earned the many tributes paid them this week. The small-town paper has been referred to as a "symbol of the American way of life." Certainly it is a very important part of the American way of life. It has demonstrated that it is unhampered and unafraid. These so-called country papers represent one of America's really great democratic institutions.

The important part in small-town newspapers are playing in preserving American ideals as well as maintaining freedom of thought and speech cannot possibly be overemphasized. Because the country press is unhampered and unafraid it has long been a power for good in every community in all this land.

As long as we have an "unmuzzled" press the future of America is secure. May the influence of a free press live on and on with undiminished power.

A few weeks ago, in reply to a request from the editor of the American Press, I wrote a brief tribute to the country press that was printed in a recent issue of that publication, which I am pleased to include as a part of my remarks. It follows:

The small-town newspaper is as American as the village doctor or the little red schoolhouse. Through the years these many small voices have raised a united cry in defense of those principles which make America American—the freedom of speech, of worship, and of the press; life, liberty, and the pursuit of happiness. The countless millions of town and country people, the real America, who have relied upon their small-town daily and weekly newspaper not alone for a review of world events but also for

the molding of public opinion, have done so in complete confidence that their fellow citizens who own and operate these local enterprises are honest, "aboveboard," and are uninfluenced by the pressure of political cliques or the lure of high-priced advertising.

Morgenthau's Tax on Invested Capital Favors Wartime Babies

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

LETTER TO THE SECRETARY OF THE TREASURY

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter which I have sent to Hon. Henry Morgenthau, the Secretary of the Treasury:

MY DEAR MR. SECRETARY: I am confident that despite the pressure of your heavy responsibilities you will not consider it inappropriate for me, as a Member of Congress, to ask of you the time necessary to reply to several questions in connection with your advocacy of 100-percent taxation of any profits of corporations that exceed 6 percent of invested capital.

Is the proposal, in effect, to limit the "pay" of every dollar at work and at risk in trade and industry to 6 cents a year, regardless of the type of work or risk involved? In other words, to enforce a situation, exactly comparable to limiting the wages of a worker to a specified sum per year, regardless of the innumerable degrees of skill, risk, and effort involved?

I believe, from my daily contacts with scores of small businesses in my district, that many of them would be ruined by such a tax. Small enterprises depend on energetic use of limited capital—capital almost always painfully accumulated. Frequently these small capital investments must be turned over many times in the course of a year, if the little enterprises are to keep their owners' heads above water. The result of a very modest gain on each turn-over of the capital may be, it is true, a high percentage of the little man's precious capital at risk, and yet a small sum, indeed, in dollars. If all of that modest sum in excess of 6 percent on the small capital is to be taxed away, how can the little enterprise survive?

The little man, especially the small manufacturer, has his troubles holding his own at present. He gets no priorities. His manufacturing is stalled for want of goods and material. Your proposal would add to his perplexities. In what way would your plan assure him any returns on brains, good will, initiative, or genius?

Is it not true that, unlike the railroad or public utility, the advertising corporation or the service corporation has little capital assets? Their profits might be a cascade, but would not their earnings passed on to stockholders be a mere trickle?

Would not your profit-freezing device place a premium on waste and unwarranted costs? Plants would be unduly expanded and salaries improperly increased to avoid tax. Pay rolls would be augmented. Duplicate positions for friends and poor relatives would be set up. There would be no incentive for sharp trading or dealing at arms length with supply men.

Would there not be discouragement to efficiency? There would be no rewards—no incentive for watchfulness. Why watch the pennies? The Government would take the dollars saved anyway. Would not corporations, to cut down tax, be most extravagant in expenditures for equipment and material? Would not such spending unduly increase purchasing power, make goods more scarce, and encourage inflation?

While I am primarily concerned with the small businessman, I would inquire also as to the probable effect of your proposal on the larger concerns. I do not have in mind the great corporation alone, for it is conceivable that it could divert large amounts to strengthening its position. I do, however, wonder what would happen to the millions of stockholders, who own such enterprises and who have invested their savings without any forewarning that normal earnings might no longer be passed on to them.

Do not businesses, large and small, operate under widely varying conditions in respect of invested capital, and, therefore, would not such a proposal, as yours, in many cases result in unconscionably drastic hardship? What is your answer? My constituents are pressing me. They are frankly worried.

Would not your plan discourage almost to the vanishing point all desire to invest in any common stock? There would no longer be a real incentive to risk savings in common stock. Is it your desire to do away with public financing and substitute governmental financing as the only way? That, unfortunately, is the totalitarian way.

Would not, Mr. Secretary, such a limitation of the wage of capital result in about the same sort of situation as would follow from paying exactly the same annual wage to every wage earner, regardless of either his skill or family responsibilities or nature of his work?

I am anxious for some detailed explanation from you, and I have purposely not referred to the probable effects on initiative and enterprise which might result from taxing the man who has saved money and put it at risk in a business. At first blush, does it not seem: "Tails I lose, heads the Government takes."

By all means take profits out of war. Permit no war millionaires. But does not your plan take undue profits out of all business, let alone defense babies?

If your plan would take away 100 percent of all profits above the average for a number of years prior to the emergency, that would be universally acclaimed. But do you not lay down an arbitrary minimum 6-percent profit on invested capital, on all corporations—defense and nondefense, large and small? Your plan seems unrelated to the war.

Furthermore, there is no guaranty the 6 percent would be reached. Over the years most corporations never make 6 percent each year, and under you scheme losses of 1 year cannot be carried over into the next year to offset profits. A corporation may lose in several years—have 1 good year but pay heavily for the streak of good fortune. It could not lay up reserves out of such profits for any lean year to come.

Under your plan would not the well-managed and conservatively capitalized corporation be limited as to profits, the same as would the corporation with bloated capital and inefficient management?

I have had a study made of the effect of your tax on numerous corporations. I commend it for your study; the study follows:

THE INVESTED-CAPITAL TAX FAVORS THE "WAR BABIES"—PEACETIME INDUSTRY SUFFERS

The following tabulation gives a cross section of industry that would (1) suffer from your 6-percent invested-capital excess-profits-tax exemption, and (2) benefit from such a mandatory invested-capital base.

I. The sufferers

The three columns of figures show (1) the exemption per share at 6 percent calculated from Standard Statistics estimates, (2) the 1940 net income, and (3) 4-year average earnings (1936–39) adjusted for the so-called growth company amendments to the 1940 tax bill.

	6-percent invested capital exemption	1940 net	4-year average earnings (1936–39)
Autos and parts:			
Libby-Owens-Ford	$1.05	$3.97	$3.45
Chrysler	2.60	8.69	7.45
Cleveland Graphite Bronze	1.00	4.10	3.80
Electrical products:			
Chicago Flexible Shaft	1.75	8.33	9.35
McGraw Electric	.55	3.08	2.60
Foods:			
American Chicle	1.50	8.42	8.45
Mead Johnson	2.55	9.44	10.20
Drugs:			
American Home Products	.75	5.32	5.15
Bristol-Myers	.75	3.73	3.60
Sterling Products	1.65	5.30	5.40
Retail:			
Green (H. L.)	1.20	3.46	3.30
Murphy (G. C.)	2.05	6.58	6.00
Penney (J. C.)	1.85	5.91	6.20
Tobacco:			
Liggett & Myers	2.65	6.62	6.30
Philip Morris	2.60	8.14	7.60
Miscellaneous:			
Bulova Watch	2.00	7.27	6.70
Coca-Cola	1.00	6.77	6.60
Columbia Broadcasting	.55	2.92	2.65
Melville Shoe	.60	2.56	2.96
Youngstown Steel Door	.45	2.10	1.60

II. The beneficiaries

Companies in the following list have built up large capitalizations through the years. A majority of these concerns benefit directly from defense. The three columns are identical with those in the first group.

	6-percent invested capital exemption	1940 net	4-year average earnings (1936–39)
Rail equipment:			
Pullman	$3.10	$1.96	$1.63
American Car & Foundry	6.00	5.23	[1]2.70
Rails:			
Atchison-Topeka	18.00	2.09	1.00
Great Northern	11.50	4.09	3.00
New York Central	8.75	1.75	.75
Pennsylvania	5.90	3.51	1.95
Southern Pacific	14.00	2.47	1.35
Union Pacific	18.50	6.96	6.50
Steels:			
Bethlehem Steel	8.00	14.04	3.70
Crucible Steel	5.30	10.24	1.60
Jones & Laughlin	9.50	5.60	.05
Republic Steel	2.60	3.32	.85
U. S. Steel	8.10	8.83	2.30
Youngstown Sheet & Tube	9.40	5.96	3.30
Miscellaneous:			
Mack Trucks	4.00	3.02	1.40
White Motors	3.20	3.12	.35
Worthington Pump	4.30	6.20	.40

[1] Deficiency.

Conclusion

Even a casual examination of the two groups above indicates that war babies—benefiting enormously from the defense program—find our defense program very profitable. Earnings this year and last are in practically every instance far in excess of the 4-year average.

Consumer-goods industries—pinched by priorities and virtually voiceless in our rising war economy—not only show very modest earnings gains over the base period, but would find it practically impossible to even equal 4-

year average earnings on a 6 percent of invested capital basis for excess profits.

Mr. Secretary, your proposal would severely penalize the small, well-managed company at the expense of the big, poorly run outfit that needed a war to create sufficient demand for full operation of its production capacity, top heavy by any normal yardstick.

Cordially yours,

EMANUEL CELLER.

Grand Coulee Dam

REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. LEAVY. Mr. Speaker, on last Saturday the first generator came into production at Grand Coulee Dam. In the Washington Star of yesterday, October 5, on page A–7 of part 1 there were pictures of the dam and generator and statements concerning it. In that statement there are two glaring inaccuracies. I am sure these inaccuracies were not intentional, and I do not mean even remotely to infer that they were made in bad faith. However, if these statements represented the facts, my representation through the last 5 years in securing millions of dollars in appropriations for this project would have been wrong.

I feel, therefore, that it is important that a correction be made of 2 statements contained in this news item, both of which are important and material statements of fact. The 2 statements that I refer to are: First, the statement that the dam will produce power for a city of 200,000, and the second statement is that the dam is located in northern Washington, about 100 miles north of Spokane. The actual facts are that generator No. 1 produces 108,000 kilowatts of electricity, which is enough to care for the needs of a city of 200,000 people. There are 17 more such generators to be installed at that project.

The full installed capacity of Grand Coulee Dam will supply not only the needs of a city of 200,000 people, but would supply the needs of 18 such cities, or a single city of 2,600,000 people.

Now, as to the second statement relating to the location of this dam, that also is grievously in error, because if it were located 100 miles north of the city of Spokane, that would place it 20 miles north of the International Boundary between the United States and Canada at a point in British Columbia. The dam is actually located by air line about 80 miles west of Spokane and slightly north.

Ordinarily I would not have made mention of this matter but for the fact that today, with the crying need for electrical energy and a shortage so critical as to virtually be causing a bottleneck in our defense program, it is extremely important that both Members of Congress and those groups of persons acting in official capacities in numerous executive agencies have a full and complete knowledge of the facts surrounding this mighty project that is frequently being referred to as the eighth wonder of the world. Here by an expenditure of public funds we can rapidly secure the greatest volume of electrical energy at the lowest cost, being at one-third of the cost of energy produced by new construction in any other part of the Nation, by reason of the fact that we have the dam completed and all the major facilities installed.

I have earnestly and to the best of my ability represented to this Congress from time to time the tremendous importance of speeding this giant development to completion. I would like to see orders immediately placed to install all the generators that the project is constructed to utilize. There should be a deficiency appropriation of $12,000,000 at once in order to provide for the earliest and orderly installation of at least 15 generating units out of the 18, and, at the very minimum, an appropriation of no less than $6,000,000 should be made to place orders for additional generators and complete the east powerhouse.

Mr. Speaker, I have tried to make clear in this brief space of time what this stupendous structure means to our national defense and to correct the unintentional errors that appeared in the Washington Star, because I know that when we once fully understand the magnitude of this invaluable national asset we will rapidly take the steps to bring it into full use.

Russia and Its Constitution

REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. JONKMAN. Mr. Speaker, I see in the newspapers that the New Deal, taking Russia into its arms and feeling the warmth of communism pressing on its bosom, ejaculates: "Ah, what a constitution! Even the ardent religious throbbings of her heart!"

Almost immediately upon the taste of personal power and prosperity the New Deal courted, and in November 1933 established, "friendly" relations with the godless, intriguing widow, Russia.

Naturally, Mrs. America was neglected and spurned. The New Deal did not like Mrs. America's old-fashioned Constitution, tired of her Supreme Courting, criticized her economy, attempted to purge her advocate, the Congress, and even reviled and castigated the children who were loyal to her.

But, ah, Mrs. Russia, what a woman. And such intelligent and well-mannered children.

All these long 8 years, too many of Mrs. Russia's children, as the house guests of America have enjoyed the best places and the largest helpings at the table, while with the browbeating assistance of the New Deal, sitting at the head of the table, they forced their ideas and manners and heaped their abuses upon Mrs. America and her children. And now the latter must witness this nauseating embrace of the sweet, virtuous, religious Mrs. Russia publicly and before their very eyes.

No wonder the majority of America's children view with disgust, revulsion, and alarm this spectacle of what may be the presentation of their future stepmother.

Mr. Speaker, I make these observations because in a few days the House may be called upon to make another appropriation under the Lease Lend Act and to include Russia as a beneficiary. I do not recall that Russia has asked for a loan. I do recall that a few weeks ago she asked Britain for help and Britain answered that it depended on the United States. I do recall that within the 3 months she has been at war, the newspapers stated that she asked for weapons but did not want credit as she could pay cash.

However loose our fiscal policy, it should not degenerate into unsolicited gifts from the New Deal to Russia, nor should it be done under the delusion that Russia is our religious affinity, or that we can regenerate her with genuine religion through our rifles and ammunition. If we are going to help her, let us do it on the level to help the downfall of Hitlerism with full cognizance of our revulsion against communism. After all, let us remember that Russia, although rich, still owes us four hundred and fifty millions with interest and that the billions we are lease lending will have to be paid by the American people in sweat and taxes.

Why Japan May Break Loose From the Axis

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

ARTICLE BY VICENTE VILLAMIN, FILIPINO LAWYER AND WRITER, IN THE SEPTEMBER WORLD AFFAIRS MAGAZINE

Mr. CRAWFORD. Mr. Speaker, American-Japanese relations are still loaded with dynamite. They are in a state of flux. Representatives of the two Governments are attempting to stabilize them, but they have not yet reached a conclusion. In the meantime, Japanese military and patriotic spokesmen are becoming more and more warlike in their utterances against the United States.

While we want peaceful settlement, we must be prepared for the worst, and we are prepared for the worst. I wish to include in my remarks an illuminating and optimistic article on present Japanese-American relations by a Filipino lawyer and writer, Mr. Vicente Villamin, which appeared in the September issue of the World Affairs magazine and two-score newspapers throughout the United States:

[From World Affairs of September 1941]

WHY JAPAN MAY BREAK LOOSE FROM THE AXIS

(By Vicente Villamin)

In a radio speech to the world on Sunday, August 25, the British Prime Minister, Mr. Winston Churchill, revealed that there were going on conversations between America and Japan looking to the early settlement of war-provoking differences between them.

After castigating Japan, the Prime Minister declared: "Every effort will be made to secure a peaceful settlement. The United States are laboring with infinite patience to arrive at a fair and amicable settlement which will give Japan the utmost reassurance for her legitimate interests. We earnestly hope these negotiations will succeed. But this, I must say, that if these hopes should fail we shall, of course, range ourselves unhesitatingly at the side of the United States."

These words give rise to two basic questions: (a) What are Japan's "legitimate interests" which America would acknowledge as such, and (b) what could be the motives and justification of America to satisfy those interests?

I

Today Japan's paramount overseas policy is to expand southward. She asserts that she means to carry it out peacefully; that her purpose is economic rather than political; that her method is persuasion and not coercion; and that her military might would be brought into play only to keep other nations from frustrating that policy.

Such must be the essence of Japan's "legitimate interests" today. If they really are, and if they should receive the reassurance and recognition by America and Britain, as Mr. Churchill suggests, then the only question to be solved would be how faithfully and how legitimately Japan would execute her program of expansion.

The present Japanese advance southward is not fundamentally different in motive and objective from her occupation of Korea and Manchuria of yesteryear. Then Japan's thesis was "special paramount interests in East Asia by reason of geographical propinquity," but now the thesis is "legitimate interests" rendered indispensable, according to Japanese Empire builders, by the requirements of Japan's world aspirations. This time, however, the Japanese, learning a bitter lesson from their violent experience with China, are adopting, almost with a vengeance, the policy of friendship toward the countries they desire to have become their associates in what they call a life of coexistence and coprosperity.

Positive results of the new method of approach are encouraging to the Japanese. Where they have used brute force, as in China, they stand to face hard and weary years, but where they have employed amicable means, as in Thailand and Indochina, they can expect good and profitable times.

II

What could be the motives and justification of America to satisfy the legitimate interests of Japan?

There is only one answer. America's urgent interest today is to keep Japan from joining her allies, Germany and Italy, as a shooting belligerent. This interest is justified by America's expectation that she may have to engage in a formal shooting war with Japan's European allies and hence the patent unwisdom of fighting a two-ocean war before the projected two-ocean navy is in being.

So we come face to face with what must be Japan's supreme triumph in timing and maneuvering—that is, if America would acquiesce in her plan and procedure. As a reward for remaining at peace, a peace that would be Japan's very salvation, she is due to receive the Anglo-American recognition of her "legitimate interests" in her southward push provided she does not invade American and British rights and domain in the process. As these lines are being written, it is becoming increasingly clear that America is going to insist on its position—to which Japan agreed a year ago and again lately—of urging the maintenance of the international status quo in the west Pacific which rules against aggression and conquest of the peaceful countries in that region.

If the Netherlands East Indies, besides their faith in their power of resistance, desire to reinsure their immunity from Japan's exertion of her "legitimate interests" and all its possibilities, a temporary protectorate by America and/or Britain would seem to commend itself. This is merely an observation and not a suggestion.

III

At this point it is well to reiterate for emphasis the two imperatives of the situation from the American standpoint. They are (a) America's possible recognition of Japan's "legitimate interests," and (b) America's desire to avoid a two-ocean war.

It is relevant to set forth here the assets, respectively, of America and Japan in the present international situation, as they constitute the basis for bargaining in the negotiations which Mr. Churchill revealed as proceeding between the two countries.

The major assets of America are the following:

(1) A national-defense program that could be dangerous to Japan even now and would be overwhelming for Japan in the near future, particularly when America fights Japan only;

(2) China's recognition of American leadership, which may be decisive, on the question whether China should continue or not her resistance to Japan, which resistance is sapping Japan's strength and depleting her resources;

(3) The valuable friendship of America which includes free trading, free financial operations, and free activities for the 122,000 Japanese residents in continental United States, 150,000 in Hawaii, and 25,000 in the Philippines; and

(4) The virtual unanimity of the American people to go to war against Japan when the cause arises, a unanimity that is impressive when it is considered that it does not exist in the case of a possible war with Germany and Italy.

The leading assets of Japan are as follows:

(1) Her membership in the Axis alliance which gives her a nuisance value as an enemy in the Pacific at a time when America may be engaged in a war in the Atlantic;

(2) Her naval power, her national unity, and her geographical nearness both to the probable theater of conflict and the countries which she wants to bring into her orbit;

(3) Her resultant relative strengthening if and when Germany shall have destroyed or crippled the Russian military machine and organization, for Russia has always been a disturbing element in Japan's problem of international security; and

(4) Her concrete policy of expansion purporting to rest on a plan of economic collaboration, mutual advantage and friendly relations, a policy that is convincing certain countries in the Far East that Japan is more interested in their development than either America or Britain.

IV

America's assets outweigh in extent and effectiveness those credited to Japan. But unless America takes the heroic course of facing the enemy both in the Atlantic and the Pacific simultaneously her desire to avoid a two-ocean war would apparently require that a high price be paid to Japan. As already intimated, Japan's price is the recognition, express or implied, of her right and necessity to gravitate to the south without undue impediment. After that recognition Japan will take care of the rest, which may be surmised in this light of her past performance in similar instances.

It is illuminating to bring up at this point the reasons advanced by America in opposing the Japanese southward expansion. They are: (a) The assurance given by Japan in favor of the maintenance of the status quo in the west Pacific which encompasses the concepts of no aggression and no conquest of countries in that region, and (b) the necessity for America to keep open the sources of strategic and critical commodities, like tin, rubber, and quinine, which the Netherlands East Indies produce.

The Japanese do not believe that they are violating the assurance of the status quo when they go to a country with the consent of that country or when they conclude commercial agreements or other arrangements without duress. As to the control of strategic and critical materials, Japan could be expected, if she is thus minded, to follow the example of America in the case of shipments of oil from this country to Japan in times of stress under the export-control law. That would be just one of the concomitants of war, and it is usually forestalled by building up reserves or stock piles of the materials in times of peace.

V

The importance to America of keeping Japan from joining the Axis in active warfare may be wholly exaggerated. The combination of the forces of China, the British dominions and colonies in Asia and Australasia, the American military establishments in the Pacific, the Dutch, the Filipinos, the Javanese, and other potential associates is not for Japan to minimize, especially when she has not been able so far to put down the Chinese alone.

Instead therefore of exacting a price for her abstention from war Japan should pay a price for not being dragged into the war. When this idea becomes better fixed in the minds of the American people they will support an immediate declaration of war against Japan the moment she gives the slightest justification for it. So, bluntly stated, while America may today be pleased to see Japan refrain from becoming a shooting belligerent, Japan may tomorrow find it expedient to make a sacrifice to keep America from becoming a shooting enemy.

VI

America and Japan have always professed to want to be on good terms with each other and to improve their relations whenever they deteriorate. The stacking of assets against assets and the setting off of liabilities against liabilities are the inefficient and the wrong way of ameliorating their relations, for they subordinate or exclude the human elements which are so nebulous and yet so powerful. The right and the effective method is to base ideas and actions on common interests and common aspirations, and the alpha and the omega of all these is the perpetuation of peace in the Pacific and the achievement of human progress, which is only possible in a regime of amity and tranquility.

A few pertinent interrogations are timely at this juncture. Is Japan rationally sure of the friendship of Germany in view of the fate of comparable friendships? Is Japan reasonably certain that Germany may not in time displace her in Indochina and other countries which Japan may occupy with Ger-

many's consent or recommendation? Is the German friendship of any strategic value to Japan in the event of a war in the Pacific in the future?

The following question deserves to be underlined: What has Japan done for Germany for which the Germans should be sincerely grateful? It is revealing of the German realistic thinking to quote an unnamed German leader who said the other day in Berlin that the German people are not f-hting and dying for the benefit of the Japanese, and he had reference to the Japanese ambition to occupy French Indochina and the Netherlands East Indies, whose mother countries Germany has conquered.

In peacetime Japan has relatively little to expect from Germany in the way of trade, capital, and market. German principles clash with the Japanese tenet of coequality. The late German Kaiser used to talk ominously about the "yellow peril." The Nazis of today consider the Japanese as political and racial upstarts as well as potential industrial competitors. It is clear that the present German-Japanese alliance is strictly a temporary one of convenience for Germany and has no logic to support its continuity.

VII

The world is witnessing the birth of a new German Empire with far-flung colonies. Its coexistence with the British Empire is one of the big problems ahead. Japan is building a similar empire of her own, an empire which, when realized, will assemble over half of the world's population under her flag. The Japanese Empire is bound to collide with both the German and British Empires, and the Japanese might have an Anglo-German united front to face. Most assuredly Germany is not going to help Japan become her formidable competitor in world economics and a rival in world politics.

After the present war it would not be improbable or impossible for the Germans and the British to agree on a modus vivendi to blunt, if not to remove, points of possible conflict between them in different parts of the world. The British Empire will remain intact. In constructing her new empire Germany will draw her overseas territories chiefly from the French possessions and from the region in the Far East upon which Japan is counting to make up her own empire. It wouldn't be surprising to see Germany secretly wishing that some strong nation like the United States might crack down on Japan and pull her out from the grand march of empires. From that wish Britain and other countries would not themselves be entirely free.

America's interests and policies are different. She does not aspire to any sort of empire. Without any political ties she is establishing voluntary relationships based on mutual advantages with the countries in the Western Hemisphere. She has no plan to establish her sovereignty in Asia or to expand territorially in the west Pacific. She intends only to hold what she has now and release them as she desires.

From the standpoints of national policies and general disinterestedness Japan has in America the best friend among the nations. Between them are more points of harmony than conflict. Even in these wartimes their common interests are outstanding, although unfortunately they are being overlooked and neglected. One of these interests has to do with the significance of the German march to Asia and the Pacific via Siberia in the north and southeast Europe and India in the south.

VIII

The German thrust into Russia is in the direction of the Pacific. Would Japan welcome the German flag at Vladivostok and other points in eastern Siberia? If Japan was irked by the old German spearhead at Tsingtau on the north China coast 25 years ago when bombing planes were not the awesome monsters they are today, how would she feel about German air bases in eastern Siberia within a few hours of flying distance from Japan's highly inflammable towns and cities?

For the same reason but with much less acuteness because of greater distance those German bases would be a menace to America also. So, it is manifest that both America and Japan should be interested in preventing Germany from establishing herself in eastern Siberia. It should be frankly stated here that to America Japan would be the lesser of the two menaces if Japan decides to get to eastern Siberia first and stop the possible German occupation.

After the Russian campaign is won it is logical to expect the Germans to move into Iraq, Iran, Afghanistan, Baluchistan and then into India through to points beyond When that happens, would it not become clear, particularly to the Japanese, that the Germans would thus be reentering the Far East from which they were expelled by the Japanese themselves following the last World War? A German-Japanese reckoning would then be the next little matter the Germans would settle and settle to their satisfaction.

It is perfectly obvious that both the immediate and the long-range interests of Germany and Japan are headed for a collision. The opposite is true in the case of America and Japan. Every realist on both sides of the Pacific Ocean knows this, but the realists do not seem to be brave enough and effective enough to make the truth irresistible and compelling.

There is no need for any appeasement between America and Japan. All that is needed is for the two countries calmly to appraise their respective interests and be prepared to make some adjustments. In doing so they do not have to shoot each other for the sake of a third, far-distant power unless as peoples of blood and flesh they are driven by constant mutual verbal pin pricking to resort to the arbitrament of physical force.

America is the least selfish nation on earth. She is sure of herself, her good intentions, her moral stature, and her material competence. She can afford to be magnanimous and she means to be magnanimous. As nation to nation, on the basis of realism and reasonableness, America and Japan, if there is a will to achieve, could settle their major differences quickly and honorably.

Al Engel, His Camera and Notebook Serve the Nation

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

ARTICLE BY RAY TUCKER

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ray Tucker in This Week Magazine on the able, timely, and patriotic services rendered our country by a dynamic and fearless Congressman, the gentleman from Michigan, Mr. ENGEL. Mr. Tucker herein gives credit where credit is due.

[From This Week Magazine]

ONE-MAN SHOW

(By Ray Tucker)

One morning a year ago, an Appropriations Committee clerk hurried into the office of Representative ALBERT J. ENGEL, of Michigan. The messenger placed a copy of the original $466,000,000 Army cantonment construction bill on the Congressman's desk, and asked for his immediate approval. Mr. ENGEL sputtered a refusal, slipped into his coat and scurried across the Plaza to the House of Representatives as swiftly as his short, thick legs would propel his 225-pound body.

He discovered that only two poorly mimeographed copies of the bill were available for House Members. Not even the men on the Appropriations Committee (of which Mr. ENGEL is a conscientious member) who are charged with handling War Department funds could make head or tail of the improvised documents. The measure had not been approved at a full meeting of the Appropriations Committee itself.

This disorderly management of those millions of dollars troubled ENGEL. He thought of himself when a dollar was a precious thing and his mind raced back to a bitter Thanksgiving morning in Chicago more than 25 years ago. His rent was paid until the next Monday, but the newcomer to the city had no job and only $1.50 on him—a 50-cent piece in three different pockets so that he couldn't lose all his fortune at once.

He entered a hash house and sat down before a 10-cent breakfast of coffee and doughnuts. He had fished a cast-off newspaper out of a trash can to read the want ads. But his eye fell on a Thanksgiving Day cartoon. It depicted a forlorn kid sitting in a beanery, with clouds in one corner representing his dreams of a turkey dinner and all the trimmings at home.

"I was the kid in that cartoon," ENGEL recalled. "And I'd have beat it home if I'd had the fare. And here I was—not too many years later—being asked to okay almost half a billion dollars without knowing what it was all about. I said 'No.'"

Eventually, however, he agreed to prompt passage because of the need for housing the expanding Military Establishment. But he warned the War Department that he would hold the spenders strictly accountable for every penny which Congress had handed out in such fife-and-drum-corps tempo.

When, a few months later, he satisfied himself that actual cost would exceed estimates by $338,000,000, he decided the time had come to keep his promise. Then began one of the oddest and most quixotic investigations which Capitol Hill has ever witnessed.

Rarely has there been such a simple, swift, and economical inquiry into the expenditure of almost a billion dollars. It is estimated that ENGEL's findings and resultant reforms may save the Government millions of dollars.

EXTRAORDINARY EXPENDITURES

Yet his sole investigative equipment consisted of a battered 28-year-old postal-card-size camera, a notebook, a pocketful of pencils, and the inexpensive family automobile. His expense account shocked the General Accounting Office; it totaled $238.47 for a 13-day tour of cantonments in the East.

His one-man investigation was novel in another respect. He subordinated partisanship. He dealt in facts rather than personalities, political or military, and nobody has disputed his factual claims.

Most congressional investigators discharge their duties leisurely and luxuriously. But not Hurry-up ENGEL. This was his average schedule: Driving sometimes 18 hours at a stretch, he'd arrange to pull up at a camp between 6:30 and 7 in the morning. If he arrived during the night, he lodged at a nearby cabin or snoozed in his automobile. Once, in northern New York, he used his car for a wayside inn when it was 16 below zero. After a breakfast of orange juice, two slices of whole-wheat toast, and a cup of coffee (25 cents), he drove his car to the cantonment. He arrived there bright and early—so early that he usually met up with the morning shift of workers, who were streaming through the gates in their flivvers. As

a matter of fact, it would have been difficult to have told him from the carpenters and bricklayers, for he has a hobby of laying bricks before breakfast on his backyard wall. And he looks like a hewer and hauler.

Once inside, he drove around for 3 or 4 hours. He watched laborers at work, he examined construction jobs, he inspected salvage piles for possible wastage. He noted the grade and quality of lumber with the practiced eye of one who, as a youngster, had been a roustabout in a Michigan logging camp. He studied the soil for dryness or swampiness, the selection of sites for key structures, the arrangement of public utilities, the type and suitability of terrain. He drove everywhere except on the rifle range. If challenged he could produce a letter from the Adjutant General, and his congressional credentials.

When he had completed his first-hand investigation, he presented himself to the commanding officer of the post, identifying himself, and explaining the purpose of his visit.

Immediately there were luncheon and entertainment invitations galore for the perspiring, carelessly attired stranger whose bristly gray hair, driving energy, and rapid-fire sputtering once led the Detroit News to dub him "the La Follette of Michigan." But these offerings of hospitality were refused by the Congressman, who does not smoke, drink, dance, play cards, golf, or tennis, or indulge in chatter for the sake of moving his lips.

"No, Colonel," he invariably replied. "You're too busy and so am I. But you can do three things for me. First, tell your public-relations officer that I am not here.. Second, instruct your construction quartermaster, the contractors, and the engineers to give me the information I ask. I will want 5 hours of their time. Third, please have delivered a bottle of milk and two sandwiches, ham or cheese on rye preferred, at the construction quartermaster's office at noon. Please ask the people I want to see to bring their lunch there. I need every minute I can have with them."

HE SKIPPED NOTHING

Any disposition to humor or stall off the inquisitor vanished after he triggered his cross fire of questions. He covered every item involved in building an Army cantonment. He asked about labor wages and difficulties. About the rental charge and condition of equipment. The cost and quality and wastage of materials. The price, acreage, and former owners of the land. Camp utilities. The actual cost against estimates. Contractors' troubles. The reasons for delays. The cause of failure to keep within appropriations.

When he had obtained a stranglehold on these statistics he toured the site again, first with the construction officials, then alone, snapping photographs of whatever seemed to merit more intensive investigation.

Leaving the camp, he drove to the nearest town for dinner, which was almost as frugal as breakfast and lunch. He spent a few hours each evening in a poolroom or recreation center, but not to play. He questioned camp workers and soldiers. Thus he got an insight into the problems and attitudes of the men who had to build and occupy the cantonments. They furnished him numerous leads for inquiry at other places. Around 10 o'clock he climbed into his car and left for the next job. On one trip he covered 1,655 miles in 7 days, investigating five camps.

His series of speeches on cantonment conditions disclosed details which would never have been checked except by a post-war inquiry had it not been for his spot investigation. He revealed that 40 percent of the land at Camp Blanding, Fla., was below nearby lake levels. He estimated, and no one argued with him, that it cost $5,000,000 extra to excavate the mud and fill with solid earth and rock. He told how Army officers, over the protest of civilian contractors, refused to build the new center at Camp Meade, Md., on the World War site. Failure to utilize existing drainage systems, roads, and other facilities set Uncle Sam back $2,000,000.

At Camp Edwards, Mass., he found that a lobster fisherman was foreman of one carpenters' crew. His crew included a bond salesman, an insurance man, a meat cutter, a gas-station attendant. They were paid $1.17½ an hour; double for overtime. And there was plenty of overtime.

By a comparison of costs, the Congressman was convinced that the competitive-bid system was more economical and efficient than the lump-sum-fixed-fee arrangement. Barracks for 63 men at Camp Dix, N. J., which went to the lowest bidder, cost only $9,800, as against $17,364 for the same type at Camp Meade, which was built on the fixed-fee basis. The Engel inquiry also exploded the Army's insistence on an 11-percent allowance for engineering and overhead charges. The Congressman's "spot check" showed that expenditures for this purpose invariably ran as low as 5 percent.

In summarizing, ENGEL estimated that there had been a waste of $250,000,000 on the $804,000,000 construction program—and again nobody disputed him. The Michigan Member wasted no time before seeking reforms. It wasn't too late to provide a remedy.

His very first disclosures precipitated a shakeup in the Army's contract-award system and personnel. A civilian committee which had chosen contractors and fixed fees was supplanted by Maj. Gen. W. D. Connor, a brilliant officer, former West Point commandant, and, oddly, ENGEL's commanding officer in the A. E. F. Suspected opportunities for favoritism were eliminated. General Connor also promised stricter supervision of construction operations.

The Engel amendment requiring competitive bidding was beaten by 4 votes—only because Democratic leaders feared it might tie the Army's hands in a crisis demanding speed rather than saving of money. But they announced publicly that the War Department would use this method wherever practicable.

The Congressman's proposal to restrict the engineering and overhead item to 7 percent was adopted by the House. When the War Department persuaded the Senate to strike it from the bill, he exploded. He threatened to block the bill on the House floor, then abandoned a floor show-down in return for a major concession:

Brig. Gen. Brehon Somervell, in charge of Army construction, agreed in writing to restrict these costs to 7 percent through administrative action, and to make periodical reports to Congress on this item. This 4-percent saving will amount to many millions of dollars. Yet this leakage would have escaped detection if somebody had not taken the trouble to go looking for it—and recognized it when he saw it.

Like most public officials who handle public money as if it were their own, Mr. ENGEL comes rightly by his saving streak. His parents were thrifty, industrious Alsatians, who emigrated to this country in 1871, settling near Massillon, Ohio. But in 1899, when young AL was 13, the family moved to northern Michigan. It was pioneer country then, and the son pitched in to cut timber and farm the cleared land.

Finishing formal schooling when he completed the eighth grade at 14, the boy got work in a logging camp. He felled trees, swamped, fired a narrow-gage engine, operated a mill slab saw, drove the sawdust cart. His legs still bear the scars of an ax awkwardly swung. His head shows the marks of blows sustained in camp scraps. Older loggers always matched him against juvenile newcomers to the settlement.

Then he bought a bicycle, and next he knew he was pedaling furiously to Saginaw, a town 150 miles away. He wore his first set of store clothes, but he was minus underwear or any footwear except his logging boots. He couldn't afford them.

At Saginaw he landed a job on a threshing machine, moving from farm to farm with the harvest, sleeping in bunkhouses with hay for a mattress and a sack stuffed with bran for a pillow. His pay was $1 a day and board.

With $75 he had saved by fall, he struck out for the big city—Chicago. He wanted to go to school, but he had to have work to eat. He was turned down at 22 different places because he lacked recommendations. Then, while walking the street one morning, he saw the door of a store fly open. Out stumbled a youngster with an angry man in pursuit. The boy, AL concluded, was being fired. He walked in and got the job. For $5 a week he swept out and ran errands for the broken-down picture-framing shop.

After a few weeks friends took him around to the Central Y. M. C. A., where he enrolled in an elementary law course. He went on to better jobs, working in the auditing department of railroads and an ice company. Then, in 1907, he quit so he could study law at Northwestern University.

He supported himself by driving an express truck from 5:30 to 11:30 each night (30 cents an hour) and doing spare-time auditing for his old employers. He finished a 4-year course in 3 years, and with several fellow-graduates set himself up as voluntary defender for poor clients. He got no money but plenty of experience.

"After a case, we never asked each other, 'Did you get him off?'" he recalls with a grin. "Simply, 'How many years did he get?'"

The 1913-14 depression drove him back to Lake City, Mich. In 1916 he ran for county prosecuting attorney because he "needed a job." He made a house-to-house campaign of the district in a worn-out flivver. When it broke down before election day, he covered the rest of the territory on foot. The thrifty Dutch voters liked his perseverance and industry, and elected him.

In April 1917, 2 months after he took office, he resigned to attend officers' school at Fort Sheridan, Ill. He yearned to go overseas and he wangled a transfer to a casual company en route to Europe. From his first stop at Pershing's Chaumont headquarters he was shipped to Bordeaux, where he organized base 2 of the A. E. F. statistical section. He kept the "war diary" of all troop and supply movements in that area.

Returning home in December 1919 he fixed his sights on a seat in the State senate. In his ignorance he did not know that he should have consulted the organization bosses. But it would have made no difference, for he has never taken political orders.

BEATS THE MACHINE

His opponent opened his campaign with the conventional announcement that "at the earnest solicitation of my good friends I have agreed reluctantly to offer myself to the electorate." AL said: "I want it distinctly understood that nobody asked me to be a candidate. I am running because I want the job."

He was elected.

He was returned again in 1926, and was reelected in 1928 and 1930, despite his liberalism and aloofness from the party organization. Then, in 1934—after three tries—he was elected to Congress, defeating the machine in both the primary and the election.

Except for his amazing, one-man investigation, he has not been a headliner or a spectacular figure on Capitol Hill. He is a plodding, conscientious, hard-working fellow. He has old-fashioned notions, as he explains in describing the idea behind his curiosity about Army costs:

"When I got on the Appropriations Committee, and found myself handling billions of the taxpayers' money, I decided that it was up to me to see how it was spent, and that the people who elected me got their money's worth. That's all there is to it."

The Late Honorable Alanson B. Houghton

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

LETTER TO THE NEW YORK TIMES

Mr. WIGGLESWORTH. Mr. Speaker, as one who had the privilege of observing at close range the outstanding work done by the late Hon. Alanson B. Houghton as Ambassador to Germany after the last World War and of enjoying his friendship from that time to the time of his death, I am glad, under leave to extend my remarks in the RECORD, to include the following eloquent tribute to him by Oswald Garrison Villard, appearing in the New York Times of September 18:

THE LATE ALANSON HOUGHTON—TRIBUTE TO A FORMER AMBASSADOR WHO OCCUPIED DIFFICULT POSTS

TO THE EDITOR OF THE NEW YORK TIMES:

The death of Alanson B. Houghton, former Ambassador to Berlin and London, deprives us of a really great American and one of the wisest and most farsighted statesmen I have ever encountered in my four decades of dealing with public men here and abroad. During almost all of the time of our friendship he and I were politically in different camps. Hence I am not basing my favorable judgment of him, as most of us do, merely on the fact that we often agreed notably on foreign issues, but because I came to know him well and his work and to place the highest evaluation on his wisdom, political common sense, and his selflessness. I do not believe he ever approached a public question with the thought of how his stand might affect him personally. But there are several other aspects of his rich and extremely useful life which seem to me to warrant especial stressing at this time.

In the first place, he was a rich man who had added considerably to an inherited fortune by managing and developing a great industrial enterprise. Its owners lived in the community and managed it themselves and were far happier in the fact that they had the regard and respect of their workers than they were of their financial success and their extraordinary contribution to the development of the art of glass making.

Alanson Houghton was proud of never having had a strike in his plant and happy that an able son was equipped to take his place as the family representative and as the head of the company when it came time for him to retire. He thus was anything but the "wicked capitalist" of which we have heard so much. He was a warm-hearted and generous creative and constructive industrial leader of widest vision.

ENTRANCE INTO PUBLIC LIFE

Next, Mr. Houghton set a remarkable public example in that in 1919 he decided to enter public life by running for Congress in the district in which he lived. I am sure that he felt the time had come to repay in some measure in public service the rewards that our social and industrial system had conferred upon him. Most successful businessmen have been content to make their sole contribution to the communial political life in the form of checks, which too often have gone into the wrong coffers or the wrong hands. Mr. Houghton had a different idea, and he was on his way to an extremely influential Congressional career when in his second term in Congress he was appointed the first Ambassador to Berlin after the World War.

I suppose that most people on reading of his selection felt that here was just another rich man to whom the office had been given for political reason or because of the size of his contribution to party funds or because of his social ambition. I myself wondered a little at the selection, but came to believe that no more perfect appointment could possibly have been made.

I arrived at this opinion after going to Berlin in 1922 and 1923 and seeing for myself what a position he had won for himself, how profoundly he was influencing developments in Germany and what a natural-born diplomat he was; how he stood head and shoulders above the rest of the corps, even above the British Ambassador, Lord D'Abernon, whose many achievements I would not belittle. It was an extraordinarily difficult situation. Ellis Loring Dresel had carried on well as interim representative of the United States, but to be the first Ambassador to this chaotic, beaten country from the nation which had gained a coup de grâce was something very different.

I found the German Government actually consulting Mr. Houghton as to its most important moves and being guided by his opinion again and again to its great benefit. They admired him and deferred to him in a remarkable way.

HELPED IN DIFFICULT SITUATION

He rose so extraordinarily to the situation because he came to Germany thoroughly imbued with the American point of view and wholly without hatred or bitterness or condescension. He had done post-graduate work in Berlin and Goettingen after graduating from Harvard, so that he had a working knowledge of German and a genuine affection for the German people as apart from their misleaders.

He felt that he was there to help a mighty people in their dire distress just as far as the representative of a foreign people possibly could He was simple, approachable, ever friendly, unusually modest, and he was helped no end by a rare and delightful humor. He had rare tact, sympathy and understanding, and his business ability and congressional experience stood him in the best stead in passing on the dreadful economic and financial situation.

Of course, Mr. Houghton soon earned the cordial dislike of the French because of his opposition to their invasion of the Ruhr and the other substantial contributions to the raising up of Adolpf Hitler and the coming of the present war. But time has justified him in every respect.

It is the simple truth that no other American Ambassador to Berlin has ever achieved such success or won such tributes or expressions of heartfelt respect when he left. Had this country been wise it would have kept him there as long as he would stay. Yet Mr. Coolidge did a just and proper thing by promoting him to the Court of St. James. In 3 years he had well earned that distinction.

In this time of stress and strain, when the state of the Republic is darker than ever before, it is most comforting to think that the crisis of 1922 produced in Mr Houghton just the man we needed for the Berlin task. There is still splendid material in all groups available for the finest type of public service. The difficulty is to get them in and to keep them in—and to keep many others out.

OSWALD GARRISON VILLARD.

Thomaston, Conn., September 17, 1941.

Strikes in Defense

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. BRADLEY of Michigan. Mr. Speaker, I have been very much interested this afternoon in several speeches made by Members commenting favorably on the very enoyable demonstration and exhibition given Members of Congress last Thursday at Fort Belvoir. I join with my colleagues in expressing my sincere appreciation to the Secretary of War for that splendid and informative trip.

However, Mr. Speaker, there were at least two very disturbing elements on that memorable occasion. First of all, I was astounded at the price tag placed on much of that equipment that was so proudly displayed before us. I fully appreciate that in times of emergency one cannot quibble over the price tag placed on a needed piece of equipment. But on the other hand it does seem to me that a little sound judgment could save you and I, and the rest of our taxpayers, untold millions of dollars. I have heard Army men say that the Army has a hard enough time getting any suitable appropriations in peacetime and consequently when a war comes along they have to make up for lost time and the price tags placed on that equipment at Fort Belvoir bear out that statement.

Another thing I wondered about was just how much of that modern equipment we had on hand. I was not kept wondering very long, because the answer stood out right like a sore thumb within a very few hours when the sham battles were staged in the afternoon. Here you had a picture, Mr. Speaker, of a demonstration being staged, under the direction of the Secretary of War, for the Vice President of the United States, the Under Secretary of War, hundreds of Members of the House and Senate, and scores of newspapermen, as well as a score or more of uniformed military observers from foreign countries. And yet there was not enough equipment at Fort Belvoir—within 20 miles of the Nation's Capital—to stage that demonstration. There were a score or more of light tanks engaged in the sham battle, but there were also what seemed to be a number of automobiles or other equipment on which had been painted a false side to simulate additional tanks.

Mr. Speaker, you know the answer to this shortage just as well as I do. The bottleneck in American defense is in this continued wave after wave of strikes in defense industries, about which this administration does absolutely nothing—and Congress less.

A fearless editor of a local newspaper, back in my State, has hit the nail on the head in the following editorial which I

include in the RECORD at this point. He asks a real question when he asks, "How Do Strikes Strike You—Taxpayer?"

[From the Alma Record and Alma Journal]

HOW DO STRIKES STRIKE YOU—TAXPAYER?

We can't read a newspaper or turn on the radio without seeing or hearing something about a strike, something that is interfering with defense programs, and yet the Government officials allow these strikes to go on, and in many cases secretly encourage them while at the same time they are calling for more billions of dollars from the pockets of the people for supposed defense purposes.

Now there is a hue and cry in Congress, promoted by those in authority, to raise more billions to send to Europe.

Only a few months ago a law was passed which was known as the lease-lend bill and that provided for taking $7,000,000,000 out of the pockets of the American people to raise money for John Bull, Tom, Dick, and Harry, and other bulls. Now they are demanding of the people six billion more to give or lend to someone outside of our country, and American people have to pay.

If Congress would put a stop to these strikes and make the strikers work on defense programs the same as they make the soldiers fight for defense they would be doing something for the people besides robbing them of their earnings and savings.

If the labor leaders are permitted to strike and hold up defense programs, I see no reason why the taxpayers would not be justified in striking and refusing to pay any more taxes until the other strikers get down to business and work for the good of the country instead of for their own selfish interests. It is the people's money that is being wasted and strikers are being paid out of unemployment taxes on business while they sit on the seat of their pants and howl for increased pay or less production.

Here is an illustration of the extent of strikes which should awake the American people up and make them strike conscious to the extent of refusing to pay taxes to finance this kind of nonsense and rank injustice. Read it over for yourself and do your own deciding as to how strikes strike you and how long you are going to stand for that kind of right down dishonest management of our affairs and the waste of our money.

According to the Bureau of Labor Statistics, man-days lost by strikes in 1941 have increased 500 percent over 1940. During the first 7 months of 1940, 3,091,000 man-days were lost. In the similar 1941 period, 15,750,000 man-days were lost.

The number of strikes called in 1941 increased to 2,505 from the 1940 figure of 1,403.

A month-by-month comparison of numbers of strikes in 1941 and 1940 follows:

Month	1941	1940
January	220	128
February	240	172
March	230	178
April	400	223
May	500	239
June	385	214
July	430	244
Total	2,505	1,403

A comparison of man-days lost month by month follows:

Month	1941	1940
January	625,000	247,000
February	1,000,000	290,000
March	1,400,000	387,000
April	7,800,000	442,000
May	2,250,000	656,000
June	2,375,000	484,000
July	1,300,000	585,000
Total	15,750,000	3,091,000

Now, folks, let us break this record down and see just what it means to us in terms which we can understand, and then let us draw our own conclusions as to the justice and fairness of this sort of management.

Three hundred working days per year are considered as the average working year in all industry, taking out Sundays and holidays. Now, let us divide 15,750,000 by 300 and the result is 52,500 working years for one man that have been wasted in 7 months, and during all that time we have been yelling at the top of our voices for greater and faster production for defense in order that we may send enough to England and Russia to save our democracy, which is in greater danger from our own nonsense than from anything that is happening in Europe.

If we make another analysis of this situation and take a look at the problem from another angle, it would take 52,500 men working one whole year to make up that time lost by these strikes and it really does not take much hard thinking to estimate what could be accomplished in 1 year by 52,500 men, working steadily every working day in honest to God fashion.

Had there been no strikes, and had the lost years been put in at honest labor, there would be no need for us to be yelling for greater speed for defense production, and the material we need would have been produced and would be already in use. The newspapers would not be urging greater haste, and the radio announcers would silence most of their senseless chatter about speed.

Just everyday horse sense tells us that the man who sits down and refuses to work is not producing anything, and, further, that he is not letting anyone else produce anything for defense or for any other purpose. Now the government management that stands for that sort of thing has some loose headgear somewhere that is failing to function in this time when the country is in great danger and needs the loyal service of every good American citizen.

The danger to the country grows steadily for one reason only, and that reason is the fact that millions of production days are lost because strikes go on and men loaf at public expense instead of producing for defense.

If our public servants in Washington are not big enough and do not possess the common sense and courage to put a stop to this outrage, then it is time for the people to speak right out in meeting to protect themselves.

America's Hope Lies in a Simple Faith in the Living God

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

ADDRESS BY HON. CARL T. CURTIS, OF NEBRASKA

Mr. CURTIS. Mr. Speaker, on October 5, 1941, the eighteenth annual Nebraska State Sunday at Valley Forge was observed. This service was held at 3 o'clock in the afternoon at the Washington Memorial Chapel at Valley Forge. It was sponsored by the National Society of Colonial Dames of America in Nebraska, and the National Society, Daughters of the American Revolution in the State of Nebraska.

Nebraskans are greatly interested in this Memorial Chapel. The Nebraska State bell for the Washington Memorial National Carillon was the gift of the Daughters of the American Revolution in Nebraska. The Nebraska State panel in the roof of the Republic in the Chapel was a gift of the National Society of Colonial Dames of America in the State of Nebraska, and the Nebraska State Flag used in the service was given by Mrs. B. G. Miller, of Crete, Nebraska, the State director for Nebraska for the Children of the American Revolution.

I wish to extend my remarks by including the address delivered by me on the occasion above named. The address follows:

It is with a sense of awe and reverence I speak here at Valley Forge on Nebraska Day. This spot is so rich in American history and tradition that any American worthy of the name can feel his heart throb with a greater love for his country.

I am glad to appear as a Nebraskan on this Nebraska Day at this historic shrine. Nebraskans yield to no one in their love for their country and their willingness to sacrifice to the end that those honored dead whose blood flowed on this spot shall not have died in vain. I am happy that Nebraskans have contributed to the building of this beautiful chapel.

The present time is much like the period described by the poet in the long ago who said:

"We are living, we are dwelling,
In a grand and awful time;
In an age on ages telling,
To be living is sublime."

Valley Forge should have a new significance in the year of 1941. I say that because I believe that the qualities of character that were displayed by the men at Valley Forge are the qualities of character that we need so much today, namely, self-denial, sacrifice, toil, and faith. No picture of Valley Forge is complete without that great, God-fearing, wise, persistent, and courageous leader, Gen. George Washington. When we think of the sacrifices that had to be made, the obstacles that had to be overcome, and the impossible tasks that had to be performed we say to ourselves, How could Washington have done it? There is but one answer to that, and that answer is portrayed in the painting of Washington at prayer at Valley Forge. America i a great nation today because the Father of our Country was a general who was brave enough to pray.

So today we meet in a chapel erected to God, and in memory of the Father of our Country, to pray to the God of the Father of our Country.

Need I take time to argue that in these tragic days we do need divine guidance and help? Grover Cleveland once declared, "Above all I know there is a Supreme Being who rules the affairs of men and whose goodness and mercy have always followed the American people. I know that he will not turn from us now, if we humbly and reverently seek his powerful aid."

As one who loves to pursue the pages of American history, I like to visit our national shrines. I enjoy coming to Valley Forge. It does something for me. I enjoy visiting Mount Vernon, the home of George Washington. When I visit Mount Vernon and take

the path that leads down to the tomb of General Washington, and gaze upon that stone sarcophagus which holds his earthly remains, I cannot feel that George Washington is there. I prefer to believe that General Washington has taken his place in the realm of eternity and that he looks down upon his United States in our day and age. As I think of him in that great beyond looking down and observing our progress as a nation, our growth and development, our mistakes and our successes, our decisions and our choices, it would seem to me that he says, "Do not waste your time in eulogizing me—follow my advice."

Two of the things that stand out in the life of George Washington were his habits of reading the Holy Bible, and his faith in God as provider of all good things. It would be difficult for us to speculate upon what kind of a country we would have today if it were not for the life of George Washington. Likewise, it is equally hard to speculate on what the life of George Washington would have been if he had not sought the guidance and help of the divine Scriptures every morning and every evening throughout his life.

Mr. Will H. Houghton, the president of the Moody Bible Institute, in his book entitled "Let's Go Back to the Bible" says, "Days of darkness have been days of Bible ignorance." It can likewise be said that order was brought out of chaos during one of the darkest periods of our history by a man who had as his daily companion the Holy Scriptures.

There are many things that can be said about the faith of George Washington. We love to think of his habits of church attendance, his prayers, his support of the churches of his time, and other acts performed by him. But there is a thought expressed in his first inaugural address which shows how great was his faith. He then said: "It would be peculiarly improper to omit in this first official act my fervent supplications to that almighty being who rules over the universe, who presides in the councils of nations, and whose providential aids can supply every human defect."

I ask you to notice, my friends, that George Washington believed in a God who rules over the universe, who presides at the council of nations, and whose providenial aids can supply every human defect. That is but another way of saying what Isaiah of old said, "If ye be willing and obedient, ye shall eat the good of the land."

King Solomon said it in this way: "Blessed is everyone that feareth the Lord, and walketh in His ways, for thou shall eat the labors of thine hands; happy thou shalt be, and it shall be well with thee."

And Job said: "If they obey and serve Him, they shall spend their days in prosperity and their years in pleasure."

These are sad and troubled days. Confusion and heartache seem to be the order of our day. In spite of all our wealth, our natural resources, and our manpower, we are faced with unhappiness, disappointment, unemployment, business failures, suicides, and all manner of difficulty.

The people of America have floundered around over a broad field searching for a solution to the problems of life. We have been eager to grasp the spirit of the age, when we should have held fast to the spirit of the ages. The problems of food, shelter, and of getting along with our fellow men are as great today as they were during the days of primitive man.

The trend of our Government over the last 7 or 8 years has been to the effect that the Government would solve all of our problems. This false and misleading philosophy that the "Government will take care of you" has not only been proclaimed, but the resources of our great Nation have been dissipated in proving the fallacy of such ideas. In our quest after a Government-directed and man-made prosperity, we have lost sight of the admonition, "Seek ye first the Kingdom of God and all its righteousness, and all these things shall be added unto you." Things are but the essence of prosperity.

A misguided philosophy of government has turned the hopes and imagination of 130,000,000 of people away from the City of God and directed it upon our Capital City. A people who at one time were consoled with the words of the old hymn, "God will take care of you, be not dismayed whate'er betide," are now taught, "Be not dismayed, whate'er betide—the Government will take care of you." An eminent divine in the city of Washington has declared, "We have supplanted the word government instead of God in the twenty-third Psalm. We have been taught, "The Government is my shepherd, I shall not want."

In other words, we have been rendering unto Caesar the things that are God's. Today our Nation is engaged in the great task of building a defense. I believe that America will come through in that job. When that defense job is over our domestic problems will still be with us and it would be foolhardy on our part if we did not heed the advice of those who say that after the present war emergency is over there will be another and a greater period of depression. It is well that we give some thought now as to how we will approach that problem and what our attitude will be.

It is a matter of history that America has never come out of any depression until a spiritual awakening had taken place. A noted example of this is the revival that followed the panic of 1857. At that time the large financial centers crashed; public confidence was prostrate; industry stood still; ruin confronted the leaders of business; and, desperate poverty was the lot of countless wage earners. Amidst such conditions a laymen's revival started in many of our great cities and swept over our country. Newspapers at that time carried accounts of men in all walks of life—porters, hand cartmen, policemen, tradesmen, mechanics, ministers, business and professional men of all ages—gathering at places of worship. Those men cried out to God, "Save my soul and restore my credit," or "Save my soul and get me a job." Their common conscience told them why they had to pray and their common predicament dictated what to pray for.

America came out of that depression and came out with a stronger citizenry. Commenting on it, the Reverend A. J. Patterson, of Portsmouth, N. H., said: "A religious awakening always follows the track of a business depression; this is convincing evidence of the reality of religion."

We should ever be mindful—

"That only men can make
A nation great and strong,
Men who for truth and honor's sake,
Stand fast and suffer long."

A great truth was uttered by William McKinley when he said, "Our faith teaches us that there is no safer reliance than the God of our Fathers, who has so singularly favored the American people in every national trial, and who will not forsake us now as long as we obey His commandments and walk humbly in His footsteps."

Modern statesmen need to take the view as expressed by Dr. Frank W. Gunsaulaus who said, "Statesmanship is seeing where Almighty God is going and then getting things out of His way."

Amidst strife, war, poverty, unemployment, distress, and failure, when a period of dark ages seem but around the corner, America's hope lies in a simple faith in the living God.

"If we would build,
And build to stay,
We must find God again,
And go His way."

Understudy for Russia

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

RADIO ADDRESS BY JOHN T. FLYNN

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by John T. Flynn, chairman of the New York chapter of the America First Committee, September 27:

In these sad days wherever we turn we are met with that terrible word "war" and with the thoughts of war. Everywhere people argue whether we should stay out of the war or go into the war all the way or go in just a little bit. Does it not seem an intelligent thing, therefore, to have a very clear idea of the war we are talking about going into?

To know what this war is you have only to look at those dread scenes in Russia as the engines of death roll over her fields, her cities, her people.

Our image of war, unfortunately, is still a little feeble because it is still formed upon the conceptions of the wars we have known up to now. We have thought of war as barbarous, cruel, savage. But never anything so barbarous or cruel or savage as this war. In our youth we were shocked at the story of the bloody angle at Gettysburg or the mowing down of men like wild rabbits at Chancellorsville. And later we shuddered at the vast slaughter at Verdun in the Great War. But all these were as nothing compared with the carnage in Russia as Stalin and Hitler hurl human beings at each other as if they were only dry bones.

Our whole Revolutionary War was fought with only 4,000 Americans killed. The bloody battle of Gettysburg saw 3,500 Federals and 5,500 Confederates killed. What a safe place Gettysburg was compared with the fields around Leningrad or Kiev or Smolensk. The Germans say they have killed, wounded, or captured 5,000,000 Russians. The British concede it is 3,000,000. In the last war it took 4 years of killing to slaughter 1,500,000 Russians. In this war the Germans have done that in just 3 months. Verdun was called the bloodiest battle in history. A million men were killed in the armies of five nations in 4 months. In Russia three times as many have been blown to bits in the German and Russian Armies in just 3 months. All this does not include the wounded or, what is perhaps more terrible, that endless melancholy line of millions of prisoners which flows back of the lines of both armies to starve and rot with disease in the prison camps of Nazi Germany and Communist Russia. What the losses will be if this war rages for another year or another 5 years staggers the imagination.

When, therefore, some politician or some delicate-fingered preacher or professor, still flushed with a bounteous meal and safe behind his gray hairs, tells you that we should declare war on Germany, the war they are talking about is this far spreading orgy of blood and fire and murder which you see rolling over the doomed prairies of Russia. When the President of the United States or his warlike Secretary of the Navy seeks this week by one device and next week by another to inch you ever closer and closer and finally into war—this dread inferno of slaughter is the war they are trying to inch you into.

Now, let me tell you why I have called your attention to these grim facts. There can be no doubt that Russia is reeling toward defeat. From London and Washington come ominous warnings that this will happen soon. Now, if this is true then it is only a question of time when the Russian Armies will be out of the war. And when that happens there will be no enemy on the European Continent facing Hitler on the battlefield.

When France and England entered this war they did not plan on doing much fighting. France behind her Maginot Line and Britain with her Navy thought they could station themselves at all the gateways of the seven seas, bottle Germany up and starve her population into submission. But it did not work out that way. Somebody has had to fight Hitler. At this moment whatever fighting is being done against Hitler is being done by the Russians and the Russians alone. English fliers drop some bombs on the Continent, but chiefly on French and Belgian towns. England's Army keeps at home in England. When I say nobody is fighting Hitler but Russia I mean really fighting him with planes and tanks and guns and armies. And when Russia is knocked out nobody will be fighting him. Yet if Hitler is to be defeated somebody must fight him. The question is, Who will it be? Clearly, England has no intention of invading the Continent and attacking Hitler. She does not do it now while Russia has five and six million men in the field against him on his other front. She will certainly not do it when Russia is knocked out. And so I ask, "Who is to do it?"

On September 3, 1939, England declared war against Germany because of her attack on Poland. Britain then announced that she would fight Hitler and Nazism until both were destroyed. Here in America we were told Britain was fighting our battle. But now let us see whose battle has been fought and who has been doing the fighting.

This war has been a series of gigantic battles. First was the Battle of Poland. England promised aid to the Poles. All they got was a high commission. The Poles fought that battle. They met the Germans with an army of a million men. They were defeated in a few weeks. They lost their whole army and their liberties. Next came the Battle of France. France had 2,000,000 men, Belgium about 500,000. England sent only 350,000. France lost her whole army. So did Belgium. Britain's losses were negligible. The Battle of France was in fact fought by the French. They were defeated in a few weeks and lost their liberties. Next came the Battle of Greece and Yugoslavia. That battle was fought by the Greeks and the Yugoslavs. Britain sent a handful of men and suffered trivial casualties. Greece and Yugoslavia lost that battle, lost their entire armies and lost their liberties. Then came the Battle of Russia. Again Britain promised aid to the Russians. Again she sent Russia a high commission. The Battle of Russia is being fought by the Russians alone.

Thus the story goes. The Battle of Poland was fought by the Poles. The Battle of France was fought by the French. The Battle of Greece was fought by the Greeks and Serbs. The Battle of Russia is being fought by the Russians. And now when the Russians fold up and the next battlefield is ready, who will do the fighting? What nation with millions of men is being groomed now as the understudy for Russia, to step out upon the stage and play out the bloody rôle of crushing Hitler? Who has been elected by England to fight this next battle? For Hitler will never be defeated until somebody fights a battle with him who can bring more men and more tanks and more planes and more guns than Russia has brought into the battle. Who has been chosen by England for that job? Who, I ask you, is next on England's list? Of course you know the answer. America has been selected, is being prepared and propagandized to fight, not her own battle, for she is not mixed up in this, but England's battle. Yet we are such dupes that we allow British statesmen and propagandists to tell us that she is fighting ours.

That is why I have described to you the vast proportions of this war, so that as you consider whether you are to go into it or not you will know precisely what size war it is and what is the size of the job you are tackling. If we are to fight Germany let us understand, like sensible people, just what we must get together for that enterprise. Assistant Secretary of War McCloy told the Michigan Bar Association this week that Germany has 10,000,000 men under arms. She has more guns, more tanks, more planes than all the armies in the World War put together. Now, it is not a question whether we are afraid of Germany. It is a question of going about the job intelligently. If we fight the Germans, we will have to have as many men in our Army and as many planes, guns, and tanks as they have. Because we will have to go 3,500 miles away from our bases to fight them on their own soil and behind their own fortifications. When you start that job and read about the monstrous battles on the fields of France or Germany or Russia; when you hear of battles in which a million men are killed, the men you will be reading about will be not Russians or Poles, but your own American boys. When you hear of those terrible lines of prisoners, broken, hopeless, many wounded, marching by the millions behind the enemy lines into their prison camps of starvation and disease and cruelty, they will be your boys who will live out in those dread camps many years of agonized frustration. And so the question you have to ask yourself is a plain, common-sense one. Are you aware of any stake you have in this war; is any material or spiritual thing of ours here in America involved to such a point that you are willing to raise these vast armies, send them throughout the world, and cripple your whole economic and social system for years in the effort? And I beg you to keep this in mind: Great as will be the cost in men, in money, in debt and taxes, there is a far greater cost you must reckon on. You cannot turn this whole society of ours upside down, deliver it over to the deeds and the business of war, pile up the vast debts of war, unloose the violent emotions of war, without delivering a death blow to your economic system and your democratic life. If we go to war with Germany, to be sure we can win the war, though it may take many years. We can win against Germany at a frightful cost. But we cannot win against war itself. Germany cannot destroy us. But modern war, which in turn has destroyed victors and vanquished throughout the world, will destroy us; and we who pretend we are going to war to save the freedoms of France and Britain and Greece and Russia, will end by losing our own.

I warn you, my fellow Americans, that there is at work in this Nation a powerful engine of propaganda directed from Washington to get you all the way into this war. These men do not ask you to plunge headlong into war, because they know you would refuse. But they inch you along one small step at a time. They ask you to sell arms today. Then they ask you to give arms. Then they ask you to occupy Greenland and next it is Iceland. When that is done you have an American armed force actually over in the European hemisphere. You are against convoys, so they start what they call an Atlantic patrol. And having gotten away with that they now have started convoys. Now they want to arm American merchant ships and send them boldly into the war zones hoping some will be sunk and thus inflame the minds of Americans to actual war.

Your course is clear. Your Senator, your Congressman is your servant. Next year your Congressman must come to you for your votes. Write to him. Tell him you want no more of this war-making business. By whatever name they call it—convoys, arming merchant ships, sending money to Communist Russia, repealing the Neutrality Act—all these are only schemes to get us to the precipice and finally into war. Get your friends to write. Keep at them. Remember your Congressmen watch those letters. Nobody can stop this war but you.

Liquidation of Small Business Will Create a Few Gigantic Monopolies to Control American Economy

---

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

EDITORIAL FROM THE MANKATO (MINN.) FREE PRESS

Mr. AUGUST H. ANDRESEN. Mr. Speaker, many things are being done in the name of national defense that are far afield from our effort to make our country strong on land, sea, and in the air. I call your attention again to the general liquidation of small business in the United States in the name of national defense.

Small business is not the recipient of defense contracts, and the strictly enforced priority system is denying these little fellows the privilege of securing essential materials to continue in business. Fifty-six large manufacturers are doing 75 percent of defense production.

Liquidation of small business may be a conspiracy on the part of those who seek to remake American economy. When the small businessman is out of the way, we will find a few gigantic monopolies in absolute control. These, in turn, will be controlled by the Government through threat of persecution and prosecution, or bodily taken over to fulfill the un-American scheme of a total socialized economy for the United States. It is time for Congress to act at once to save our great American middle class of small business before it is too late.

Mr. Speaker, many great Americans are giving this important problem serious thought. Mr. Clifford H. Russell, the managing editor of the Mankato Free Press of Mankato, Minn., is one of this group. I commended Mr. Russell for his constructive work in behalf of the small businessman, and I am proud to include as a part of my remarks an editorial written by him which was published in the Mankato Free Press on October 1, 1941. The editorial follows:

TIME TO ACT NOW

New appeals are being voiced, new efforts are being made to arouse greater interest

in Congress over the plight of small business due to the defense program.

Defense demands must, of necessity, get priority over materials for nondefense goods.

It would seem, however, that any system of allocating priorities can and must be administered with some realization and appreciation of the long range effects it may have on the Nation's economic system.

As it is now the small industry, the small contractor, the little fellow in all fields, is denied materials with which to carry on normal nondefense activities, and at the same time he is getting no share of the billions that are being expended for the Nation's vast defense program.

He is being ground between two millstones and the question of his ability to survive has become a matter of serious doubt.

It is a critical situation for the Nation as a whole as well as for small business.

It is the smaller tributaries, the creeks and rivulets and springs in the virgin backcountry that feed our great rivers. Cut off these smaller streams, dry them up, tile them out, and your mighty streams for river traffic in time become nothing more than a succession of stagnant pools.

It is the small roots, the little, fibrous tendrils that supply the food, strength, and sustenance to support our mighty oaks. Cut off these little feeders and the major taproots are useless—in time your great oaks will wither and die.

Small business, the little fellows back in the hinterland, are the creeks and rivulets and feeder roots of this Nation's economic system. Dry them up, cut them off, and your great streams of commerce will shrink and stagnate, your mighty oaks of industry will die.

That's the very danger that our defense program presents, if it continues along present lines.

For more than a quarter century past there has been much talk and some action at successive sessions of Congress and in successive administrations about curbing and regulating monopoly. Yet the defense program as it is now being administered is doing more to foster, strengthen, and give unlimited power to monopoly than anything that has happened since Theodore Roosevelt inaugurated his famous "trust busting" campaign away back at the beginning of the century.

The big industries are getting the lion's share, and then some, of defense contracts, and they are refusing to sublet them.

Also they are getting priority orders for essential materials. They control contracts and as a result of those contracts they control the materials necessary to carry them out. The little fellow gets neither.

The paralysis that such a situation creates spreads from manufacturers to dealers, from factories down to the stores and shops of Main Street. The little independent is rapidly approaching a situation where his sales force must be cut; where he may even be compelled to close his doors. The larger retailers, the chains, and strongly financed groups are able to buy more heavily, are able to get more goods, will be able to weather the crisis without serious consequences.

All through the economic system the "little fellow" is at grips with forces too vast and too mighty for him to face or control. He finds the billions of his own Government arrayed against him.

It is a serious and a difficult situation, but it is not one that is impossible of solution.

The administration has recognized the crisis that threatens small business by setting up a special department and naming Floyd Odlum, of O. P. M., to head it. That is only a gesture, however. To merely study the situation is not enough. There must be action, and that action must come from Congress.

Wherever possible defense contracts must be sublet to give the smaller industries a chance to continue operating. Priorities can be enforced wisely, with due consideration of the long-range effects on small business, or they can be enforced blindly and arbitrarily.

It is the responsibility of Congress to set up some reasonable safeguards that insure the preservation of the smaller independent business units in our economic system. Otherwise the close of this defense effort to save our democracy may find us delivered into the hands of a totalitarian and monopolistic economic dictatorship as absolute and as objectionable as the foreign dictatorship against which we are arming.

The crisis is urgent, and the time for such action is now.

Russia and Religion

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 2, 1941

Mr. THOMAS of New Jersey. Mr. Speaker, a few days ago the President gave out a statement in which he very clearly implied that the situation with respect to freedom of religious worship in Russia is just what it is in the United States. Having outraged the sensibilities of the American people by that statement, the President then tried to make a strategic retreat by issuing a second statement in which he announced that he had instructed his emissary in Russia to enter into discussions with Joe Stalin over the matter of introducing freedom of religious worship for Stalin's slaves.

If the President knew, when he gave out his first statement on the subject, that the Soviet Constitution did not reflect the actual state of affairs in Russia, why did he not say so frankly instead of comparing Russia and the United States? If he knew that there was no freedom of religious worship in the Soviet Union, and that the situation was one which he ought to have his representative take up with Stalin, why did he insult the intelligence of the American people by calling their attention to a mere paper fraud—the Soviet constitution?

Even though red Stalin yesterday gave religious freedom to a handful of old Russians, as a bait for American money and arms, there is still no good reason why our Government should be a party to the belief that the Russian bear has gotten religion. If our Government should decide to aid Russia, then I would much rather see aid given on the more forthright basis that Communist Russia is but the lesser of two evils.

The President's recent statement is the kind of administrative juggling which has shaken public confidence to its roots at a time when it is so greatly needed. It is the kind of blindman's buff statesmanship which has forced the American people to be so skeptical of the motives of our Government now when we should be more united than ever before in our history. New Deal political chicanery, even under the guise of foreign affairs is easily discernible. Likewise, the American people do not favor the international crisis being made the guinea pig for New Deal socialization. Still, further, the American people do not care to use aid to Russia as an excuse for a flirtation on the part of our Government and its officials with the revolutionary theories of the Comintern. Nor do we care to make a three-card monte game out of an unlimited national emergency.

Mr. Speaker, in order to more clearly portray the absurdity of even thinking that the Russian Government has or will permit the freedom of religious worship, I include in the RECORD a letter which the gentleman from Texas [Mr. DIES] wrote to the President on the subject of freedom of religious worship in Russia:

CONGRESS OF THE UNITED STATES
HOUSE OF REPRESENTATIVES
SPECIAL COMMITTEE ON
UN-AMERICAN ACTIVITIES,
WASHINGTON, D. C., *October 1, 1941.*

President FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: It has come to my attention that a statement made by you at your press conference yesterday is being used by the publications of the Communist Party and some others, in a manner which is calculated to obscure the truth at a time when the truth concerning communism is of the utmost importance.

For example, the Daily Worker, mouthpiece of the Communist Party, declares in bold front-page headlines that Roosevelt Praises Freedom of Religion in U. S. S. R.

The fact that Stalin and Hitler are now locked in a deadly struggle, taken in conjunction with the fact that the American people are so wholehearted in their detestation of Hitler and all his works, creates a situation in which Stalin and the American Communist Party are conducting one of the most insidious propaganda campaigns ever turned loose upon the American people. Of course, the strategy of the Communists is to do all within their power to convert the anti-Nazi feelings of the American people into pro-Soviet sentiments. It is against the possible success of this strategy that we must do all within our power to make the truth prevail.

As chairman of the Special Committee on un-American Activities, I have sought for more than 3 years to sift the truth from the propagandistic falsehoods of the Nazis and the Communists alike. I have done my best to apprise the Congress and the American people of the facts which our investigations have made clear. I, for one, propose to continue at whatever cost to follow the course of giving the facts to the American people, and I intend, Mr. President, to seize upon every opportunity to let the American people know that the similarities between Stalin and Hitler are far more striking than any of their differences.

I note, Mr. President, that you called the attention of the press to Article 124 of the Soviet Constitution, the article which allegedly guarantees freedom of religious worship to the citizens of the U. S. S. R. Far be it from me, Mr. President, to assign any motive or purpose to your citation of this article from the Soviet Constitution. My sole concern is to point out that Stalin's record makes a mockery of his constitution.

In the name of tens of thousands of voiceless Christian martyrs who have been murdered by the Soviets, I rise to protest against

any effort in any quarter to dress the Soviet wolf in the sheep's clothing of the four freedoms.

In our investigations, we have learned that the very essence of Communist strategy is double-dealing. Two examples will, perhaps, make clear what I mean: In the period of the People's Front, from 1935 to 1939, the Soviet regime conducted its foreign policy around a world-wide anti-Nazi agitation. It succeeded in hoodwinking thousands of well-meaning American liberals into joining its anti-Nazi transmission belts. Then, in August of 1939, without a word of warning, Stalin double-crossed these liberals by signing a pact with Hitler—the pact, Mr. President, which was nothing more or less than Stalin's go-ahead signal for Hitler's general European war. Again, I call your attention, Mr. President, to the double-dealing of the American Communists. For weeks they picketed the White House in what they called at the time an antiwar demonstration. They carried their banners denouncing you and your policies as leading the American people into an imperialistic war. They organized and supported strikes of sabotage in many of the principal defense industries. I do not need to tell you that they came very near wrecking the defense program. Then, all of a sudden, the American Communists called off the White House picket line. They no longer saw the war as a conflict between equally unworthy imperialistic powers. They stopped their strikes of sabotage. All had changed. Stalin was now in the war.

Believe me, Mr. President, we have not seen the end of Soviet and Communist double-dealing. The ever zig-zagging line of the party will zig-zag again.

I wish to make the point that the Soviet constitution itself was nothing more or less than an ill-concealed device for hoodwinking foreign liberals into Stalin's camp during the People's Front period. Freedom of religious worship is, and always has been, as nonexistent in Soviet Russia as freedom of speech has been nonexistent in Hitler's Reich. The history of the Soviet regime in this connection is not one about which there can be any debate.

The present, unrepealed constitution of the Communist International has the following to say about religion: "One of the most important tasks of the cultural revolution affecting the wide masses is the task of systematically and unswervingly combating religion—the opium of the people."

In a published interview with an American delegation to Moscow, Stalin himself declared: "The party cannot be neutral toward religion, because all religion is something opposite to science."

Earl Browder, Stalin's agent in the United States, wrote the following: "We Communists do not distinguish between good and bad religions, because we think they are all bad for the masses."

A Communist Party pamphlet written by an American Communist, Prof. Bernhard Stern, has the following to say: "It is necessary to link the fight against the church and religion with the fight against capitalism and imperialism. The Soviet Union under a worker's and peasant's government is the only country in the world where religion and the churches are being combated with active cooperation of the government."

I could go on and on with an endless citation of the literary record of the Soviets and their agents on the subject of religion. Surely that is not necessary. I believe the American people know enough about the real facts to recognize the utterly fraudulent character of the Article of the Soviet Constitution which pretends that freedom of religious worship is permitted under Stalin's brutalitarian regime.

Communism and nazi-ism are equally possessed by the demon of hates which sets class against class or race against race. Religion cannot survive the triumph of communism or the ascendancy of nazi-ism. The truths which Americans hold most dear and which are incorporated in our institutions are in as much danger from Communism as they are from nazi-ism.

I call upon you, Mr. President, to clarify the situation with respect to Stalin and the four freedoms by making it unmistakably clear that the Soviet regime is utterly repugnant to the American people and nowhere more so than in its cruel pretense to freedom of religious worship.

I beg to remain,

Respectfully yours,

——— ———,

Chairman.

Tolerance Essential in Present Crisis

EXTENSION OF REMARKS

OF

HON. JAMES M. BARNES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

RADIO ADDRESS OF HON. JAMES M. BARNES, OF ILLINOIS

Mr. BARNES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on September 25, 1941:

America, in this troubled hour, has been surfeited with hymns of hate, with chants of malice, and with the discordant notes of racial and religious prejudices.

Today, when our country needs men who can reason without passion, men who can act without prejudice, we find that the floodgates have been opened, and our country, a nation dedicated to tolerance, has been inundated with billingsgate.

Too often, as we have sought for facts, we have been given invectives; too often, as we have searched for knowledge, we have received aspersions.

Bitterness, hate, and intolerance is the theme of the song being sung by both advocates and opponents of America's present foreign policy.

"They have sown the wind, and they shall reap the whirlwind."

Before the storm descends, let those who still retain the power to reason gather with those in whom the spirit of tolerance yet lives. Let them, as Americans, as Americans dedicated to tolerance, insist that the fate of our Nation shall be determined in an American manner, and only in an American way. Let such people declare to all who have been defending or opposing our Nation's foreign policy in an un-American manner, let them, I say, declare that we have had enough of hate, that we have had too much of intolerance, that we have no time for bigotry, that there has been too much of name calling, that too many appeals to passion and prejudice have been made. Let them declare that from now on, henceforth, we want facts and reason, and facts and reason alone.

Let them declare that the iniquitous hell's broth which has been brewed, brewed by men on both sides of the argument, shall no longer pollute the lifeblood of America, as America in this troubled hour, America in this time of world anguish and crisis, needs facts in place of rancor, reason instead of prejudice, tolerance and not intolerance, charity and not bigotry.

America, torn asunder by the inflammatory statements of impassioned men, needs the calm, dispassionate reasoning of a Washington, the philosophical attitude of a Jefferson, the kindly, charitable viewpoint of a Lincoln.

This country has great questions to decide; its very existence as an independent nation may be at stake. Our every step must be calculated; our every move must be based on reason. We need knowledge and facts to guide us. We need experience and real patriotism as mentors. The sea ahead is uncharted; we know not where the rocks and shoals of disaster may lie. One false move and all may be lost. This is no time for genuine patriots to indulge their spites; this is no time for self-seeking. This is no time to arouse latent prejudices, religious or racial. This is a time when our country needs the best that is in every one of us; this is a time when true Americanism, real patriotism, will give the best

I would question the patriotism of few, if any, of those men on either side of the debate. I grant sincerity to most of them. But I cannot grant that the man who advocates a policy of isolation is, perforce, a Nazi sympathizer; neither can I grant that the man who advocates intervention is, consequently, a tool of Britain. Personally I favor, and as a Member of Congress I have voted for, aid to Britain. I have done so because I believe that the best interests of the America I love are so served. Believing that, I am also willing to believe that many who insist on a policy of isolation do so because they sincerely believe that the best interests of the America they love are so served.

We cannot both be right, but we can both be sincere.

To me the world crisis in which we are engaged is not a test of whether England shall endure; it is not a test of whether Germany shall endure. This struggle has long since ceased to be a war between nations; it is a war between two totally divergent philosophies, two wholly different ways of life. It transcends boundary lines; it reaches down onto the hearthstone of every home.

Totalitarianism is foreign—yes; it is repugnant—to the American ideal of democracy. The totalitarian concept exalts the state and debases the individual. The totalitarian concept glorifies brute strength and spurns the rights of minorities. The totalitarian concept denies individual liberty, individual effort, individual dignity.

Nations, peoples, cultures—these mean nothing to the totalitarians. They would impose their degrading system upon the entire world. They have demonstrated that treaties, pledges, and assurances given by them are worthless.

They have overrun one country after another. Their lust for conquest will not be satiated until the swastika dominates the world.

That they plan eventual penetration of this hemisphere, and domination of this hemisphere, by economic means, is denied by none. They themselves boast of it. And many are convinced that, failing in an effort at economic domination, the Nazis will resort to a military effort.

America cannot do business with Hitler unless we too become a totalitarian government. Under his system it is the state that engages in business. Under our democratic system it is the individual. Do you for one moment believe that an individual can compete with a nation in the foreign markets of the world?

All who are acquainted with Nazi methods know that you can't do business with Hitler; and they know that Hitler, if he succeeds in his present efforts, would not long let us do business with any of our present customers.

That is but the economic aspect of a Hitler victory.

In addition, one must keep ever in mind the other aspects—the denial of individual liberty, the substitution of force for justice, the substitution of the Gestapo for courts of law, the brutal disregard of hard won liberties, and the right of a free people to be free.

Who would permit the American way of life to be cast aside, and in its place, accept the Nazi way of life? Not I! Not you! And I doubt that you can find anywhere in this land, an American who would.

One of our most cherished American liberties is the right of free speech. This right does not exist in a Nazi country. Make certain, then, that we of America do not emulate the Hitlerites and create conditions in our midst that lead to a denial of this right to anyone. But demand of all that, in exercising their right of free speech, they deal in facts, not in hate. For hate has no part in the American way of life.

Let us declare a moratorium on hate; let us demand that the future of our country, its foreign policies, at least, be discussed and debated with logic, with reason, and with knowledge and without prejudice, without passion and without vituperation.

Birthday of General Von Steuben

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

ADDRESS OF DR. A. H. DOELLEFELD

Mr. PLOESER. Mr. Speaker, on September 17 it was my pleasure to speak to the Carl Schurz unit of the Steuben Society of America at the Congress Hotel in the city of St. Louis.

The chairman of the affair was Dr. A. H. Doellefeld. His very able introductory remarks of the event are worthy of extension here so that others may understand and appreciate the patriotism of this very fine group of our citizens:

Steubenites and friends, we have gathered here this evening to celebrate a triple event:

First. The two hundred and eleventh birthday of General von Steuben.

Second. The one hundred and fifty-fourth anniversary of the adoption of the Constitution of the United States of America.

Third. The twenty-second anniversary of the founding of the Steuben Society.

This threefold occasion is the setting of our 1941 Steuben Day banquet. The crucial world situation will give to this banquet the greatest significance it has ever had, an opportunity to strengthen our belief in the Constitution, institutions, and traditions of our country, the United States of America.

The annual banquet has become the one great Steuben affair, a traditional celebration, that means more than a banquet, more than meeting friends, more than food for both body and mind. It symbolizes the objectives of the Steuben Society.

We again have as guest speakers Representatives from Congress and the Army. This should be the greatest event we have ever held, an occasion to reaffirm our faith in the Constitution and our cause.

We know we are a loyal people with one common cause, for which we are united in one strong effort to attain our objectives, which are:

First: Fostering a patriotic spirit among all citizens.

Second. Guarding our political liberty by maintaining an honest equality of citizenship, regardless of the birth, origin, or religion of any citizen.

Third. Upholding the Constitution of the United States of America and defending it.

Fourth. Maintaining the traditions of our country.

Fifth. Opposing alien influenced government so we may live in peace and happiness and be worthy of the name American.

We as Steubenites are proud to have as our patron, Baron von Steuben, to follow his footsteps and to keep alive the spirit of Steuben. Every year our organization presents to the military academy at West Point a sword, a replica of General von Steuben's sword, to the graduate with the highest honors.

United States Cavalry on the March

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

Mr. GILLIE. Mr. Speaker, through the courtesy of my colleagues in granting me a leave of absence, and through the cooperation of the War Department, I recently had the privilege of serving a 30-day tour of active duty in my capacity as a Reserve captain with the First Cavalry Division, United States Army, at Fort Bliss, El Paso, Tex.

My reasons for desiring a tour of duty were twofold. Firstly, I believed it to be my duty, as it is the duty of every patriotic American, to prepare myself for service in the defense of my country. And secondly, I wished to familiarize myself with Uncle Sam's new army—its objectives, plans, equipment, training methods, and the morale of its soldiers—so that I might have a better understanding of national-defense problems as they arise in this body.

Upon reaching Fort Bliss, after obtaining the necessary clothing and equipment, I was assigned to duty as assistant to the division veterinarian's office, under Maj. Harvey R. Ellis. We immediately began the task of inspecting the various cavalry units, culling out all animals unfit for service in the big July maneuvers, which were about to begin. I found that these horses were well cared for, and that a very small percentage were unfit to make the march. Like the men, they must be well trained and equipped for service in wartime.

My first actual experience in the field was a command-post exercise—C. P. X.—conducted in the desert near Fort Bliss, in which about 5,000 troops and 800 horses took part. Engaging in these warm-up maneuvers were the Fifty-sixth Cavalry Brigade, the One Hundred and Twentieth Observation Squadron, the Two Hundred and Sixth Coast Artillery Antiaircraft, the Second Battalion of the Two Hundred and Sixtieth Antiaircraft, and many unattached units. Also in action were 25 planes, Signal Corps supply trains, tank cars, armored and medical units, and so forth, all of which were to play their part across the checkerboard of military science and tactics.

Here were 3 days that I will always remember, with the temperature between 110° and 115° under a scorching sun, as the troops moved over the hot desert sands. The men stood the march very well, but several horses had to be evacuated to the rear during the exercise.

During the second day's march we were surprised by gas attack. A few explosions, shrieking sirens, and everybody had their gas masks on in a hurry. It was soon over and the march resumed.

Yellow planes were friendly planes, black planes were the enemy. On the final day of the exercise, while my captain and I were driving toward the front lines, black planes suddenly appeared over the brow of a hill. Lightning speed was demanded as we abandoned our car and raced for the mesquite bushes. I imagine the pilots enjoyed a good laugh seeing us scoot for cover.

All troop movements at night were done without lights; not even a flashlight was permitted. Many of the troops marched for 48 hours without rest. Our group, however, managed to get some sleep each night.

The C. P. X. ended, and while soldiers and animals rested for the approaching war games, officers of the division and attached units gathered with the umpires for a critique, to discuss what was right and what was wrong with the initial exercise.

Shortly before dawn on July 17 the Red and Blue Armies, comprising about 16,000 troops and 10,000 horses, moved into position for the big maneuvers, about 35 miles northwest of Fort Bliss, between the Hueco Mountains and the Organ and Sacramento Mountains. With weapons of war for 10 days of rigid, realistic, two-sided maneuvers, the opposing armies began the engagement which was to extend over an area 70 miles by 60 miles.

More than 200 umpires closely observed the performance of soldiers who were preparing for the even bigger September maneuvers with the Third Army, in Louisiana and east Texas.

Movements of the troops were carefully planned in cooperation with the commanding general and the Chief of Staff. Movements were based on reported enemy positions, and orders were given to subordinate command posts, moving troops into position for attack or to repel attack.

In this phase of the maneuvers, while my companion, Captain Smit, and myself were trying to locate some injured horses about 25 miles from the veterinary collecting station, our truck became stuck in the mud and for 3 hours we dug, pulled, panted, sweat, and broke rope chains. Finally, with the aid of two more trucks and a dozen men, we extricated our car, only to find, about a half mile up the line, our injured horses already loaded

into another truck, stuck deep in the mud.

But these modern soldiers, many of whom were clerks, bookkeepers, and salesmen in civilian life, do not give up easily. With grim determination they went to work, unloaded the horses, and with our help soon had their loaded truck on the way to the collecting station.

That same evening at midnight another of our collecting trucks became mired in the mud and sand. Horses were unloaded, and the boys dug themselves out and reached the collecting station before daylight—all without the aid of lights.

Yes; they are making them tough down at Fort Bliss—tough and resourceful. These lads will soon be able to take care of themselves under any circumstances.

As for myself, I asked for no favors and received none. I ate with the boys, slept with them under the blue dome of heaven for a tent, and the sands for springs under our blankets. They are a fine, sturdy, hard-hitting, go-getting lot, these lads of Uncle Sam's 1941 Army. Let us give them all the equipment and support that we can.

The second phase of the maneuvers was a plan to cut a railroad and blow up a railhead. The Red Army was assigned to defend the railroad. After 2 days of maneuvering, the Blue forces slashed through the Red line and cut the railroad in several places. A few real casualties began to return to the rear, but none were serious.

The third phase of the maneuvers was what is termed in military science an orderly withdrawal, so named because it is said that the American Army never retreats. In this phase hordes of troops, animals, and motorized vehicles moved swiftly across the desert in direct and flanking attacks. Light tanks, trucks, armored scout cars, motorcycles and airplanes all took part.

Umpires dashed around in bantam cars flying white flags, designating the casualties. They moved flags to indicate blown-up bridges, culverts, and water wells. Long supply trains, including horse and mule pack troops, toiled through the desert wastes to keep the fighting troops stocked with ammunition, gasoline, forage, and food.

The veterinary collecting station moved forward 10 miles after dark. Supper was eaten without lights. After checking our string of weary horses, we gathered to discuss plans for the following day—then crawled between blankets, boots and all, only to be awakened early the next morning by a troop of Blue mounted cavalry yelling:

You are our prisoners!

The war was over.

I consider that I was fortunate in being a member of the veterinary collecting company, for we not only evacuated our own animals but also those of the "blue" army, thereby giving us an opportunity to observe both armies in action. Skirmishes between two opposing regiments of cavalry—antiaircraft in action, scout cars and tanks being wiped out, a charge through a mountain pass, supply trains resting along the roadside awaiting orders to move up, machine-gun troops attacking the enemy, heavy weapons thundering—all this took place before our very eyes. Even though the war was makebelieve, the exultation of the impending action gripped us and held us spellbound as we waited for the next skirmish.

I am deeply indebted to Gen. Innis P. Swift, commander at Fort Bliss, who took time out from his busy day for a conference after the maneuvers were over to bring to my attention the importance of the cavalry in the modern army.

General Swift pointed out that Hitler used over 700,000 head of horses in the Polish and French campaigns, and expressed the firm conviction that cavalry has a very vital role in modern warfare, especially in fighting over rough terrain.

"I am convinced," he told me, "after observing these maneuvers, that the cavalry is needed for 'mopping up' operations after bombers as air artillery, and mechanized equipment, have made determined advance attacks on the enemy.

"The cavalry, with the support of the air arm, can do the same job over rough ground that Hitler's infantry and motor trucks did over a good highway system in France last year," he said.

The general was then asked this question:

"When the terrain is so rough that trucks bearing troops cannot negotiate it, how can trucks carry supplies to the cavalry?"

The solution to that problem, he replied, is air transport. "That is where the air arm should coordinate with the cavalry," he said.

General Swift has recommended that the Army immediately assemble 13 commercial planes at Biggs Field for the purpose of conducting an extensive test with the First Cavalry Division in supply by air transport. The war has developed so rapidly, he declared, that planes already have been used successfully to transport supplies to troops at the front.

General Swift's hobbies are military strategy and the soldiers who serve under him. He frequently reminds his officers that one of their most important duties is to take a personal interest in the welfare of their men.

"Officers must see to it that the men in their care are properly fed and clothed," he declared. "They should know their weaknesses and shortcomings, and be able to discuss their problems understandingly. Officers may fool other officers but they cannot fool their men. It takes a real officer to command the genuine loyalty and respect of his troops."

General Swift and the officers and men of the First Cavalry Division deserve high praise for the determined effort each and every one is putting forth to build a great fighting machine, despite many obstacles. Their spirit and cooperation are an example to the rest of the armed forces of what can be done in the face of overwhelming difficulties. The men are being well fed, well clothed, and well housed, and in spite of a critical shortage in weapons, vehicles, and ammunition, well trained.

Yes; they are making them tough at Fort Bliss—these hard-charging, hard-riding soldiers of the First Cavalry Division—these lads who man the tanks and antiaircraft guns—these engineers who build the bridges—these boys who are sacrificing to make America strong.

I foresee that any nation that attacks us will meet a wonderful and terrible foe.

Another outstanding leader I was privileged to meet during my tour of duty was Lt. Gen. Walter Kreuger, commander of the Third Army, with headquarters at Fort Sam Houston.

General Kreuger came to Fort Bliss to observe the performance of troops in the big maneuvers, and to appraise the work of officers and men. I had a memorable conversation with him at breakfast one morning, and came away convinced that the Third Army is under capable leadership.

General Kreuger rose to his present high rank the hard way. Starting out as a buck private, he has advanced through the ranks to a position second only to Gen. George C. Marshall, Chief of Staff. Few enlisted men ever attain officer's ranking and General Kreuger's rise has been termed "little short of a miracle."

Now 60, he was decorated for World War service in France. His reputation is brilliant for handling large numbers of troops in swift and strategic operations. General Swift and General Kreuger—here are two leaders of Uncle Sam's Army that any man would be proud to follow into battle. They represent the very highest type of leadership, and bring to the United States Army those qualities of resourcefulness, youthful enthusiasm and genuine ability so necessary to the fighting forces of any country.

In closing I wish to extend a word of appreciation to Col. Raymond A. Kelser, Chief of the War Department's Veterinary Division, whose splendid cooperation made my tour of duty possible; to Col. Daniel B. Leininger, station veterinarian, Maj. Harvey R. Ellis, division veterinarian, and Capt. Walter Smit, with whom I worked; to Maj. Earl Thompson, Lt. Col. Paul C. Kucher, and Lt. Col. Delwin M. Campbell, for their many courtesies; and to my colleague from the Sixteenth District of Texas, Robert Ewing Thomason, through whose kindness and hospitality I made the acquaintance of many delightful El Paso citizens.

I discovered that the people of El Paso has a very warm place in their heart for Representative THOMASON, who has served them loyally and faithfully in Washington for many years. And I, in turn, have a very warm place in my heart for the people of El Paso who so graciously opened their homes to this "Yankee Republican" and made his sojourn in their midst a most pleasant and eventful one.

South Carolina

EXTENSION OF REMARKS
OF
HON. HAMPTON P. FULMER
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

RADIO ADDRESS BY HON. HAMPTON P. FULMER, OF SOUTH CAROLINA

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an address delivered on the evening of September 30 over radio station WINX under an allotment of time to the State of South Carolina. This program was in charge of Mr. J. Austin Latimer, originally from Williston, S. C., my district, and now residing here in Washington, president of the South Carolina State Society, who also made an address concerning the South Carolina Society and our State.

The address follows:

I want to thank WINX for allotting this broadcast to South Carolina.

I am delighted and I feel very highly honored in being privileged to take part in this broadcast in representing the Palmetto State on this occasion.

South Carolina, which is one of the smallest States in the Union, borders on the Atlantic Ocean, where we have a large and important navy yard, and wonderful port facilities at that old, historic city, Charleston, overlooking the sea, with Fort Sumter, rich in history, nearby.

We of South Carolina are proud of the beautiful, picturesque coastal region, where we have the most wonderful gardens in the world—magnolia, middleton, and cypress gardens.

The forests, adjacent to the magnificent highways, are covered with beautiful hanging moss, presenting a real treat to the thousands of tourists who annually travel in this part of our State.

Then, there is the central area containing fertile agricultural farm lands, with an abundance of natural iodine content.

My home city, Orangeburg, is situated therein, on the Edisto River, where we have the beautiful Edisto gardens.

The capital city, Columbia, is located in the central part of the State, with its statehouse still showing the scars from the cannon balls fired by Sherman and his men in 1865.

Although the city was burned to ashes at that time, it is today one of the most beautiful, progressive, and prosperous cities to be found in the Southland.

South and west of Columbia nearby we have two large power projects, the Santee-Cooper and the Saluda dam, both of which cover thousands of acres of land with water, generating electricity, not only turning the wheels of industry, but today, under the Rural Electrification Administration, this power is going into farm homes, bringing to this forgotten class of people an opportunity to enjoy those things which mean relieving drudgery and substituting happiness and contentment.

There is, also, the Piedmont section in the upper part of the State, spreading south of the Blue Ridge Mountains, with Caesar's Head overlooking many prosperous cities like Greenville and Spartanburg.

This is a section rich in manufacturing.

If you will read the pages of history, you will find that South Carolina has played her part in furnishing men and women to fight for the independence of this country, the country we all love, and the maintenance of same.

In that desperate struggle for liberty and freedom—the kind of liberty that Patrick Henry was willing to fight for, and, if need be, to die for, under the leadership of the Father of our country, George Washington—there were such men as General Sumpter, the gamecock of South Carolina; General Marion, known as the swamp fox; Pickens, and others.

These and other South Carolinians were able to make a name for themselves and history for our State.

I call to your attention men like Edward Rutledge, Thomas Heyward, Jr., Thomas Lynch, Jr., and Arthur Middleton, who took part with Thomas Jefferson, Benjamin Franklin, and others in writing and signing the Declaration of Independence of the United States, January 18, 1777.

Among the signers of that great document the Constitution of the United States, on September 17, 1787, you will find the names of the following South Carolinians: John Rutledge, Charles Cotesworth Pinckney, Charles Pinckney, and Pierce Butler.

Later on you will find that the name of that distinguished South Carolinian and statesman, John C. Calhoun, was recorded in history with Webster and others of his day as a leader, not only for the South but for the Nation.

He it was who fought for States' rights, and against the passage of tariff legislation, which was finally enacted into law by the Congress, a law which was clearly and definitely in the interest of manufacturers at the expense of farmers and consumers.

Let me quote Senator Calhoun on the Tariff question. I quote:

"We are the serfs of the system, out of whose labor is raised not only the money paid into the Treasury, but the funds out of which are drawn the rich rewards of the manufacturer and his associates in interest. Their encouragement is our discouragement. The duty on imports, which is daily paid out of our labor, gives them the means of selling to us at a higher price; while we cannot, to compensate the loss, dispose of our products at the least advance."

The fight which Calhoun made for States' rights more than a hundred years ago is still a live issue, confronting those of us who believe in special privileges for all or special privileges for none.

Let me refer to that great leader in State and national affairs, at one time Governor of our State and United States Senator, Gen. Wade Hampton.

He it was, with his red-shirt brigade, my father being one of them, who delivered South Carolina from under the carpet-bag rule in 1876.

There are those who are serving in Congress now who will remember that distinguished South Carolinian, who is recorded in the history of our State not only because of his constructive services to the State as Governor, but for his outstanding services to his people and to his country when he served in the United States Senate for many years. I refer to Benjamin Ryan Tillman.

Let us not forget another outstanding citizen, who served many years in Congress as chairman of the Agricultural Committee, having many major pieces of legislation to his credit, the late Honorable Francis Lever.

South Carolina is not only rich in service to the State and Nation by her distinguished citizens, who have been able to take an important part in making history for the State and the Nation, but she is rich in natural resources, much of which is still undeveloped.

God has blessed us with a wonderful climate the year around.

Our State is populated with real Americans, and we can boast of the fact that we have the purest Americanism that can be found in any State in the Union.

Europe is at this time engaged in the most destructive war that history has ever recorded, wherein millions of innocent men, women, and children are being killed and wounded purely because of selfishness, a war which is even threatening that democracy for which our forefathers fought, and the destruction of the American way of life, which is based on justice, freedom, and religion.

There is no State in the Union which is more solidly behind the administration and the President's foreign policy than South Carolina and her citizens.

My people have not waited for the draft act to indicate their willingness to stand up and be counted showing their readiness to defend the liberty of our people and the preservation of our democracy.

Threat to Freedom of Expression

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address which I delivered over station WMCA on September 26, 1941:

Freedom of expression is one of our sacred possessions. It has contributed greatly to our strength as a nation. It has given great confidence to our people. They may always speak their minds on any subject. Whatever their daily pursuits, they have an independence that perks them up and gives them ambition. They have great assurance and protection in the thought that they can talk and act freely without fear or trepidation. The Nazi, the Fascist, the Communist cannot express themselves. Brown Shirts, Black Shirts, and Ogpu bludgeon them into silence. Only Der Fuehrer, Il Duce, or Commisar Joe Stalin may speak. What a deadening effect upon one's desire to forge ahead. What a pall upon ambition. This freedom of thought has made possible our progress as a nation.

Must we not, therefore, protect to the utmost this cherished right? Every assault upon it must be resisted. Every threat must be repelled.

The current probe in Washington, set up by a subcommittee of the Senate Commerce Committee to investigate alleged war propaganda in the movies, and abetted by the America First Committee, is a dark shadow

across the sunlit path of free thought and speech. It threatens freedom of the screen. It is a direct menace.

Thomas Jefferson was so fearful of any inroads upon freedom of expression that he said: "The base of our governments being the opinion of the people the very first object should be to keep that right; and were it left for me to decide whether we should have a government without newspapers or newspapers without a government, I should not hesitate a moment to prefer the latter."

Freedom of opinion and expression involve the press, the drama, the radio, pantomine, the dance, painting, the pulpit, sculpture, etching, music, lyrics, telegraph, telephone, costumes, movies, literature, conversation and soap-box oratory. It runs the gamut of all human relations. Destroy one medium and you threaten the rest. Today it is the movies under attack; tomorrow it may be the radio, and the next day the press.

When the French Ambassador, Gaston Henri-Haye, complained recently to the State Department that cartoons were appearing daily holding up to obloquy and scorn Marshal Petain, because of his Vichy "collaboration," he was in turn ridiculed and subjected to horseplay. Why? Because freedom of thought and expression of the artist were involved. It seemed laughable to protest. This illustrates our deep reverence for liberty of opinion.

Congress can no more direct the pen of the cartoonist, no matter how deeply it may be dipped into the well of gall or humor, than it can direct and determine the scenario of a movie or theme of a story. The famous cartoonists, Rollin Kirby, of the New York Post, and Berryman, of the Washington Evening Star, slash at isolationists and Hitler daily. It were just as logical to investigate their wit as it were to investigate the subject matter of films. In either case, there is intimidation and threat to freedom of thought and expression.

Recently there was a parade in our city of native-born of countries overrun by Hitler. They appeared in quaint native costumes. Their dress made the parade more dramatic and effective. If the movie inquisitors are right, they could also have prohibited this display of costume as propaganda—as an undue incitement to get us into the war on the side of the nations represented in the parade.

There is a moving play, The Wookey, now running at the Plymouth Theater in New York City. It is a powerful and dramatic picture of the embattled English spirit facing Dunkerque and blitzkrieg. It may be termed pro-British propaganda—depending upon one's definition of "propaganda." Now, if the isolationist sponsors of the cinema inquiry can control legally the subject matter of the films and can eliminate this picture as pro-British and that picture as anti-Nazi, then with equal grace they could order this pro-British play off the boards.

If they can object to the film, That Hamilton Woman, because it extols the hero of Trafalgar, Lord Nelson, and makes the audience root for Britain, then why could they not similarly place the bar sinister upon and prevent the revival of a great play like Victoria Regina, which was so beautifully portrayed by Helen Hayes a few years ago. That play painted in most rosy hues the lives of Queen Victoria and her consort, Prince Albert.

I read that Gilbert Miller will soon produce an historical drama about another queen, Anne of England. He had better get clearance from the movie "Spanish Inquisitors" before he invests his money in scenery and casting of characters. He may be charged with engineering poisoned propaganda. Then there is the play, Candle in the Wind, by Maxwell Anderson, which had its premiere in Boston September 16. It goes to Washington soon, when the inquisitors can see for themselves a blistering attack upon the Nazis. It depicts the tortures of a concentration camp.

The films Night Train, Pastor Hall, U Boat 29, Mad Men of Europe are especial targets of the inquisitors. They are deliberately anti-Nazi. So is Lillian Hellman's drama, Watch on the Rhine, now playing on Broadway.

Both films and play tell of foul Nazi activities. Why should not the American public witness these Nazi Huns in true dramatic fashion? Their diabolical cunning and sadistic cruelties must be identified so that we may suitably protect ourselves. Shall producers be punished for thus rendering a patriotic service?

Friendship Bridge is a decidedly praiseworthy program over this station. British children temporarily here to escape blitz bombing in London speak thereby to their parents and guardians in England. This program is full of pathos and brings tears to the eyes. It may be deemed by some poignantly and effectively pro-British. If the movie inquisitors are right, they should stop Friendship Bridge and similar pro-British radio programs.

Isolationist witch hunters can rant and rail all they wish against Alfred A. Knopf for publishing Shirer's Berlin Dairy and Leland Stowe's No Other Road to Freedom and against Little, Brown & Co. for publishing Douglas Miller's You Can't Do Business With Hitler and the novel The Mortal Storm, later adapted for the movies and now on the banned list; rant and rail against the Saturday Evening Post for publishing and running serially Escape, which was subsequently filmed and is also on the banned list; but they cannot punish and censor these authors and publishers for pro-British and anti-Nazi sentiments expressed in these publications. If they are right and could legally ban The Mortal Storm and Escape as films, then they must per se order the burning of the books from which these films sprang. The film, Manhunt, which reveals the subtle brutalities of Nazi spies and which is on the prohibited list, was adapted from a novel called Rogue Male, also published by Little, Brown & Co. We thus have another book which is anathema, and I suppose must be burned.

I am of the opinion the inquisitors have the lion by the tail. They are conjuring up bogeys from nowhere. Isolationists behind the probe are figuratively spitting in the wind. They spit upon themselves. Their pretenses are as hollow as their efforts are unavailing. The country is rallying around Roosevelt. Opposition to his foreign policy is dwindling. The American Legion resolution of support is a healthy reflection of public opinion.

A picture especially condemned by the rainbow chasers is Charlie Chaplin's The Great Dictator. Chaplin, as Hitler, clowns throughout and makes Der Fuehrer look utterly ridiculous. Il Duce also is the subject of considerable buffoonery. This film employs weapons of ridicule and satire effectively sharp. Dive Bomber covers high-altitude flying and glorifies our air service. If that is warmongering, then Hitler is Little Lord Fauntleroy. We should have more of such pictures in the interest of our own defense program.

Sergeant York is a drama true to facts and and tells of a conscientious objector who becomes a World War hero. Our beloved Secretary of State, Cordell Hull, is portrayed therein as a Tennessee Congressman from the district in which Sergeant York resided. It is an intensely patriotic film.

The American Firsters demand that both sides of the international question should be shown. I suppose they want pictures about pot-bellied Reichsmarshal Goering and his Messerschmitts and Stuka bombers dynamiting Coventry and Rotterdam, or Admiral Raeder and his U-boat "rattlesnakes" blasting ships like the *Robin Moor*, the *Zamzam*, and the *Pink Star*. I would show the other side of the shield. I would present Goebbels and Himmler, for example, but I would get Walt Disney to show them up as boa constrictors and jackals, I would picturize Adolph Schicklegruber as a teppischfresser (carpet eater). Shirer, in his Berlin Diary, says he frequently goes on a rampage in his nervous crises, flings himself on the floor, and chews the edge of a carpet.

Confessions of a Nazi Spy is based upon F. B. I. records. Read the testimony of the present trial of 16 Nazi spies in the Federal court at Brooklyn, and how Wilhelmstrasse engineered through them the attempted theft of our secretly guarded bomb sight, gun turrets, antifog devices, and range finders. One rises in wrath against these malefactors.

Films like Confessions of a Nazi Spy teach us to beware of the Nazis. They are signals necessary to arouse some Americans out of a dangerous complacency.

Nurse Edith Cavell portrays this English heroine of the first World War who was ruthlessly shot by the Boche. Edith Cavell ranks with Florence Nightingale, heroine of the Crimean War, and our own beloved Clara Barton, of the Civil War. How can valid objection be made to the picturization of the greatness of Edith Cavell, who is the very embodiment of the Red Cross?

Lord Jeff, the Sun Never Sets, Lives of a Bengal Lancer, Wee Willie Winkie, Susanna of the Mounted, Gunga Din are pictures portraying incidents in British or European history prior to the outbreak of the present war and are unrelated to the present conflict. Calling them pro-British war propaganda is just whistling in the wind.

In the issue of the Nation of July 5 last, appeared the following: "In New York, Philadelphia, Chicago, and Los Angeles, in dozens of theaters throughout the country, Hitler's propaganda service is daily influencing people and making new friends. Through the medium of skillfully produced feature films and news reels German-American citizens are being reminded of the ties of blut and erde (blood and earth) which link them with the Fatherland, and an einheitsfront (united front) of Nazi sympathizers and dupes is being consolidated."

Is it not anomalous that not one of the abettors of this inquiry has raised a voice (be it ever so feeble) against the Third Reich in importing and circulating in our country celluloid propaganda. These films edited by Goebbels extol the exploits of the Luftwaffe and the panzer divisions. Sieg im Westen (victory in the West) was produced actually under the German high command. It depicts the dreadful cruelties of Hitler's conquest and seeks to convey to Americans and particularly German-Americans the futility of resistance to the invincible German Army. What of Blitzkrieg im Westen, whose theme is the irresistable new order of the Reich? It advises Americans that opposition to Hitler is hopeless and that resistance will bring most melodramatic revenge.

The Universum Film Aktiengesellschaft (U. F. A.) releases about 50 Nazi newsreels and 120 shorts each year. The closing of the Nazi consulates did not affect this volume of distribution. The Reich subsidizes many theaters where this Nazi barbarism is shown.

Is Nazi propaganda on the screen sacrosanct while pro-British is accursed?

I maintain that this movie probe oversteps the bounds prescribed by the Constitution in that it seeks to create a congressional channel through which must stream movie plot and story. Congress cannot legislate on such matters; therefore, it cannot investigate such matters. I have been asked what legally constituted body or procedure then would be constitutional to examine

into these factors. I answer, "There are none."

The Constitution says freedom of expression, whether in movies, television, press, or what have you, is sacrosanct insofar as congressional fiat is concerned. Our constitutional fathers wisely left judgment in such matters to the highest tribunal in the land—namely the court of public opinion.

If certain Senators, in answering questions put to them by a member of the subcommittee, had said that the purpose of the investigation was to probe the practice of block booking or to determine whether or not the movies violated the antitrust laws or were indecent or violative of public morals or incitement to treason—then the inquiry would be on firm ground. There could be no valid objection. But the answers of the gentlemen avoided all references to such taints or illegalities and pointed clearly and solely to an attack upon the movie producers' penchant for giving the public what it wants—pro-British and anti-Nazi pictures and shorts. They even vouchsafed that they had no specific legislation in mind. Apparently the inquirers are on a roving expedition, with neither chart nor compass. The probe is a mere sounding board, to voice the views of isolationists and enemies of Roosevelt's foreign policy.

I hold no brief for the movie companies. They may not be guiltless of many wrongs. I do not know. But they, like every other citizen, are entitled to freedom of expression and neither Congress nor any part of Congress can take away any of that right.

Finally, I say to the isolationists what Franklin said many years ago: "They that can give essential liberty to obtain a little temporary safety deserve neither liberty nor safety."

National Defense

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

ADDRESS BY MISS STELLA AKIN, SPECIAL ASSISTANT TO THE ATTORNEY GENERAL

Mr. PRIEST. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include an address on national defense delivered by Miss Stella Akin, special assistant to the Attorney General, before the Lehigh County democratic meeting in Allentown, Pa.:

It is, indeed, a pleasure to come to Allentown.

In Washington we hear much of the work of our industrial centers. It is most gratifying, therefore, to be given an opportunity to visit this one, and to obtain first-hand knowledge that it is answering its Nation's call for defense material and other essential needs in this time of grave emergency.

That this is a time of crisis, let no one doubt.

In recent months production has been speeded up in your city. But the calls will come to you for more and more production just as they are going to every other corner of this country—to other industries, to the farmer, to labor, to every man and woman.

To answer these calls will not be an easy job. But the stake for which we are working is well worth-while. Our predecessors struggled to establish this Nation. It is up to us to maintain it—and maintain it we will.

For two long years the world has witnessed the fury of man against man—machine against machine.

Forces of violence and evil unleashed in other lands are unprecedented in the annals of history. Ruthless slaughter, crushing of freedoms, annihilation of minorities, and the blotting out of the principles of democracy we in this land hold dear are but a part of the devastation wrought by the iron fist of the dictator nations.

"All-out" calamity has been loosed by a mad corporal whose mechanical divisions, whose stukas and panzers, paint the world with the red of blood in the same sweeping way that this man once daubed less vivid colors on the houses and barns of his native land.

Thus far we have played but one part in the great struggle. Our material has gone to aid those arrayed in battle against the forces which threaten the existence of nations such as ours.

It has gone to help those people who, by gun and sword, are waging war against nazism, fascism, and the other "isms" which jeopardize the perpetuation of the only decent "ism"—Americanism.

Those people, our friends, have asked for aid. We are doing what we can to give it. But more will be asked, and more must be given. This is the least that we can do.

From American factories, American farms, and American fields, guns, tanks, food, and clothing must go forth in an unending supply. American hands, American hearts, must join together in keeping the vital lifeline of essentials intact.

Each one of us must do his or her part.

Sacrifices we must make. But our sacrifices, we can be certain, will result in a victory over the forces which threaten American principles of life, liberty, and the pursuit of happiness.

The tasks of the men are many.

Our sons and brothers, thousands of them, have been called into the armed forces to prepare themselves for the defense of our country. Recruited from every walk of life, from every race and every creed, they are serving unswervingly to preserve the ideals which united these 48 States into one fortress of freedom. Woe unto him who challenges their loyalty, their ability, or their courage.

It has not been easy for many of these young men to alter the course of their lives—to abandon peaceful civilian pursuits for those of the Military Establishment. But they have done it, and we who stay at home can do much to make their paths more smooth.

Napoleon once said that "morale is to material as 3 is to 1." But a general in our Army said recently the ratio has been changed and that now "morale is to material as 10 is to 1."

Without morale no army can succeed, whether its goal be peacetime training or wartime conflict.

Various service clubs are endeavoring to provide entertainment for our soldiers, particularly when they are on leave. By assisting those organizations through personal services and contributions we can benefit our Army and our country. But we can do more than that.

Women especially can assist in the development and maintenance of this essential spirit.

These sons and brothers of ours miss their home life when away from their own firesides. We can alleviate that longing by opening our doors to them—by remembering and following the slogan, "Take a soldier home to dinner."

We have heard much of our good-neighbor policy. We should apply it to these—our defenders.

They, too, need materials from our factories and fields. While maintaining the life line to our friends abroad we must also provide the necessary equipment for the rapidly expanding armed forces.

Only by the utmost effort can we fulfill the demands to be made upon us. Only through unity of purpose can we achieve the necessary result.

Here again the women of America can play a vital role.

Some men may disagree, but from time immemorial the influence of women has had an important, a determining effect upon the actions and behavior of man.

Men may have enacted legislation, but very often its origin can be traced to the opposite sex, and the briefest summary of our history demonstrates that women for centuries have guarded the heritages established by their forefathers.

In a recent address to an organization of women, Brig. Gen. Lewis B. Hershey, Director of Selective Service, said:

"It seems to me that there is a definite place in American life for an organization of women dedicated to service. I firmly believe that it has the potential capacity to do more in the furtherance of national unity and the building of national morale than can be accomplished by any other type of organization. In the first place, it begins with those who have through the ages guarded the customs and the behavior patterns of the clan, the tribe, and the Nation.

"Womankind has been the arbiter of what was and what was not accepted in conduct. When all of this sex decide that strikes are injurious to national defense legislative action will be unnecessary. The women of America have decided what America has believed, and they will decide what America will believe."

General Hershey should know of what he speaks. For in connection with the administration of selective service he has been closely associated with the wishes, the reactions, and demands of the mothers, wives, and sisters of our selectees, and they have been many and varied.

Women, with unity of purpose, can achieve any goal.

They can build the public morale, they can go a long way toward stopping strikes or slow-downs of production. They can influence public opinion and thus prescribe the destiny of a people.

Their sacrifices can guide the course of statesmanship.

Certain elements of our people at this time question the necessity of sacrifice, express doubt as to the wisdom of our course.

Other elements, by word and deed, for reasons of their own, seek not only to hinder but to block us in our progress.

It is a fundamental principle of democracy that every person is entitled to his own opinion. But when a nation faces the crisis of its life, the Judas who aids the enemy by deliberately obstructing the chosen path of the majority of his own people must be driven from the ranks.

Abroad, once proud nations bow their heads to the will of the Nazi and his satellites because charlatans were permitted to tap the arteries of preparedness—to drug the peoples with the narcotics of inertia and false security.

Norway, France, Belgium, Holland, Poland, and others listened too long to the voices of appeasers.

Attacked by the panzer divisions, the dive bombers, they fell before the might of Hitler's military machine—and the treachery of their own "fifth columists."

This must not happen here.

It will not happen if all of us do our share.

In doing our part there is one age-old heritage of this Nation which must not be forgotten.

This heritage precludes class distinction from interfering with the basic rights of all our people.

The work of one is as important as the work of the next. Particularly is this true in a time of emergency.

No man or woman should feel that he or she is a member of a particular class and for that reason is prevented from taking part in the common task. No man or woman can say that as a member of a class he or she is not obligated to work for the welfare of the country as a whole.

There must be a feeling among all of us that each one is an integral part of the whole.

We must achieve by voluntary means a singleness of purpose—a uniformity of action.

Only when this mutual bond exists can we hope for national success.

Our house must be put in order. We have straightened it up to a degree, but some of the corners still need dusting.

There are luxuries which we must forego, luxuries that these times will not permit—not tolerate.

The cost of our program will not be small. We must pay the bill for things we hope to achieve. The road to peace and freedom will not be paved with good intentions.

Our Government is seeking now to keep its indebtedness as low as possible by calling in necessary money to meet its obligations as it goes along. It cannot do this entirely, but it can alleviate the future burden in part.

Through taxation, sales of defense bonds and stamps, some of the needed funds are being gathered.

Once again the way is open for each of us to take part in our national program. Once again the women can play an important part. The giving up of some item, some item which we can do without, will permit the purchase of a defense stamp. A bit more sacrifice and we can become owners of defense bonds. The taxes may be higher than usual but we can plan for them and the burden will not be too cumbersome.

Bear in mind that the woman who foregoes a pair of stockings now and then, a facial or an occasional wave, is in much better position to talk friend husband into reducing the cost of cigars—to persuade him that a Sunday at home will permit him to contribute more to the national welfare than a round of golf.

The children will not mind the loss of a soda or a sundae if their elders guide the way.

Concessions must be made for the moment.

These concessions, these sacrifices do not mean that we are forsaking our traditions or our principles. When the Father of This Country, George Washington, waged war for freedom he asked his Congress to give him soldiers and unusual powers. It was the only way he could hope to win against the tyrants of that day.

When this Nation was disrupted by the War between the States, Abraham Lincoln asked for and received greater powers, as did Jefferson Davis, the President of the Confederacy.

In the War with Spain President McKinley obtained authority beyond the ordinary to carry on the conflict.

Woodrow Wilson was given almost unprecedented power to carry on this country's campaign against Germany in the World War.

These Presidents were acting in times of emergency and the Congresses were willing to give them the authority they needed to bring the conflicts to an end. But when the crises were concluded, when the smoke of battle cleared, then the extraordinary powers were taken from the Chief Executives and returned to their proper custodians—the people.

As these things were done in bygone emergencies, it is only natural that they will be done—are being done—in the present time of peril. But what we sacrifice now will be temporary and far better than the permanent surrender of our institutions.

The gravity of the situation is no less now than it was in the days of Washington, Lincoln, McKinley, and Wilson. Our people met the challenge in those days. They can and will do it again.

We do not want war. The American people despise war. At the present it seems that we can avoid armed conflict by giving a sufficiency of material aid to the people who are now fighting against Hitlerism.

This does not mean that the forces of the Nazis or the Fascists—the German, Italian, or Japanese Governments—can proceed to the desecration of the world without remonstrances from this Nation.

Their plottings, their intrigues, their brutalities already have come dangerously close to our shores. It is necessary for us to be on the alert constantly to guard against their encroachments.

Our Navies patrol the adjacent seas. Our planes shuttle back and forth across the mountains, the valleys, and the coast lines in ever-increasing numbers and splendor.

Our men and machines travel the road to preparedness. Our products leave our ports by night and day for those lands where the staunch and stalwart combat the might of the aggressor.

Yet there is room on the ways for more ships. Plane production has not reached the maximum. Many fields lie fallow. Our men need more materials of every kind, as do our friends across the sea.

It is up to you and the rest of us to supply the needs of this Nation and of those who wage war on the side of democracy.

The smoke must roll from our factory chimneys. The skies must be darkened with ships of the air. From the farms and fields must rise the dust of the thresher.

When all of these gather in the heavens there will be no black-out of democracy. For this truly will be the cloud with the silver lining.

And when the smoke and dust have been cleared away in time to come peace and serenity will again shine down upon this land of ours, and happily upon all the world. America will continue on the course fixed for it nearly two centuries ago—a free nation, a free people—with liberty and justice for all.

On the Life and Works of Hon. E. W. Marland

EXTENSION OF REMARKS

OF

HON. JACK NICHOLS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. NICHOLS. Mr. Speaker, the people of the State of Oklahoma lost a great and good friend in the death of Hon. E. W. Marland, former Member of Congress and former Governor. He was a servant of the people in a true sense of the word, and had performed thousands of kindnesses and personal favors for people all over the State that the general public did not know about.

When he had riches he shared them freely with those who were in need, and when he had official power and authority he used this in the manner that he thought was best calculated to be of good to the greatest number of people.

I believe that the passing of the years will add to the respect and esteem in which Mr. Marland is held by the people of Oklahoma. It is examples such as his that show us the true worth and dignity of the human soul.

The Saving of England

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appears in the October 4 issue of The Saturday Evening Post, and as an introduction to the editorial may I quote from George Washington:

Against the insidious wiles of foreign influence I conjure you to believe me, fellow citizens, the jealousy of a free people ought to be constantly awake.

[From the Saturday Evening Post of October 4, 1941]

THE SAVING OF ENGLAND

When Winston Churchill took over, in May 1940, the bell appeared to be tolling for the British Empire. Five days after the Germans had marched into Paris he said to the Commons:

"The battle of France is over. The battle of Britain is about to begin. On this battle depends the survival of Christian civilization. Hitler knows he will have to break us in this island or lose the war. If we stand up to him all Europe may be freed and the life of the world may move forward into broad, sunlit uplands; but if we fail the whole world, including the United States * * * will sink into the abyss of a new dark age, made more sinister and perhaps more prolonged by the lights of a perverted science."

To the House of Commons again, on June 25, he laid the case bare. The moment of great despair had been when the dying appeal of France to America fell short. On that he made no comment, saying only what had happened:

"M. Reynaud, the courageous Prime Minister of France, asked me to meet him at Tours. * * * We agreed that a further appeal should be made by M. Reynaud to the United States, and that if the reply was not sufficient to enable Reynaud to go on with the fight then we should meet again. * * * On the 16th I received a message from M. Reynaud * * * to say that the American response had not been satisfactory, and requesting a formal release for France from her obligations under the Anglo-French treaty. * * * The House will naturally not expect me to say anything about the future. The situation at the present time is so uncertain and so obscure that it would be contrary to the public interests for me to attempt to pronounce upon it."

Now only America could save Britain. That was his battle—to win America. The key to his strategy—and it never changed—was set in his broadcast speed of July 14:

"We are fighting by ourselves, alone; but we are not fighting for ourselves, alone."

The idea of offering to the United States certain British bases in the Western Hemisphere was probably his own. Whether it was his own or not, it was, as he said, spontaneously British, and it made a great light. On August 20, he said to the House of Commons:

"There is, however, one direction in which we see a little more clearly ahead. * * * Some months ago we came to the conclusion that the interests of the United States and of the British Empire both required that the United States should have facilities for the naval and air defense of the Western Hemisphere * * * and that we should be glad to place such defense facilities at their disposal by leasing suitable sites in our trans-Atlantic possessions for their greater security. * * * Undoubtedly, this process means that these two great organizations of the English-speaking democracies, the British Empire and the United States, will have to be somewhat mixed up together in some of their affairs for mutual and general advantage. * * * No one can stop it. Like the Mississippi, it just keeps rolling along. Let it roll."

First, he said, there was no thought of quid pro quo, or at least no asking for it; yet down the Mississippi came quid in the form of 50 American destroyers, and this he announced to the House of Commons on September 5, thus:

"The memorable transactions between Britain and the United States which I foreshadowed when I last addressed the House have now been completed. * * * No doubt Herr Hitler will not like this transference of destroyers. I have no doubt he will pay the United States out if ever he gets the chance. That is why I am very glad the armed air and naval frontiers of the United States have been advanced along a wide arc into the Atlantic Ocean, and that this will enable them to take danger by the throat."

After that, for the duration of the Presidential campaign, and until the President has made his arsenal-of-democracy speech, Mr. Churchill was particular to refer to it always as the New World that was going to save England, as in a broadcast September 11:

"This wicked man * * * this monstrous product of former wrongs and shames * * * has lighted a fire which will burn with a steady and consuming flame until the last vestiges of Nazi tyranny have been destroyed, and until the Old World and the New can join hands to rebuild the temples."

And again to the House of Commons on November 21:

"I look to the time when the arsenals, training ground, and science of the New World and the Empire will give us that material superiority which, added to the loyalty of constant hearts, will surely bring us victory and deliverance to mankind."

But on January 9, this year, he said to the Pilgrims in London:

"If cooperation between the United States and the British Empire in the task of extirpating the spirit and regime of totalitarian intolerance * * * were to fail, the British Empire, rugged and embattled, might indeed hew its way through and preserve its life and strength for the inevitable renewal of the conflict. * * * But the chances of setting the march of mankind clearly and surely along the highroads of human progress would be lost and might never return. * * * I therefore hail it as a most fortunate occurrence that at this awe-striking climax in world affairs there should stand at the head of the American Republic a famous statesman, long versed and experienced in the work of Government, in whose heart there burn the fires of resistance to aggression and oppression, and whose sympathies and nature make him the sincere and undoubted champion of justice and freedom and of the victims of wrongdoing wherever they may dwell. And not less do I rejoice that this preeminent figure should newly have received the unprecedented honor of being called for the third time to lead the American democracies."

Introducing Harry Hopkins as the personal envoy of the President, Glasgow, on January 17, he said:

"Mr. Hopkins has come in order to put himself in the closest relation with things here. He will soon return and report to his famous chief. We don't require in 1941 large armies from overseas. What we do require is weapons, ships, and airplanes. All that we can pay for we will pay for, but we require far more than we will be able to pay for. And I watch with deep emotion the stirring processes whereby the democracy of the great American Republic is establishing its laws and formulating its decisions in order to make sure that the British Commonwealth is able to maintain, as it is maintaining at present, the front line of civilization and progress."

Then, while the lend-lease bill was pending in Congress, he said, February 9, in a broadcast speech:

"The other day President Roosevelt gave his opponent in the late Presidential election a letter of introduction to me, and in it he wrote out a verse in his own handwriting, from Longfellow, which, he said, 'applies to you people as it does to us.' Here is the verse:

"'Sail on, O ship of state!
Sail on, O Union strong and great!
Humanity with all its fears,
With all its hopes of future years
Is hanging breathless on thy fate.'

"What is the answer that I shall give in your name to this great man, the thrice-chosen head of a nation of 130,000,000? Here is the answer that I shall give to President Roosevelt: Give us your faith and blessing, and under Providence all will be well. We shall not fail or falter. * * * Give us the tools and we will finish the job."

On the coup d'état in Yugoslavia he said:

"We shall give all the aid we can. * * * I am sure that the President of the United States will be actuated by the same generous feelings. * * * According to the laws and Constitution of the United States—and, after all, as a great democratic leader he must move with the whole march of the Nation—I am certain that his sympathies and aid will also be extended in full measure to the Serbian people."

On the same day he spoke of peace aims:

"I am very glad to see that the illustrious leader of the American people, President Roosevelt, is of the same opinion, though in our correspondence the topic has never been mentioned. In speaking of the mission of his new Ambassador to this country, Mr. Winant—worthy representative of a great Nation at a crucial moment—President Roosevelt, when he was asked what instructions were given to the Ambassador about peace aims, replied that he did not see much use in speaking about peace aims until Hitler had been defeated."

After the lend-lease law was passed, the question was: Would the Americans let their aid be sunk in the ocean by Hitler? On that he said to the House of Commons, April 9:

"While I am hopeful we shall gain mastery over the air attacks upon our shipping, the U-boats and the surface raiders range ever farther to the westward, ever nearer to the shores of the United States, and constitute a menace which must be overcome if the life of Britain is not to be endangered and if the purposes to which the Government and people of the United States have devoted themselves are not to be frustrated."

And more to that point in a broadcast, April twenty-seventh:

"During the last year we have gained by our bearing and conduct a potent hold upon the sentiment of the people of the United States. * * * In that great Republic, now in much travail and stress of soul, it is customary to use all the many valid, solid arguments about American interests. * * * But in the long run, believe me, for I know, the action of the United States will be dictated not by methodical calculations of profit and loss but by moral sentiment and by that gleaming flash of resolve which lifts the hearts of men. * * * I could not believe that they would allow the high purposes to which they have set themselves to be frustrated and the products of their skill and labor sunk to the bottom of the sea. * * * When I said 10 weeks ago, "Give us the tools and we will finish the job," I meant, "Give them to us; put them within our reach." And that is what it now seems the Americans are going to do. * * * When you come to think of it, the United States are very closely bound up with us now, and have engaged themselves deeply in giving us moral, material, and within the limits I have mentioned, naval support."

After Greece, but before Crete, he said to the House of Commons:

"We must look to an immense construction of ships in the United States. * * * It may be that 1943, if we have to endure it as a year of war, may present easier problems. The United States patrol, announced by President Roosevelt, on which the American Navy and air force are already engaged, takes a considerable part of the Atlantic, in a certain degree, off our hands, but we need a good deal more help. I expect we shall get a good deal more * * * but here I speak with great caution because it is not for a British Prime Minister to forecast, still less to appear to prescribe, the policy of the United States. * * * So far in our relations with the great Republic * * * I do not think we have made any serious mistakes. When a mighty democracy of 130,000,000 gets on the move, one can only await full development of those vast psychological manifestations."

He was sure he knew his Americans. In a message to Rochester University on receiving a degree, June 16, he said:

"Here at least, in my mother's birth city of Rochester, I hold the latchkey to American hearts. * * * A wonderful story is unfolding. How it will end we are not allowed to know. But on both sides of the Atlantic we all feel—I repeat, all—that we are a part of it, and that our future and that of many generations is at stake. * * * United we stand. Divided we fall. Divided, the dark ages return. United, we can save and guide the world."

Hitler's sudden attack upon Russia created a political situation of extreme complexity. There was danger in it. How would the Americans like Stalin as a partner in the crusade for human freedom? On Sunday afternoon, June 22, before the American Government could speak, Mr. Churchill came on the air, saying:

"The third turning point was when the President and Congress of the United States passed the lease-lend enactment, devoting nearly two billions sterling of the wealth of the New World to help us defend our liberties and their own. The fourth is now upon us. * * * In another 6 months the help we are receiving from the United States in war materials of all kinds, especially in heavy bombers, will begin to tell. * * * It is not for me to speak of the action of the United States, but this I will say: If Hitler imagines that his attack on Soviet Russia will cause the slightest division of our aims or slackening of effort in the great democracies, who are resolved upon his doom, he is woefully mistaken. * * * His invasion of Russia is no more than a prelude to an attempted

invasion of the British Isles. He hopes, no doubt, that all this may be accomplished before the winter comes, and that he can overwhelm Great Britain before the fleets and air power of the United States will intervene."

His verge-of-war speech to the House of Commons, July 29, was a warning to the British to guard their speech and be mindful of what he was doing. He said:

"But apart from the circle where all the facts are known, outside in the United States, there is a vigorous campaign against the policy pursued by the President. I fear that harm has been done. * * * Sir J. Wardlaw-Milne said our people were only working up to 75 percent of their possible efficiency. * * * In America such a statement is meat and drink to isolationists. * * * The United States is giving us aid in a gigantic scale and is advancing in rising wrath and conviction to the very verge of war."

Then came his momentous meeting at sea with the President of the United States. In his report upon that, a speech that was broadcast on August 24—and much of it news to the American people—he claimed the battle, saying:

"* * * it was somewhere in the Atlantic. And there for 3 days I spent my time in company, and I think I may say in comradeship, with Mr. Roosevelt, while all the time the chiefs of staff and naval and military commanders, both of the British Empire and the United States, sat together in continual council. * * * We had the idea when we met there, the President and I, that without attempting to draw final and formal peace aims, it was necessary to give all people, and especially the oppressed and conquered peoples, a simple rough-and-ready wartime statement of the goal toward which the British Commonwealth and the United States mean to make their way. * * * The United States and Great Britain do not now assume that there will never be any more war again. On the contrary, we intend to take ample precautions to prevent the renewal in any period we can foresee, by effectively disarming the guilty nations. * * * You will perhaps have noticed that the President of the United States and the British representative, in what is aptly called the Atlantic charter, have jointly pledged their countries to the final destruction of the Nazi tyranny. That is a solemn and grave undertaking. * * * And of course many practical arrangements to fulfill that purpose have been and are being organized and set in motion. * * * The question has been asked, "How near is the United States to war?" There is certainly one man who knows the answer to that question. If Hitler has not yet declared war upon the United States * * * it is certainly not because he could not find a pretext. He has murdered half a dozen countries for far less. * * * If he can succeed in beating the life and strength out of us * * * then is the moment when he will settle his account, and it is already a long one, with the people of the United States."

Finally—for the present—the Canadian prime minister, speaking to the lord mayor's luncheon on September 4, asked that the United States give Britain such a guaranty as she gave to Canada 3 years ago—that we would not stand by if Canadian soil were threatened. And Mr. Churchill, indorsing Mackenzie King's words, declared that Germany could be beaten only by the full cooperation of all nations which "as yet lie outside the range of the conqueror's power. * * * I find further encouragement in the words of President Roosevelt last Monday when he said: 'I know I speak for the conscience and determination of the American people when I say that we shall do everything in our power to crush Hitler and his Nazi forces.'"

And there, in Mr. Churchill's grand words, is the story of the saving of England, the story of the evolution of American foreign policy as if you were reading it in a mirror, the story of how the United States became involved the second time in a war that was Europe's business—and a record of the most amazing singlehanded feat in the whole brilliant history of British diplomacy.

Freedom of the Seas and the Cost of War to the United States

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gen. Hugh S. Johnson:

ONE MAN'S OPINION

(By Hugh S. Johnson)

With true Japanese diffidence this miserable column respectfully thinks that the Honorable Frank Knox ought to have his honorable head examined. He says that this country should join with Great Britain for perhaps 100 years to dominate the ocean to insure freedom of the seas—and that this is an ancient American doctrine.

The ancient American doctrine bravely insisted upon by us, as a small neutral Nation, was that no naval power should interfere with our commerce on the high seas with other neutrals, or, except in case of an actual and effective blockade with our commerce, not in contraband of war, with a belligerent. In case of an actual effective blockade, we conceded, and we made even Britain concede in our War Between the States, that ships sunk in attempts to crash it created no cause for war.

What we objected to—and made our objection stick—was attempts to forbid commerce on the seven seas by paper declarations to prevent our ships from carrying on their normal commerce. In other words, we objected to any dominion of all the oceans such as the Honorable Knox now advocates for us and Great Britain. His is a complete reversal of our principles and our doctrine.

If we, with Britain, are now to undertake to police the world, what is it going to cost and who is going to pay for it? You don't need to ask twice. It is going to cost, within a few years, more than all the wealth accumulated on these shores since Christopher Columbus, and we and our children are going to be charged with it.

Of course, neither we nor they can pay for it.

What Honorable Knox proposes is American bankruptcy—but think what a magnificent gesture it is. One would think he were again running—this time for Vice President of Great Britain. Of course, there isn't any such office and, if there were, the canny British wouldn't elect such a squanderer of national substance.

The war adventure on which we are already embarked has no limit in cost. I know that the recent chamber of commerce figures are right when they say that our tax burden is or soon will be greater than that of the British—and we have just begun to tax, spend, and incur debt.

The bearings of these taxes, priorities, and debts, and of the inflation that will go with them, on our people has scarcely been guessed, and there is no real attempt to guess them. But there are enough facts already in sight to be sure that they will be beyond endurance. This unplanned reckless destruction of our national heritage is as sure as sunrise to react on its authors with poisonous popular resentment.

This generation will have on its shoulders a reproach from its children that is almost unanswerable. We received in this country a heritage from generations of sweat and blood and tears of our forefathers, the richest on earth. It was safe, secure, almost free from debt, and with the highest standard of living ever known on earth.

We are passing it on after a few short years of experimentation and adventure, shattered in solvency, burdened with debt, and unauthorized assumption of responsibility from the welfare of the whole cockeyed world, terribly entangled, ruthlessly ruined.

It wasn't all because of Hitler. Much of it was done earlier. We have squandered, or are on the verge of squandering, our children's birthright for generations in scarcely 15 years. There must be a limit somewhere, and it is high time to find out where it is.

Prof. Max A. Scoli

LETTERS ANSWERING ATTACK ON CONSTITUENT

Mr. BALDWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters refuting an unjust attack on a friend and constituent of mine:

JULY 21, 1941.

HON. SAMUEL DICKSTEIN,
House Office Building,
Washington, D. C.

DEAR MR. DICKSTEIN: It is not my desire to enter into any sort of controversy with you on general political or ideological issues, I wish merely to offer a personal opinion, based on a considerable period of observation that your statements in the CONGRESSIONAL RECORD of June 17, 1941, regarding Prof. Max Ascoli, are on their face unlikely to be true, and that I very much doubt whether they can be supported by any acceptable evidence. If you do indeed have any evidence that he is a covert Fascist or Communist, it would be so contrary to his long record of written and spoken opinion that it ought to be made public in detail at once. Similarly, if he or his associates have made any libelous statements or accusation against you or your friends, legal proceedings should at once be initiated in the courts in accordance with American law and American custom.

I might add that many of Professor Ascoli's friends and associates have made definite sacrifices for the cause of liberty and democracy such as you and I have not yet been called upon to make, and I think it distinctly ill-fitting that a Member of Congress who must be particularly on the alert to fight any spread of intolerance and bigotry should indulge in vague innuendos and unsupported

charges tending to arouse suspicion and hate against American citizens of foreign birth. This is especially unfortunate when, as in the present case, the person attacked enjoys, and, I believe, deserves the confidence of substantial and well-informed elements in our country.

Yours very truly,

HAMILTON FISH ARMSTRONG.

BURLINGHAM, VEEDER, CLARK & HUPPER,
New York, July 11, 1941.

Hon. SAMUEL DICKSTEIN,
House Building, Washington, D. C.

DEAR CONGRESSMAN: I have read your speech reported in the CONGRESSIONAL RECORD of June 17 in defense of Mr. Generoso Pope and criticizing Prof. Max Ascoli and the Mazzini Society, of which he is president. I do not know Mr. Pope. I read Italian with some difficulty, but I have seen several articles in his two papers, and I believe it is true that these papers suppressed certain parts of President Roosevelt's radio address, which I consider unethical and unworthy of an honest newsaper.

Prof. Max Ascoli I know well and have known for 10 years and more. He is a man of the highest character and standards and ideals; and with all respect to you as a Representative of this city in the Congress, I resent your charging him or the Mazzini Society with stirring up false allegations against Mr. Pope. I have read their organ, Il Mondo, and I see nothing slanderous or improper in it. I know several of the founders of the Mazzini Society and know them to be men of fine character, and you may be assured that there is nothing Fascist about them or their society or their paper.

Very truly yours,

CHARLES C. BURLINGHAM.

WASHINGTON, D. C.

Mr. ULRIC BELL,
Chairman, Executive Board of
Fight for Freedom Committee, Inc.,
New York City, N. Y.

MY DEAR MR. BELL: I have your letter of July 2.

I should have thought it unnecessary to deny any allegations that Max Ascoli had sympathy for Fascist or Communist activities. Ascoli left Italy during the early days of the Mussolini regime because of disagreement with the principles of fascism. Since he has been in the United States he has been a member of the graduate faculty of the New School for Social Research. To be a member of this faculty under the leadership of Alvin Johnson is a guaranty in itself of liberal views and of antagonism to anything like fascism or communism. I think I am correct in saying that the only restriction imposed upon a member of the graduate faculty is that he shall not be a member of any organization which pretends to dictate to its members what they should think about political or other questions. If it is necessary, I can add my own testimony, based on a long friendship with Ascoli, that he is a true and, I believe, great liberal and a thorough supporter of American democracy and the American way of living.

Sincerely yours,

THOMAS K. FINLETTER.

JULY 8, 1941.

Representative SAMUEL DICKSTEIN,
House of Representatives,
Washington, D. C.

DEAR MR. DICKSTEIN: I am simply horrified at reading an excerpt of a speech of yours which appeared in the CONGRESSIONAL RECORD of June 17. In it you attack the Mazzini Society in which you say that it is Fascist, and you particularly pick out Professor Max Ascoli and say that he is of a questionable background as to political maneuvering abroad and you accuse him of political communistic propaganda. This is an outrageous statement.

I have known Professor Ascoli for years. He is one of the most virulent anti-Communists I know. He is absolutely anti-Fascist and has written any number of articles in leading magazines, as well as a book on fascism which makes his position absolutely plain. He is a distinguished political scientist and there is nothing whatever about his political background which is questionable. He was a college professor in Italy for several years after Mussolini came into power and tried to lead a quiet university life, and yet, for his activities among students, was finally put into prison, was dismissed, and came into this country through the efforts of the Rockefeller Foundation if I recall correctly.

I am sure that you do not wish to blacken the reputation of a man about whom you obviously know very little, and it is also perfectly clear that you know nothing about the Mazzini Society—that you have not been reading its publication. I gather, too, that you have not read Mazzini, for, if you had, I am sure you would realize that no Fascist society would take Mazzini as a leader.

I do not know any members of the Mazzini Society who have held high official positions under fascism, but I do know that Professor Ascoli never held any. I beg you for your own good name to make good this totally unjustified charge. Professor Ascoli is an American citizen—a naturalized one, Mr. DICKSTEIN—as your ancestors also were.

Somebody has been taking you for a ride.

Sincerely yours,

DOROTHY THOMPSON.

THE NEW SCHOOL FOR
SOCIAL RESEARCH,
New York, July 7, 1941.

Mr. ULRIC BELL,
Fight for Freedom, Inc.,
New York, N. Y.

DEAR MR. BELL: I have your letter of July 2 with the excerpts from Congressman DICKSTEIN's speech reflecting on Dr. Max Ascoli, dean of our graduate faculty.

Congressman DICKSTEIN is strangely misinformed as to the character and political position of Dean Ascoli. Prior to the advent of the Fascist regime in Italy, Professor Ascoli held respected academic positions in Italy. Being essentially a traditional Democrat he naturally found the Fascist regime intolerable, and came to this country as a Rockefeller fellow. It may be noted that if his record had not been flawless he could not have got a fellowship, nor could he have gotten visas enabling him to come to America. Since coming as a visiting student he has again been subjected to the tests of meeting the requirements of a permanent visa and of citizenship.

Ascoli has been a member of our graduate faculty for 8 years. He has not been involved in any group or movement that is inacceptable to any loyal American. His political position is one of ardent support of American democratic institutions.

It is possible that Ascoli's judgment of Generoso Pope is wrong. There can be no question that Congressman DICKSTEIN's judgment of Ascoli is utterly wrong.

Yours truly,

ALVIN JOHNSON, *Director.*

JULY 10, 1941.

I have just read the speech of Representative DICKSTEIN in the CONGRESSIONAL RECORD of June 17, defending Mr. Generoso Pope of the charge of Fascism, but attacking the Mazzini Society, and particularly its president, Dr. Max Ascoli. I do not wish to enter this controversy except to protest against this ill-mannered and unfounded attack upon Dr. Ascoli, whom I have known for many years. Nothing could be more untrue than to accuse him of being a Fascist as well as a Communist, as Mr. DICKSTEIN does at least by innuendo. Dr. Ascoli is a sincere scholar and teacher who is making a distiguished contribution to American democracy and intellectual life. It is highly regrettable that the floor of Congress should be used for such personal attacks. Representative DICKSTEIN, in my opinion, owes Dr. Ascoli an apology.

RAYMOND LESLIE BUELL.

American Mothers Organization Opposes Entry of United States Into European War

---

EXTENSION OF REMARKS
OF
HON. JOSEPH J. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

LETTER FROM AMERICAN MOTHERS ORGANIZATION

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

AMERICAN MOTHERS ORGANIZATION, U. S. A. HEADQUARTERS,
Point Pleasant, N. Y., September 29, 1941.

UNITED STATES CONGRESS
(In care of Hon. JOSEPH J. O'BRIEN, *Thirty-eighth District, New York State*).

GENTLEMEN: The American Mothers Organization of the United States of America with headquarters in Point Pleasant, N. Y., through its president, Mrs. Mabel McCormick, of 458 Peart Avenue, Point Pleasant, N. Y., request that you cause to have read into the CONGRESSIONAL RECORD immediately the following remarks:

We, the American Mothers Organization of the United States of America oppose entry of the United States of America into any foreign war.

We oppose the sending of any of our armed forces to police or fight on foreign soil.

We are opposed to the order given our Navy by the President "to shoot on sight."

We are opposed to "aid to Russia."

We are opposed to the levying of taxes against American citizens to furnish arms and supplies to a foreign nation where we have no voice in their government and which is, as in revolutionary times, "taxation without representation."

All actions of our President to the present time seem proof enough that our President is bent upon the absolute destruction of our form of government and our way of life, and upon the utter enslavement of our people by piling up a huge national debt, which is bound to lower the standards of living in these United States of America and eventually cause a turn to totalitarianism as the only way out.

Therefore, we American mothers demand that the Congress of the United States of America take drastic action to preserve our American form of government, even if such action must be "the impeachment of the President."

We are all 100-percent Americans and we want a leadership which will show real action and dare to come cut and say, "We will not be an arsenal for any country but our own. We have not entered and will not enter the wholesale murder business."

For such leadership, together with more drastic action, we naturally look to the members of Congress for the intelligent leadership which we hopefully seek. We beg of you not to cause us mothers to loose faith in you.

Respectfully yours,

AMERICAN MOTHERS ORGANIZATION,
MABEL MCCORMACK, *President.*
MRS. CHAS. WHALEN, *Vice President.*

The Harry R. Bridges Case

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. LELAND M. FORD. Mr. Speaker, I certainly do, and I believe that many thousands of the people of the United States, hail the decision in the Bridges case with satisfaction and confidence. All of these people know of the subversive activities of Harry Bridges and I believe it is, therefore, useless to recount them, but I do think that there is one point that should be strongly stressed, and that is, that justice has finally prevailed.

In this day of laxity in law observance and law enforcement, many had come to the conclusion that a general breakdown of all law and order was unavoidable and evident. This decision, however, should destroy that destructive philosophy and add to the constructive philosophy of those who believe in law and order.

There was great talk of the political pressure that was brought about to save Bridges; much talk about the question of withholding evidence in order to save him. This came while the case was under the jurisdiction of Madam Perkins. The people knew of the activities of this man, particularly those who live in California, and viewed the proceedings under Perkins' Department with suspicion and lack of confidence, particularly with the C. I. O. tie-up that was said to prevail there. They were about to lose confidence in the enforcement of the provisions of the Constitution of the United States and in the enforcement of law and order. It is my belief that they will begin to have their confidence restored in the old maxim, "Justice will prevail." This justice will prevail where someone is interested enough to see that it does. My belief in this is one of the reasons why I was so actively interested in seeing that Harry Bridges was brought to justice.

Now that the decision is brought in by such an able judge as Charles B. Sears, confidence will again be restored in the institutions and laws of the United States. I believe, and many others believe, that Harry Bridges was the most flagrant violator of law and order, and that his activities did more to destroy our defense program than did any one man in the United States. Now he will be held accountable, as he should be.

This case, however, does not end here. Judge Sears was appointed to find certain facts, namely, whether Harry Bridges belonged to any organization, association, society, or group that believed in, advised, advocated, or taught the overthrow by force and violence of the Government of the United States, and whether he aided by circulating, distributing, publishing, and so forth, the teachings of this subversive philosophy to overthrow by force and violence the Government of the United States.

Judge Sears decided fact No. 1, that Harry Bridges did belong to an organization of this character. The second fact that Judge Sears found was that the Communist Party in the United States was a party that, from the time of its inception to the present time, believed in, advised, advocated, and taught the overthrow by force and violence of the Government of the United States.

Judge Sears' assignment was to find these facts for the Immigration and Naturalization Service, Department of Justice.

This is not final. Director Wixon, of the Department of Immigration and Naturalization in California, will now receive this finding of facts and then will make his recommendation to the Department of Justice here, Immigration and Naturalization Service, under the jurisdiction of Attorney General Biddle. This case will finally be heard for the Attorney General by the Board of Appeals. That will be the final decision so far as Harry Bridges and this Department are concerned.

No doubt a court fight will be on, with habeas corpus proceedings, and so forth, in which an attempt will be made to undo and override the Department of Justice decision to deport him if such a decision is made and order issued by Attorney General Biddle.

No one would deny Bridges or anyone else his constitutional rights, although Bridges would deny them to millions of others, but it is hoped by many that these proceedings will not be dragged out over a series of years in order that this alien, with such ideas as he has, may remain in this country and remain active while court proceedings and hearings are held. This case is important enough so that without denial of any rights it should be brought to a speedy wind-up. There is no question in the minds of many lawyers but that the Department of Justice has the power already, under laws prevailing, to deport Bridges forthwith. However, in any event, Harry Bridges should not be left to run at large and carry on the activities that he has been carrying on. If not immediately deported, Harry Bridges should be confined and his activities stopped until the final outcome of this case is had. This ought to follow in a case of this kind. Harry Bridges has been the man at whom the finger could be pointed more than any other man in this country, as a destroyer of the defense program of this country, and during times like this should not be left to run at large and continue his destructive program.

I congratulate Judge Sears, the F. B. I., the Department of Justice, and particularly Major Schofield in this department for the successful presentation of their case, and I hope they will be equally successful in their efforts to bring about the deportation of this man, who has had no business to have remained here as long as he has.

Use of Ether as an Anesthetic

EDITORIAL FROM THE ROME (GA.) NEWS-TRIBUNE

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rome (Ga.) News-Tribune:

[From the Rome (Ga.) News-Tribune]

THE MISTAKE LIVES ON

It is disheartening to win a point before the entire Nation and then have some fellow who has been slumbering through the controversy to pop up and put on public record the original error that was supposed to have been corrected.

The Honorable SAMUEL A. WEISS, of Pennsylvania, is the latest gentleman to arise from fog of the past and advance as authentic information a fact which had been publicly set to rights for, it was hoped, all time.

In an extension of his remarks in the CONGRESSIONAL RECORD, Representative WEISS submitted historical highlights for September and listed the following:

"September 30: Dr. William Morton makes first successful use of ether as anesthetic in 1846."

Had Representative WEISS taken the time and trouble to look in the Capitol's Hall of Fame, he would have seen a marble likeness of Dr. Crawford W. Long, of Georgia, who, says Evans' History of Georgia, "is now recognized as the discoverer of the anesthetic power of sulfuric ether."

On March 30, 1842 (4 years before Morton's use of ether), Dr. Long performed an operation at his office in Jefferson, Ga., to remove two tumors from the neck of James M. Venable. Says Evans' History of Georgia: "Knowing that ether had deadened the pain of injuries received in the frolics, the young man agreed that Dr. Long might remove one tumor if he be allowed to inhale ether. The tumor was removed and the patient felt no pain. This was the first surgical operation ever performed with the patient under the influence of the pain-deadening vapor. On June 6, 1842, the other tumor was removed in the same painless manner. On July 3, 1842, Dr. Long amputated the toe of a Negro boy, and September 9, 1842, removed a tumor from the head of a woman, without pain to the patients."

Dr. Long, a modest man, sought no credit for his discovery, and 4 years later read in a medical journal where another man, Dr. Morton, had hit upon the same idea and was being credited with its discovery. The matter stood at that point until years later when

Georgians pushed Dr. Long's claim to the discovery and obtained national recognition for the Georgian who, in his life, was content merely with the knowledge that he had helped humanity along the way.

It is hoped the Members of the Georgia delegation in Congress will not let the error in Representative WEISS' "historical highlights" pass unchallenged.

One Hundred and Fiftieth Anniversary of the Founding of the City of Knoxville

EXTENSION OF REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

ADDRESS BY HON. E. E. PATTON

Mr. JENNINGS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of Senator E. E. Patton, of Knoxville, Tenn., on the celebration of the one hundred and fiftieth anniversary of the founding of the city of Knoxville, Tenn., in accepting a flag of the United States, Tennessee, and the city of Knoxville, presented by the Morris Plan Bank of Knoxville to the Blount Mansion, delivered at the Blount Mansion on August 28, 1941. Senator Patton is a distinguished citizen of Knoxville and an eminent historian.

The address follows:

Madame President, invited guests, ladies and gentlemen, I want to express my appreciation of your courtesy in giving me an opportunity to accept, at the hands of one of Knoxville's progressive financial institutions, these emblems of our Nation, our State, and our city. It is a most gracious gift and should be appreciated by every loyal Tennesseean, every worthy citizen of Knoxville and every patriotic American.

First, I want to congratulate the citizens of this country on their right and privilege of meeting on an occasion of this kind. In far too many of the countries of the world, it would be necessary to get a permit from the dictator to hold a meeting of this character and then, perhaps, an armed guard would be at the door. We hate no race; we merely despise and loathe the actions of their dictators and despots.

Standing in New York Harbor is the Statue of Liberty, on whose base are carved these words:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore,
Send these, the homeless, tempest-tossed to me:
I lift my lamp beside the golden door."

For more than a century we gave welcome to the huddled masses, the wretched refugee, the homeless; to the tired, the poor, the tempest-tossed; some of them came in the God-given spirit of high and holy adventure; they obeyed our laws; they respected our institutions; they swore allegiance to our flag; and they kept the faith. Those we welcomed.

Unfortunately, some of the huddled masses came to defy our laws and to overturn our Government. We welcome no such characters and we warn them to return to their own teeming shores at their first opportunity, and we shall undertake to make it convenient for them to depart without any word of benediction.

Henry Ward Beecher said that when we gaze upon a nation's flag we see not the cloth merely, but back and beyond the bunting or the silk we see the aims, purposes, struggles, the worthy ambitions, and the aspirations of the people themselves; that is what a flag typifies and represents. We do not need to apologize for ours. It stands for liberty and freedom.

Gazing today on the beautiful flag of our country, we see the meeting of the First Continental Congress on that fateful day in 1774; we hear the debates over the adoption of the immortal Declaration of Independence, the first document in the world to asser that the right of government is inherent in the people—that document penned by that valiant young Virginian, Thomas Jefferson. We are present at Cambridge, when Washington took command of the ragged armies of the new Republic.

We hear the hoofbeats of Paul Revere's horse as he galloped toward Concord and Lexington with the stirring news that the red coats were on their way. We are with Washington at Valley Forge, when his spirits were at their lowest ebb, when he sought help from the God of battles and of nations. In our vivid imagination, we march with Campbell, Cleveland, Shelby, and the knightly Sevier as they wend their silent way through the mountain fastnesses, under the friendly stars, toward King's Mountain and deathless glory.

We are present when the brave Britons—for they were brave men—laid down their arms at Yorktown, thus forever guaranteeing the liberty, the freedom, the independence of our own America. But back of this we can see Washington and his committee, as they visit the modest little shop of Betsy Ross, the Quakeress, whose name and fame will forever be enshrined in our national heart as the fashioner of Old Glory, to me, the greatest and the most beautiful flag kissed by Heaven's breezes. God grant that it shall never be lowered, God help us to keep it pure, undefiled, and unsullied by any "ism," that only Americanism shall be its watchword and its guardian.

One hundred and fifty years ago, William Blount, the first governor of a national territory, appointed by a President of the United States, left his palatial and comfortable home in the old north State, and rode horseback across the Alleghenies to establish his capital on this sacred spot. What hallowed memories are around and about us. Just across the street met that group of distinguished men who framed our first Constitution, pronounced by Jefferson as the most democratic constitution in the world.

Here we see the evolution of our State government, with a population, in 1796, of 65,000; in 1941 of 2,910,000, with resources and scenery the envy of our neighbors and the pride and delight of ourselves and our visitors. We see this State furnish three Presidents—Jackson, the first from west of the mountains; Polk, whose administration, measured by its results, the most brilliant in our history, and Andrew Johnson, that tribune of the people, the man, and the only man, in America who did not change his views regarding the right of a State to withdraw, peacefully or belligerently, from the Federal Union of our Fathers, and who, in calm contemplation of death, requested that his head be pillowed on the Constitution and that his body be wrapped in the sacred folds of the American flag.

We see John Catron, of Tennessee, as the first member of the United States Supreme Court from west of the mountains; we see John H. Eaton, who married Peggy O'Neal, the "Gorgeous Hussy," as the youngest man ever to hold a seat in the United States Senate, Time magazine, to the contrary notwithstanding; and Wm. Charles Cole Claiborne as the youngest man, by many months, to have a seat in the House of Representatives. We see this State furnish the greatest hero in the War between the States—Sam Davis, a brave young Confederate; we see the Old Volunteer State furnish the greatest hero of the first World War—Alvin Cullom York.

When we see the flag of Tennessee or the Nation, we think of David G. Farragut, the first admiral of the American Navy, born within 12 miles of this city. We see Mathew Fontaine Maury, the Pathfinder of the Seas, and the creator of our present Weather Bureau. Farragut followed the Stars and Stripes; Maury gave allegiance to the Stars and Bars. We see Albert Gleaves, son of a Federal, and Wm. B. Caperton, son of a Confederate, both sons of Tennessee, on the retired list of full admirals at the same time—a record never equaled by any other State in the Union.

But why go on? The list is too long to repeat; it would require hours merely to recite their names, to say nothing of their glorious deeds and daring exploits on the field of battle and their triumphs in legislative halls.

One hundred and fifty years ago we see Gen. James White, a North Carolina hero of the Revolution, cross the mountains and build his cabin and his fort on the site of the present city of Knoxville. With the exception of a few scattered settlements, all of this vast domain was an uncharted and unsettled wilderness. It took men of iron, with hearts of steel, to leave the civilization of Maryland, the Carolinas, and Virginia and meet the fierce and savage red men of the forest and match wits with those wily sons of battle. And, lest we forget, let's pay our meed of praise and tribute to the women who came with their husbands and fathers. They endured all the hardships and braved all the dangers of the frontier in order to establish a Christian civilization in the wilderness.

Today we stand on sacred and holy ground, sacred because of the blood our ancestors shed in order that we may be free from dictators and despots. From the noble deeds of our forefathers we should take renewed courage. The battlefields of the Revolution and of Tennessee have been hallowed by the blood of heroes, as Mr. Lincoln said, "far above our poor power to add or detract." "He who saves his country saves all; and all things saved do bless him; but he who lets his country die, dies himself, and all things dying do curse him." God forbid that we should be listed with those who let their country die.

As our ancestors stood upon the ramparts of liberty and gave battle to their country's foes, so let us stand today in the light of the history of their sacrifices, resolved to die, if necessary, that our country shall continue in her paths of peace, progress, and prosperity; of ordered government, with liberty and justice for all.

In the spirit of Washington and Betsy Ross; by the blessings of William Blount, Gen. James White, Col. Charles McClung, Gov. John Sevier, and all of their compatriots, let us here highly resolve that this Nation "shall have a new birth of freedom, founded under the benign spirit of the true God; that it may be a nation 'of the people, by the people, for the people' until time shall be no more."

And now, in the name and on behalf of this splendid association of brave, loyal, devoted, and patriotic women, I accept these

flags at the hands of their beneficient donors; and may God bless and save America.

We Knew What We Were Doing, Mr. President

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. VORYS of Ohio. Mr. Speaker, as a part of the attempt of this administration to change its own neutrality law because it has been too successful in keeping us out of war, the President has said that Congress retained the arms embargo in 1939 because Congress believed there would be no war, and that for this reason the President could not keep the war from starting. The record will show:

First. That Congress knew that war was imminent when it retained the Arms Embargo; and

Second. That it was the promise of repeal of the Arms Embargo, not the fact of its retention, that may have precipitated war.

In Colliers on October 4, 1941, the President says:

> The refusal on the part of the Congress to repeal the arms embargo was based in part upon the belief by practically all the Republican membership of the Congress and about 25 percent of the Democratic membership that there would be no war in 1939.

This statement is untrue. The fact is that when the House of Representatives passed the so-called Bloom neutrality bill containing the Vorys amendment providing for an arms embargo on June 30, 1939, the House believed that war was imminent—that war might start in 2 days, and in spite of this, the House retained the arms embargo. The headlines of the Washington press and the speeches of Members of Congress bear this out. The fact that the threatened crisis passed does not prove that retention of the arms embargo prevented war at the time, but it also does not prove that it precipitated war months later.

Here are headlines from the Washington papers of those days.

June 28, 1939:

Washington Star: "Daladier foresees gravest crisis in 20 years for France."

Washington News: "Tense Europe fears Danzig grab near." Under this headline appears these words: "Report piled on report that Hitler is ready to grab the free city of Danzig, possibly this week end."

Times-Herald: "Poles shoot down German warplane in Danzig region." "Britain, France put armies on war footing."

Washington Post: " 'Three million men at France's throat,' says Daladier." "Premier unexpectedly adjourns Parliament in order to free his hands for crisis."

June 29, 1939:

Washington Star: "Tripower warning to Reich on Danzig urged in France." "British, anticipating crisis, seek further reserves increase."

Washington News: "Polish citizens swear to fight for Corridor." "Danzig arms—invasion means war." "Experts say crops won't delay Hitler." "Churchill warns Hitler Britain can't retreat."

Times-Herald: "Warsaw to parade armed might today." "'Der Tag' set by Hitler for next Saturday, says report." Editorial heading: "Second World War has begun."

Washington Post: "Nazi showdown over Danzig reported near."

June 30, 1939 (the day the Vorys embargo amendment was adopted):

Washington Star: "Daladier summons Cabinet to weigh heightening crisis." "Halifax warning held gravest since war."

Washington News: "Hitler to visit Danzig." "Parade in Berlin follows Halifax warning to Nazis."

Times-Herald: "Ready for war at once, Hitler told by Britain." "Halifax threatens to use 'whole force' in event of new aggression by Fuehrer." "Nazis rush guns, troops to Danzig."

Washington Post: "Hitler told British would meet force with force." Editorial heading: "Eyes on Danzig."

This tension was reflected in the House debates on June 30. Speaker Bankhead took the floor and said:

> But look abroad in other parts of the world and what do you see? You see the tramp, tramp, tramp of marching arms. Every account that you see, particularly from Europe, deals with the preparation for some impending conflict at arms.
>
> Answer this question—where tonight or tomorrow, in what countries of the world war will be started, if at all?

Representative FISH said:

> You can almost hear the beatings of the wings of the angel of death as she hovers over England, France, Germany, Italy, and Poland tonight. * * * They are on the verge of war.

Our present Speaker, then floor leader, RAYBURN referred to our actions "in crises."

Representative JOHNSON of Texas, of the Foreign Affairs Committee, said:

> Failure to repeal the arms embargo * * * may mean the outbreak of another war.

On page 1 of the Times-Herald on June 30, 1939, was this headline "United States peace bid hinted—London hears persistent rumors Roosevelt would lead world parley."

I had argued to the House on June 30, 1939, that the President wanted repeal of the arms embargo to throw us into the balance of power in Europe, and that the danger from this was twofold:

First. No one could tell whether this would stop war.

Second. If war started, we would be forced to go in.

On June 30, 1939, I said:

> If you want to give the President the chance to take that desperate gamble of throwing our weight into the balance of power in Europe, then vote for this pending amendment (to strike out the arms embargo).

This record of what the newspapers said and what Congressmen on both sides of the debate said shows that Congress knew war was imminent and was determined to keep out of it. The war did not start that fateful week end, even though we had been told that retaining the embargo might mean war abroad. The war started 2 months later, when the President had in all probability convinced Britain and France that he could obtain repeal of the arms embargo, and they launched into a war for which they were unprepared. We in the House of Representatives knew what we were doing in the summer of 1939, Mr. President. Did you?

Let's Have Some Economy

EXTENSION OF REMARKS

OF

HON. BENJAMIN JARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

EDITORIAL FROM THE FRANKLIN (PA.) NEWS-HERALD

Mr. JARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial appearing in the News-Herald, Franklin, Pa.:

[From the Franklin (Pa.) News-Herald of September 30, 1941]

LET'S HAVE SOME ECONOMY

The record-breaking tax bill that Americans will have to pay this year emphasizes once again the immediate need for economy in Government expenditures. Substantial cuts can be made in nondefense items, providing pork-barrel politics can be forgotten long enough to permit them to be made.

Many Americans fail to realize that nondefense spending has doubled within the past 10 years. Every year since 1931 Washington has spent more money than it has collected. Today's rate of tax collection is double that of the peak of the World War period. Untold billions of defense spending are being piled on a tremendous level of civil spending. These nonmilitary expenditures have only been reduced by a comparatively few millions since the emergency began—and this in spite of the fact that millions of people recently unemployed are now working. The Government debt has reached gigantic proportions and is steadily going up.

This debt has a tremendous effect upon the standard of living of every one of us. Today the average person pays about 25 percent of his income in direct and indirect taxes. Every wasted dollar—every unnecessary expenditure—means that he has to pay more money to the Government. It means that he has that much less to spend for the necessities and luxuries that every American family needs and wants.

Today, when the rest of us are pulling in our belts to help pay for the defense program that we must have, it's time to insist that Washington pull in its belt, too.

In the past it has had considerable experience in plowing under pork. Why not plow under the pork barrel now?

Inflation is mounting along the same lines it pursued in 1917 and 1918. Not mere newspaper paragraphs, but actual charts drawn by experienced statisticians provide this proof. Meanwhile, the little old bank roll is only a shadow of its former self.

4-H Club Work—H. R. 4530

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. FULMER. Mr. Speaker, under leave to extend my remarks, I am inserting a letter which I received from Mr. E. S. Grover, store manager, Sears, Roebuck & Co., Gloversville, N. Y., written me concerning the merits of H. R. 4530, providing funds for the purpose of extending and enlarging 4-H Club work.

I want to call your attention to the last two paragraphs of this letter, because they bear out the real facts as to the merits of the 4-H Club work program.

We are spending millions annually for the purpose of educating farmers. We have been doing it for many years. However, up until the present agricultural program was put into operation we did not get much results.

Under the present program, where we are giving subsidies to farmers to do that which they should have been doing all along, we are getting real results; for instance, in soil building, increasing production, and the growing of better types of farm products.

Look at the increased cotton poundage per acre and the improvement in the length of staple.

This line of work prepares boys and girls to enter into their farming operations on a successful basis gained out of their actual experience in properly doing things; that is, what it means to operate a farm on a good, sound basis, and in proper grading and proper marketing their farm products.

I fully realize that there will be those who oppose this legislation on the grounds that we must not spend any money at this time unless it is used in building our national defense program.

May I state that unless we are able to build a prosperous and successful agriculture there is not a possible chance to build a well-balanced and successful national-defense program.

We propose to hold hearings on this bill at a later date, and I am hoping that each and every Member of Congress will become acquainted with the type of work which these boys and girls are doing today, which tends to keep them on the farm, and which will put them in a position to take their proper place in defending our democracy and our American way of life.

The letter follows:

GLOVERSVILLE, N. Y., *September 25, 1941.*

Hon. H. P. FULMER,
House of Representatives,
Washington, D. C.

DEAR MR. FULMER: I understand there pends House bill 4530, providing funds for 4-H Club work.

The political preliminaries to the passage of this bill are unknown to me. If the time spent in promoting its passage interferes with the supreme defense effort necessary, disregard this letter.

But if its passage is fairly likely, please consider the following paragraph from one who has been close to all kinds of youth work in four different States.

The 4-H, unlike any other youth program, builds into older boys and girls a practical foundation for practical farm life and service. Through the use of projects and achievements it hastens the day when these young men and women will become the farm leaders of America.

I have never seen any money wasted or time lost or detours made by the 4-H leaders. They furnish their members with the material and advice, and progress has to be made, or else.

Yours truly,

E. S. GROVER,
Store Manager, Sears, Roebuck & Co.

Will an A. E. F. Be Necessary To Crush Hitler?

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

ARTICLE BY EDWARD T. FOLLIARD

Mr. MICHENER. Mr. Speaker, this country has been approaching involvement in the World War a step at a time. In the beginning those favoring these steps indignantly protested that there never would be another A. E. F. fighting in Europe. By the step-at-a-time method the country has now reached that stage where the probability of an A. E. F. is receiving consideration.

Yesterday's Washington Post contained an article by the factual writer, Mr. Edward T. Folliard, which is most interesting and worth while. Pursuant to the permission granted to me, I include this article, which is as follows:

[From the Washington Post of September 5, 1941]

WILL AN A. E. F. BE NECESSARY TO CRUSH HITLER?

(By Edward T. Folliard)

Will another A. E. F. be needed to crush Nazi Germany? Or will it be possible for America to wage a "cheap war"?—cheap, that is, from the standpoint of casualties.

Nobody can answer these questions with any degree of certainty today. There are too many imponderables as the war goes into its third winter, with the Germans and Russians locked in the greatest battle of all history. One thing can be said, however, and that is that the best military opinion—meaning particularly the opinion of British Generals Wavell and Auchinleck—holds that another A. E. F. will be necessary.

What American military leaders think must remain unknown to the public, at least for the time being. They are not talking for publication. Instead they are training an American Army, and training it to combat just such a military power as Adolf Hitler is now throwing against Russia. It is not likely that they expect Hitler to bring that Wehrmacht of his over to the United States mainland.

The question of whether an A. E. F. will be needed is pertinent at this time because of the attitude of the American people, as reflected by the Gallup poll.

A majority of Americans, judging from this poll, are determined to see Germany defeated, and they apparently agree with President Roosevelt that "the only peace possible with Hitler is the peace that comes from complete surrender." With that thought in mind, they have been moving more and more over to the interventionist side.

They favor convoys, they approve the President's "shoot on sight" order to the Navy, and they want the Neutrality Act revised. But they do not want to "enter the war," if entering the war means sending another A. E. F. abroad.

RECIPE FOR VICTORY

President Roosevelt, it is said, hopes that in some way Hitler can be defeated without the employment of another A. E. F.

Six months ago, according to talk heard around Washington, President Roosevelt and Prime Minister Churchill were counting on these things to pave the way for a German defeat: The naval blockade, vastly increased bombardment of Germany from the air, uprisings among the conquered peoples of Europe, and a crack-up of German morale.

The one important thing lacking in this recipe for victory was a weakening of the great German army—what the military men call "attrition." Then, on June 22, came Hitler's attack on Soviet Russia, and the process of attrition began. It is still going on.

Some observers say that the question of whether another A. E. F. will be needed is now being answered in Russia. They apparently believe that the German army will be terribly weakened in Russia, and that therefore no Yanks will be needed overseas again. But the British military leaders do not agree with them.

What is the most that is expected of Russia? Is it not that Russia will do to Hitler what it did to Napoleon—make him realize that Russia, with her vastness, simply cannot be conquered?

Well, suppose that this did happen. There would still have to be a Waterloo for Hitler, just as there was for Napoleon, three years after his Russian adventure. Would the British be able to swing this by themselves? They didn't do it alone in 1815, and they don't expect to do it alone this time. Generals Wavell and Auchinleck are quite frank about this.

ALLIES DOMINANT IN THE AIR

As the war goes into its third winter, Britain and her allies are dominant in one element, the seas, and appear to be slowly achieving dominance in another element, the air. Germany, it is conceded, still is far superior on land.

With the Luftwaffe losing thousands of planes and pilots in Russia, it is doubtful if Germany ever again will be able to match Britain and her allies in the air, particularly if one of those allies should be the United States.

It is indeed possible to picture a situation, along about 1943, where Britain and her allies will have such strength in the air that the German pilots will find the tables turned completely on them, and thus be made to

realize how things were for the Poles, the R. A. F., the French, and the others they so clearly outnumbered in the early days of the war.

The theory that Britain could bomb Germany into surrender from the air was advanced here several months ago by Malcolm MacDonald, young British High Commissioner to Canada.

MacDonald, son of the late Prime Minister Ramsey MacDonald, had just made a tour of Canada and had observed the great hatchery for the war birds there. Under the Empire training program in Canada, something like 50,000 airmen are being trained annually.

BEAVERBROOK DISAGREES

From these schools, MacDonald said at a press conference at the British Embassy, would come the men who would bomb Germany into surrender, smashing at her war factories and shattering German morale. The German morale, he said, was much more brittle than the English.

A few weeks later Lord Beaverbrook came to town. He had just come from the meeting of President Roosevelt and Prime Minister Churchill off Newfoundland, and he too held forth before newspapermen at the British Embassy.

He was told about MacDonald's statement about bombing Germany into surrender. Did he agree with this thesis? Beaverbrock, who once was the head of British aircraft production, glowered and snapped.

"They couldn't bomb us into surrender, could they?"

Beaverbrook was reported to have told some Senators, in answer to their questions concerning an A. E. F., that Great Britain most certainly did expect another A. E. F.

Whatever Americans may think or hope on this score, therefore, the British are convinced that there is no such thing as a cheap war. Many spokesmen on this side of the Atlantic agree with them. Somebody—perhaps it was Gen. Hugh Johnson—once said that you can't fight a war just a little bit, any more than you can put out a fire just a little bit.

WAVELL-AUCHINLECK VIEWS

The interviews with Gen. Sir Archibald Wavell, now British commander in chief in India, and Gen. Sir Claude Auchinleck, British commander in the Middle East, were obtained by Harold Denny, of the New York Times. Denny interviewed both men in Cairo, Egypt; Wavell on July 4, and Achinleck on July 7. This it will be noted was after Germany launched her attack on Russia.

General Wavell told Denny that, notwithstanding the furious fighting that was then taking place in Russia, the West remained the principal battlefield.

"Can you win the war without America's full-scale participation?" Denny asked.

Wavell shook his head slowly and then replied:

"We shall have to have airplanes, tanks, munitions, transport, and finally men."

"When?"

"The sooner the better. But that depends on when you are ready, doesn't it? I suppose when you get into all-out production you will be able to equip any number of men for anywhere in the world."

"ON THEIR OWN SOIL"

To General Auchinleck, Denny put pretty much the same question, saying:

"Do you think American manpower will be needed before this war is won?"

"I do, certainly," said Auchinleck. "If this war is to be won properly—and it is not to be won unless it is won properly, with no armistice—it has got to be won in Europe. And in Germany.

"The Germans must be beaten on their own soil, exactly the way Napoleon was beaten. And if this is the way it is to turn out, we certainly are going to need American manpower, just as we did in the last war."

Lord Halifax, the British Ambassador, who has just come back from a visit to England, was asked here yesterday if the British were counting on an A. E. F.

"I never heard that question discussed in England," he said. "That I can truthfully tell you, for the reason that we feel that is a matter for the American people themselves to decide."

Lord Halifax said that he had always felt that the only way to defeat Germany was to inflict a military victory on her on land as well as in the air.

The insistence of Wavell and Auchinleck on beating Germany "properly" on her own soil recalls what Gen. John J. Pershing, commander of the last A. E. F. said about the World War. In his two-volume account of that war, he said it was a serious mistake for the Allies to have allowed the Germans an armistice whereby they were allowed to march home with banners flying, and without having to fight a battle on German soil. He would have had the Allies occupy Berlin just to remind the Germans who had won the war.

Extension of the Sugar Act

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

EDITORIAL FROM THE LABOR RECORD

Mr. SANDERS. Mr. Speaker, the extension of the Sugar Act and the principle which will be expected in such legislation will probably be considered by this Congress in the near future. This legislation and the principle embodied therein will be of tremendous importance to everybody in the United States—the sugar producer, both farmers and refiners, the working people, and the consuming public.

The viewpoint of the working people of our section is well expressed in an editorial that appears in the Labor Record in the August 1941 issue. The Labor Record, incidentally, is the local organ of the American Federation of Labor.

The editorial in question reads as follows:

LIFT THE SUGAR RESTRICTION

The growing of sugarcane and the production of raw and refined sugar has long been hampered in Louisiana and other States.

With European and Asiatic countries at war today, there will be, without question of doubt, an acute sugar shortage which will result in exorbitant prices and severe rationing.

The Washington powers have long deprived us the right to plant more cane and beets on an increased acreage basis because of the false belief that our "good neighbor" relations will be endangered. We have always been a stanch advocator of the good-neighbor policy, but we are stanchly opposed to a sugar-curtailment law or price fixing at these times, when our every resource should be used to help supply the sugar demands of the United States and our allies.

Sugar has always been one of the vital needs of the American public and the principal agricultural pursuit of several States. In normal times this community has been one of the largest sellers in the line of food products. At this time, when war is spread far and wide, sugar is supplying the energy needed by men on the battlefield and in defense plants. After the war is over the task of feeding the exhausted nations will remain with us, and, as usual, sugar in great quantities will be needed to supply the demand.

It is high time that Washington realizes our potential resources and gives us the green light, to plant and refine to capacity so that a serious sugar shortage will be averted.

Anti-Semitism

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial published by the New York Herald Tribune on September 17, 1941.

In these days, when forces all over seek to create intolerance in the United States, an editorial like the one I am now presenting to the House is as refreshing as the morning dew.

[From the New York Herald Tribune of September 17, 1941]

A LOATHESOME WEAPON

Anti-Semitism was the most contemptible, as it was also the most dangerous, of all the weapons in the armory with which Hitler subverted Germany and set out to enslave the world. And from time immemorial the meanest, the most contemptible, as well as the safest and easiest, excuse of those who have spread this poison—whether Nazis, or their sympathizers or their counterparts in other times and places—has been the pretense that the poisoner was really only a great-hearted friend of the Jews, trying to save them from the prejudices which their "unwisdom" or their "excesses" would otherwise arouse. One encountered it, ad nauseam, in the early days of the Hitler movement in Germany; one has met it over and over again elsewhere. Its viciousness is apparent; it is an obvious and despicable device for spreading the bigotry it pretends to combat. Yet this is the precise defense which Senator NYE has raised against the plain inference that the isolationists' precious "investigation" into the motion-picture industry is primarily an attempt to light the fires of Nazi anti-Semitism in aid of a cause already desperate.

Senator NYE, America First, and the other isolationist leaders alone know their own inner motives. Others, endeavoring to assess them, can only look at the evidence. They

can only infer that the increasing persistence with which the anti-Semitic poison has appeared in isolationist pronouncements is not an accident. It was hardly an accidental choice of names when Senator WHEELER, in an isolationist speech as long ago as last February, was denouncing "political control by a financial oligarchy, whether it be the Thyssens and Krupps in Germany, the Rothschilds in England and France, the Sassoons in India and China, or the Morgans, the Warburgs, the Kuhn-Loebs, and other international bankers in the United States." One cannot forget Senator NYE's speech on August 1 in St. Louis:

"Who is pushing and hauling America to plunge us into this war? Who are the men? Who is putting up the money for all this propaganda? * * * I haven't the time to name all those contributing to our march to war, but I will tonight name some of them."

Out of thousands he might have selected, he actually gave 17 names of men prominent in the motion-picture industry, all Jewish sounding (that at least 2 are actually non-Jews was not explained) and carefully omitting the names of non-Jewish executives of equal importance in some of the very companies to which he referred. The fact that the present investigation has been hastily broadened to bring in the names of a few non-Jewish motion-picture people does not remove the impression made by this speech.

One remembers America First's statement, appearing in the Daily News here on September 6, citing those who were attacking it. Among the thousands or hundreds of thousands of non-Jews who might have been used as examples, America First selected, in addition to British-born Dr. Frank Kingdon, three Jews, and a speaker before the Jewish War Veterans. After this, Mr. Lindbergh's virtually unconcealed appeal to antisemitism 5 days later could not be regarded as an isolated episode; and the motion-picture investigation, beginning with Senator NYE's pronouncement that "four names, each that of one of the Jewish faith, each foreign born" are "primarily responsible for propaganda in the motion-picture field" could take on, despite all the Senator's protestations, but one interpretation.

Many isolationists are not anti-Semitic, we are glad to concede. But the evidence that their leaders are deliberately taking up this despicable, disruptive, and profoundly inhuman and un-American weapon to bolster a lost cause is too strong to be disregarded; and there is no non-Jewish American deserving the name who will not turn from that business with loathing.

Life in the Navy

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

LETTER FROM A CONSTITUENT

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter recently received by me:

OCTOBER 2, 1941.

DEAR MR. DINGELL: Thanks to your help and cooperation, I am in the Navy now.

I hope I'm not taking up your valuable time reading this letter. But I am very happy to be able to serve my country, and ever so happy to be here.

The food is wonderful here and it makes a fellow feel like a man.

I can't thank you enough for helping me get into the Navy Mr. DINGELL.

I am the first platoon leader in my company.

Well, Mr. DINGELL, I'll close now as I thought I would write you a few lines to tell you how I like the Navy.

It's swell.

Respectfully yours,

LEONARD C. LANG,
Company 156, United States Naval Training Station, Great Lakes, Ill.

H. R. 10: Cherokee Jurisdiction Bill

EXTENSION OF REMARKS

OF

HON. JACK NICHOLS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. NICHOLS. Mr. Speaker, referring to H. R. 10, Seventy-seventh Congress—House Report No. 289—Union Calendar No. 86:

The Representatives of the State of Oklahoma, by unanimous vote, passed the following resolution on the 6th day of May 1941:

"CERTIFICATE

"We hearby certify that the following preamble and resolution were adopted by the unanimous vote of the Oklahoma delegation in the House of Representatives on May 6, 1941:

"'Whereas the Government of the United States pledged the Five Civilized Tribes and the people of Oklahoma a settlement of the Indian claims against the United States if the Indians would agree to white settlement of Indian Territory and to the creation of the State of Oklahoma; and

"'Whereas Congress, in pursuance thereof, passed jurisdictional acts to that end, among others the Act of April 25, 1932, to permit the Eastern and Western Cherokees to present the claims now referred to in H. R. 10, Seventy-seventh Congress, and

"'Whereas the Oklahoma delegation petitioned the President of the United States to bring these claims to a settlement, and

"'Whereas the Secretary of the Interior drew a bill for this purpose which was introduced by the chairman of the Committee on Indian Affairs of the House of Representatives, to wit, H. R. 10, which, after several hearings, was reported with amendments to the House, unanimously and favorably, and

"'Whereas it is manifest from the hearings before the Committee on Indian Affairs and from the reports of the Secretary of the Interior, these Indian groups are now entitled to a final judicial determination of their present claims on the merits, and

"'Whereas, the settlement of the affairs of the Five Civilized Tribes is of great importance to the State of Oklahoma and to the peace and security of its citizens, and

"'Whereas both the Democrats and Republican Members of this Congress were elected on national platforms respectively pledging a speedy settlement of all Indian claims: Therefore, be it

"'*Resolved*, That the Chairman of the Oklahoma Delegation, Hon. Wilburn Cartwright, is hereby requested on behalf of the State of Oklahoma to call to the attention of the chairmen of other State delegations, the request of the State of Oklahoma that H. R. 10, Seventy-seventh Congress, be passed, giving these Indians an opportunity to present their claims to the Court of Claims with the right of appeal to the Supreme Court of the United States, and fulfilling the pledges made by our Government.'

"WILBURN CARTWRIGHT,
"Chairman of the Oklahoma Delegation.
"VICTOR WICKERSHAM,
"Secretary of the Oklahoma Delegation."

Mr. Speaker, the Eastern Cherokee case described in H. R. 10, has never been heard by any court on its merits, notwithstanding any suggestions to the contrary. The above statement I base upon the Jurisdictional Act contained in section 68 of the Cherokee Allotment Act, approved July 1, 1902 (32 Stat. 716). This act authorized the Cherokee Tribe of Indians or any band thereof to sue the United States for any legal or equitable claim in accordance with the revised statutes 2103–06, which statutes required the attorney's contract to be approved by the Secretary of the Interior. The Eastern Cherokee never had any contract approved by the Secretary of the Interior. The manner in which the Court of Claims in 40 Court of Claims 252, and the United States Supreme Court in 202 United States 101, considered the equitable rights of the Eastern Cherokees was attained by the Court of Claims itself directing the attorney who represented individual Eastern Cherokees to intervene in the suit brought by the Cherokee Nation, or in the name of the Cherokee Nation, under the act approved July 1, 1902, aforesaid.

Three Eastern Cherokees from Oklahoma had employed attorneys to represent them and others having a like interest and this committee, consisting of David Muskrat, Daniel Gritts, and Frank J. Boudinot, had employed John Vaile, of Fort Smith, Ark., in a contract not approved by the Secretary of the Interior. John Vaile employed Robert L. Owen. Individual Cherokees east of the Mississippi River employed R. V. Belt and Belva Lockwood, respectively. Owen & Belt filed an intervening petition tentatively without any approved contract, the suit being numbered 23214. Belva Lockwood filed a like petition, numbered 23212. Having no approved contract, Owen & Belt and Belva Lockwood were directed by the court to intervene in No. 23199, which had been brought in pursuance of law, 2103–6 Revised Statutes. Their only issue was against the Cherokee Nation as to their ownership of item 2 of the accounting and the appeal to the Supreme Court in the name of the Eastern Cherokees was against the Cherokee Nation in their behalf exclusively. The Cherokee Nation, under the jurisdictional act of July 1, 1902, through the principal chief appointed attorneys to represent the Cherokee Nation—that is, the Cherokee government, then defunct. This contract by the Cherokee chief was

approved by the Secretary of the Interior, but the Cherokee Nation there represented was a totally different entity from the Eastern Cherokees. The Cherokee Nation represented by the Cherokee chief was a political entity, established to protect life and property in the Cherokee country. Its citizens included 16,000 persons who were not Eastern Cherokees—to wit, the intermarried whites, the Cherokee Freedmen, so called, the adopted Delawares, the adopted Shawnees, other adopted Indians, and the Western Cherokees. The Eastern Cherkoees contained 15,000 members who were not citizens of the Cherokee Nation, thousands of whom resided in probably a dozen States other than Oklahoma. The Guion Miller register of Eastern Cherokees made as Commissioner of the Court of Claims demonstrates this fact, that the Eastern Cherokees were an entirely different entity from the citizens of the Cherokee Nation.

The Cherokee Nation suit in the Court of Claims, filed in January 1903, was numbered 23,199, and did not contemplate any review of the treaties and accounts of the Cherokee Nation by court. It contemplated only bringing suit for an indebtedness acknowledged by the United States in the so-called Slade-Bender account. The Slade-Bender account arose under the contract of the Cherokee Nation to quitclaim the Cherokee outlet in Oklahoma to the United States. The Outlet contained over 8,000,000 acres of land. The payment of the account was an essential part of the purchase price to be paid to the Cherokee Nation for the land.

The United States agreed as part compensation for this quitclaim to make a statement of the amounts due the Cherokee Nation. The Secretary of the Interior employed Slade and Bender to make the account. It was not a judicial proceeding. It was an account made under the direction of the Secretary of the Interior. The account when made was accepted by the Secretary of the Interior. It was presented to the Cherokee Nation May 21, 1894, and accepted by the Cherokee Government December 1, 1894, on the condition that the amount acknowledged to be due should be immediately paid by the United States. It was not paid and suit was permitted by the act of July 1, 1902, known as the Cherokee Allotment Act, as heretofore recited.

When this matter went before the Court of Claims, Owen and Belt, on behalf of the Muskrat Committee, and in the name of the Eastern Cherokees, urged that the second item of the Slade-Bender account equitably belonged to the Eastern Cherokees under the ninth article of the Treaty of 1846 (9 Stat. 871) and did not belong to the Cherokee Nation or its citizens who were not Eastern Cherokees.

There was no misunderstanding of this matter in the Court. The Court of Claims directed the attorneys of the Muskrat Committee to intervene on behalf of their clients and they did intervene in the suit brought by the Cherokee Nation against the United States, No. 23,199. In intervening they did so by direction of the Court and not under the authority of the statutes of the United States, 2103–06, as the Secretary of the Interior did not recognize the attorneys of the Muskrat Committee as entitled to represent the Eastern Cherokees.

But the right of the Eastern Cherokees were not involved as far as a review of the treaties was concerned in the suit 23199 which related only to an account rendered by Slade and Bender and adopted by the United States, and the Court in commenting upon this claim of the Cherokee Nation made the following comment by the Chief Justice of the Supreme Court of the United States in Two Hundred and Second United States Reports, page 101, quoting from the language employed by Chief Justice Nott, of the Court of Claims, in the case 23199, 40 Court of Claims, page 252, as follows, to wit:

In the opinion of the court this case is simply one to recover purchase money upon a contract of sale. * * * The account was merely a means to an end. The end was the immediate payment, as near as might be, of the whole consideration to be given for the cession of the outlet. * * * This is not the case of a party prosecuting an unliquidated debt, but a case of sale and delivery and nonpayment of the purchase money for the thing sold and delivered.

The above facts stated, fully justify the unanimous report of the Committee on Indian Affairs of the United States Senate (Senate 2952, 76th Cong., S. Rept. 1556); by the unanimous report of the Committee on Indian Affairs of the House of Representatives in its report on Senate 2952 (76th Cong, H. Rept. 2373); by the report of the Committee on Indian Affairs of the House on H. R. 10 (77th Cong., Rept. 289), the bill now under consideration; and by the report of the Secretary of the Interior on Senate 2952 (76th Cong.), on H. R. 10 (77th Cong., H. Rept. 289); and by the opinion and judgment of the Court of Claims in case No. 23199, 40 Court of Claims 252; and by the opinion and judgment of the Supreme Court of the United States (202 U. S. 101, at p. 121).

The Eastern Cherokees is a different entity from the Cherokee Nation, plaintiff in case No. 23199 (40 Court of Claims 252).

The Eastern Cherokees contained about 15,000 members of the group who were not citizens of the Cherokee Nation and the Cherokee Nation aforesaid, contained about 16,000 citizens who were not members of the Eastern Cherokee group, to wit, Cherokee freedmen, intermarried whites, adopted Delawares, adopted Shawnees, other adopted Indians and Western Cherokees.

The Cherokee Nation aforesaid, the defunct Cherokee government, had no interest as such in the per capita promised to the Eastern Cherokees in the ninth article of the Treaty of 1846 (9 Stats. 871)—opinion of Attorney General P. C. Knox, 1903.

When the Eastern Cherokees attempted to obtain a settlement of their claim versus the United States, under the ninth article of the Treaty of 1846, from 1900 to 1902, the House of Representatives by resolution requested the Attorney General to advise the Congress as follows:

Resolved, That the Attorney General of the United States is hereby requested to advise the House of Representatives with all convenient speed in the case of the Eastern Cherokees against the United States whether or not the award rendered under the Cherokee agreement of December 19, 1891, ratified by act of Congress approved March 3, 1893, as set forth in House Executive Document No. 182 of the Fifty-third Congress, Third session, and the findings of fact of the Court of Claims of April 28, 1902, is res adjudicata; to review the opinion of the Department of Justice of December 2, 1895, and advise the House of Representatives whether the reasons set forth in that opinion now constitute a valid defense to the payment of said award. (H. Doc. No. 309, 57th Cong.)

Under this resolution the Attorney General, on January 22, 1903, reporting to the House of Representatives, said:

Neither the agreement nor the provision appropriating money to meet the expense of the accounting authorized an accounting with the Eastern Cherokees or between parties other than the United States and the Cherokee Nation, and if the accounting as had extended to matters outside of the authorization, it is surely in that respect not obligatory upon the United States. Nor is there anything in the findings of the Court of Claims which changes or enlarges the effect of this accounting, or makes it res adjudicata between the United States and the Eastern Cherokees. (H. Doc. No. 309, 57th Cong., 3d sess.)

As a group, the Eastern Cherokees never appeared in court under the authority of law until the Jurisdictional Act of April 25, 1932. United States Revised Statutes 2103–06 requires an Indian group to appear through attorneys having a contract made in pursuance of this statute and approved by the Secretary of the Interior.

By section 68 of the Cherokee Allotment Act of July 1, 1902 (32 Stats. 716) the Court of Claims was authorized to hear and determine any suit brought by the Cherokee tribe or any band thereof through attorneys employed in pursuance of the revised statutes, Sections 2103–06, and to make parties any party having an interest in the suit. By an amendment of March 3, 1903, the Eastern Cherokees were given the status of a band for all purposes of said section 68 and the Court of Claims was directed to make the Eastern Cherokees party to any suit brought on the Slade-Bender Account (H. Doc. No. 309, 57th Cong.).

In cases 23199, 40 Court of Claims, 252, and 202, United States 101, three Eastern Cherokees, representing themselves and in the name of the Eastern Cherokees, filed a petition (No. 23214), setting up an equitable right to the second item of the Slade-Bender Account. Their attorneys had no approved contract, but were directed by the Court of Claims on the 14th of February, 1905, to intervene in the suit brought in the name of the Cherokee Nation—the defunct Cherokee Government—case 23199.

I submit herewith a photostatic copy of this intervening petition showing on its face that it was by order of the court, and also a photostatic copy on the back thereof giving the authority of the presiding

justice, Hon. Stanton Peelle, authorizing the filing of this intervening petition by the attorneys of the three Eastern Cherokees aforesaid. The intervening petition was signed by Robert L. Owen and R. V. Belt and was filed in the name of the Eastern Cherokees.

The portion of the petition which is not of importance in this matter is omitted. The record is confined to that portion which shows that the intervening petition was by order of the court and was limited to the issues in the case No. 23199.

Many thousands of the Eastern Cherokees reside in my district, largely full-blood Indians who are very poor, who are entitled to this money due them, amounting, if they win, to probably over $100 each. They are entitled to have their claim given a fair hearing with the same right of appeal to the Supreme Court of the United States as has been given to many other Indian tribes by the Congress where constitutional or treaty rights were involved, such as the Crow Indians of Montana, the Chippewa Indians of Minnesota, various Indian tribes of Alaska, the Chippewa Indians of Wisconsin, the Menominee Indians of Wisconsin, the Klamath and Modocs of Oregon and Washington, and a band of Snake Indians of Oregon and Washington, Red Lake Band of Chippewas in Minnesota, and so forth.

For citations, see Appendix of the CONGRESSIONAL RECORD, page A4214.

EXHIBIT A

[In the Court of Claims. *The Cherokee Nation* v. *The United States*. No. 23199. The intervening petition of the Eastern Cherokees in the case of the *Cherokee Nation* v. *The United States*, No. 23199, filed under the order of the court]

Now come the Eastern Cherokees under the direction of the court to interplead in the case of the *Cherokee Nation* v. *The United States*, No. 23199, * * *.

Respectfully submitted.

OWEN O. BELT,
ROBERT V. BELT,
Attorneys of Record.
WM. H. ROBESON,
Of Counsel.

FEBRUARY 14, 1905.

No. 23199. In the Court of Claims. *The Cherokee Nation* v. *The United States*. Intervening petition of the Eastern Cherokees.

Let this petition be filed as of February 14, 1905.

F. P. P.

Filed February 14, 1905, Court of Claims.

OWEN O. BELT,
ROBT. L. OWEN,
R. V. BELT,
Attorneys.
W. H. ROBESON,
Of Counsel.

Mr. Speaker, the Five Civilized Tribes, with great docility and deeply against their own desire, agreed to relinquish their tribal ownership of the lands of the State of Oklahoma, and to allot the remainder to enable the United States to establish the State of Oklahoma, now represented by nine Members of Congress on this floor. They have testified, as above stated, that the United States agreed, as part consideration, that the United States would provide a means for a complete settlement of the claims of the five tribes.

The United States, in the last fiscal year, received over $78,000,000 of revenue from the people of Oklahoma, which would not have been received except for the concessions made by the Five Civilized Tribes. It is asking very little when the Oklahoma delegation demands the fulfillment of the pledges made by the United States to the five tribes. We trust our colleagues will be good enough to consider and remember this in passing on H. R. 10.

Price Fixing of Agriculture's Products

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

PETITION OF OKLAHOMA FARM ORGANIZATIONS

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition:

Petition and resolution

Hon. VICTOR WICKERSHAM, M. C.,
House Office Building, Washington, D. C.:

We, the Greer County Farmers Union, Oklahome Cotton Cooperative Association, Farmer's Union Cooperative Gin, and Quint County Cooperative Creamery, all of Greer County, Okla.,

Do petition the Congress of the United States of America, through the Honorable ELMER THOMAS, United States Senator of Oklahoma,

That the Congress of the United States of America refrain from placing any and all price-fixing ceilings on agricultural products; that the price of farm products be based on a par with industrial products.

To fix agricultural products at this time would place the American farmer in a position he could not meet, because of the rising cost of farm machinery and repairs, the increased cost of labor and living expenses.

The national emergency demands that food and clothing be produced in abundance; price ceilings would impair the national defense by hindering the production of agricultural products.

Therefore the members of the following farm organizations of Greer County, Okla., go on record as against price-fixing schemes for agricultural products by the Congress of the United States, assembled at Mangum, Okla., the 4th day of October 1941.

Resolution Committee:

W. O. LAWSON,
Greer County Farmers Union.
BOB HEATLEY,
Oklahoma Cotton Cooperative Association.
A. HINNON,
Farmers Union Cooperative Gins.
L. G. CLARK,
Quint County Cooperative Creamery.
H. J. BANKS,
Chairman of Joint Meeting.

Attest:

HENRY WORTHINGTON,
Secretary of Joint Meeting.

Izaak Walton League of America Adopts Important Resolution

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

RESOLUTION ADOPTED AT MEETING IN CHICAGO, SEPTEMBER 20

Mr. MUNDT. Mr. Speaker, only those with conveniently short memories can forget the exploitation of nature in this country which occurred during the World War period. America is still paying the penalty for short-sighted policies and dollar-grabbing practices which were in vogue at that time.

It is to be hoped that during the present emergency this country will not forget or ignore the lessons learned a quarter of a century ago. Let us not now commit crimes upon nature and circumvent the true practices of conservation in the name of national defense. Let us remember that when we permanently destroy the bounty of nature we destroy the basis of all that has made America great.

On September 20, the national directors of that outstanding conservation organization, the Izaak Walton League of America, met in Chicago and adopted the following thought-provoking resolution which I take this opportunity of calling to the attention of the Congress and the country:

Whereas the Izaak Walton League is committed to protection of public rights in natural resources, and

Whereas many bills now before Congress under the banner of national defense completely ignore these values while actually contributing nothing to valid defense: Therefore be it

Resolved, That the directors of the Izaak Walton League of America in meeting at Chicago on September 20, 1941, petition the President and the Congress to call a moratorium on these unessential projects as a serious sabotage of real national defense through their immense diversion of money, manpower, and material.

Report to the People of the Tenth District of Illinois

EXTENSION OF REMARKS
OF
HON. GEORGE A. PADDOCK
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

INFORMATION AND VOTING RECORD JANUARY 3–OCTOBER 1, 1941

Mr. PADDOCK. Mr. Speaker, a Member who represents a congressional dis-

trict like the Tenth Illinois, which includes more than 625,000 people, cannot reach them all through the newspapers, the radio, the postman, and personal interviews. I have, therefore, prepared a detailed report covering the period from January 3, 1941, to October 1, 1941. It may be of interest to other Members whose district problems are similar to ours.

REPORT OF CONGRESSMAN GEORGE A. PADDOCK TO THE PEOPLE OF THE TENTH DISTRICT OF ILLINOIS

Our district is the eighth largest in population in the country. It extends from the Wisconsin-Illinois line as far south as North Avenue in Chicago, and includes all of Lake County, four Cook County townships (New Trier, Northfield, Niles, and Evanston) and all or part of nine Chicago wards (41, 43, 44, 45, 46, 47, 48, 49, and 50). It contains farming territory, industrial areas, and suburban and city residential sections, with numerous educational institutions. Its population includes substantial numbers of lawyers, physicians, teachers, and other professional people, and the workers, managers, or stockholders of every type of American business. Its tax payments, direct and indirect, are a considerable fraction of the Nation's income.

Because of these facts the duties of its Congressman are unusually varied, requiring contacts with almost every department and bureau of the Federal Government.

My assignment to the important Interstate and Foreign Commerce Committee was a recognition of the diversified interests of the Tenth District. To this committee are referred bills on commercial aviation, the railroads, and the coal industry; it receives food-and-drug regulatory legislation, defines navigable streams and rivers, and considers bills regulating commercial brands, and travelers and agents in interstate commerce. The committee's recent legislation includes the Federal Communications Act, the Securities and Exchange Act (all S. E. C. amendments and bills come before the committee), and the Public Utility Holding Companies Act.

The work of every Congressman can be divided into three general groups: national legislation, district matters, and the personal affairs of constituents.

1. NATIONAL LEGISLATION

My complete voting record from January 3, 1941, to October 1, 1941, as compiled by the Legislative Reference Service of the Library of Congress, with citations to the CONGRESSIONAL RECORD, is as follows:

January 22: H. R. 1437, additional shipbuilding facilities for the United States Navy. On passage, Yea, page 243.

January 31: H. R. 2788, independent offices appropriation bill. On motion to recommit with instructions to reduce nondefense appropriation by $25,000,000, Yea, page 456; on passage, Yea, page 457.

February 8: H. R. 1776, lend-lease bill. On motion to recommit with instruction to credit Great Britain not exceeding $2,000,000,000 for purchase of defense articles in the United States, Yea, page 814; on passage, Nay, page 815.

February 11: House Resolution 90, to continue Dies committee to investigate un-American activities, Yea, page 899.

February 17: H. R. 2665, apportioning of Representatives in Congress among the several States by the equal proportions method. On House Resolution 101, for consideration of bill, Nay, page 1079.

February 18: H. R. 2665, on motion to recommit, Yea, pages 1128–1129. On passage, Nay, pages 1129–1130.

March 11: H. R. 1776, lend-lease bill. On House Resolution 131 to agree to Senate amendments. Nay, page 2178.

House Resolution 120, investigation of national-defense activities. Yea, pages 2189–2190.

March 19: H. R. 4050, lend-lease appropriation bill ($7,000,000,000). On motion to recommit with limitations upon the expenditures, Yea, pages 2383–2384. On passage, Yea, page 2384.

March 21: H. R. 4124, first supplemental national-defense appropriations ($3,776,393,254). On passage, Yea, pages 2485–2486.

March 25: H. R. 3368, appropriation of $1,500,000 for the Office of Government Reports, a division of the Executive Office of the President. On passage, Nay, page 2566.

March 26: S. 262, cotton warehousing and commodity credit corporation bill. On passage, Nay, pages 2594–2595.

April 1: H. R. 968, provides weights and standardization of cotton baling. On passage, Nay, page 2799.

Senate Joint Resolution 43, Inter-American Coffee Agreement. On passage. Not voting, paired, page 2842.

April 2: House Resolution 162, to authorize studies and investigation of the progress of the national-defense program. Yea, page 2907.

April 23: H. R. 137, provides for appointment of one additional judge for the Eastern District of Missouri. On motion to recommit, Yea, pages 3266–3267.

H. R. 148, to permit United States attorneys to reside within 20 miles of the District of Columbia. On passage, Nay, page 3270.

April 28: H. R. 4342, provides for blackouts in the District of Columbia. On motion to strike out enacting clause, Yea, page 3352.

May 7: H. R. 4466, ship-seizure bill. On motion to recommit, Yea, pages 3727–3728. On passage, Nay, pages 3728–3729.

May 12: H. R. 3490, to fix annual amount for expenses of the District of Columbia. On passage, Nay, pages 3939–3940.

May 13: Senate Joint Resolution 60, to fix corn- and wheat-marketing quotas. On conference report, Nay, pages 3985–3986.

May 22: H. R. 4671, plant protection force for naval shore establishments. On amendment providing for appointment of personnel by the Secretary of the Navy without regard to civil-service laws, Yea, page 4336.

May 26: H. R. 4646, powers of President relating to stabilization fund and weight of the dollar. On House Resolution 211 for consideration of the bill, Nay, pages 4430–4431.

May 27: H. R. 4646, powers of President relating to stabilization fund and weight of the dollar. On motion to recommit, Yea, pages 4480–4481. On passage, Nay, page 4481.

May 28: S. 1438, extension of operations of the Disaster Loan Corporation and Electric Home and Farm Authority, and increasing authority of the R. F. C. On passage, Nay, page 4528.

June 3: H. R. 3368, appropriation for the Office of Government Reports, a division of the Executive Office of the President. On conference report, Nay, pages 4683–4684.

June 9: H. R. 4965, Military Establishment appropriation bill. On Engel amendment to prohibit the use of cost-plus-fixed-fee contracts by War Department, Yea, pages 4911–4912. On passages, Yea, page 4912.

June 11: S. 158, amending Federal Crop Insurance Act to include cotton and tobacco. On passage, Yea, page 5046.

June 13: House Joint Resolution 193, relief and work-relief appropriation bill, 1942. On Healy amendment to remove 18 months' clause for W. P. A. workers, Nay, pages 5150–5151. On Dirksen amendment that no part of appropriation be used to compensate David Lasser, Yea, pages 5151–5152.

June 19: H. R. 4590, Interior Department appropriation bill, on motion to recommit conference report, Yea, pages 5363–5364. On conference report, motion to concur in Senate amendments, Nay, pages 5367, 5371–5372.

June 24: H. R. 4693, National Housing Act amendments, on amendment to conference report regarding farm tenant mortgage insurance, Nay, page 5482.

June 27: H. Res. 212, to create a committee to study prices paid for necessities of life. Not voting, paired, page 5634.

June 30: H. R. 5049, District of Columbia appropriation bill. On conference report, amendment permitting free tuition to nonresidents in District of Columbia public schools. Nay, page 5776.

H. R. 4228, permits wire tapping in certain cases. On H. Res. 222 for consideration of bill. Nay, page 5767. On Walter amendment with respect to issuance of search warrants. Yea, page 5792. On passage, Nay, page 5793.

H. R. 5166, second deficiency appropriation bill. On conference report, motion to concur in Senate amendment relative to loans, grants, and rural rehabilitation. Not voting, paired, page 5799.

July 9: S. 1524, deferment of men by age groups under the Selective Service Training Act. On House Resolution 243 for consideration of bill. Yea, pages 5893–5894.

July 10: S. 1524, deferment of men by age groups under the Selective Service Training Act. On Healey amendments relative to provisions authorizing President to take over industry during strikes. Yea, pages 5983–5984, 5984; on passage, Yea, page 5985.

July 15: House Resolution 257, to investigate the feasibility of transferring certain Bureaus and Agencies from the District of Columbia. Yea, page 6082.

July 16: S. 1447, provides certain methods of maintaining cadets at United States Military Academy at authorized strength. On motion to strike out enacting clause. Yea, pages 6113–6114.

July 29: S. 1524, deferment of men by age groups under Selective Service Training Act. On motion to recommit conference report. Yea, page 6424.

July 30: H. R. 5417, revenue bill, 1941. On House Resolution 280 for consideration of bill. Nay, page 6465.

August 4: H. R. 5417, revenue bill, 1941. On amendment to strike out joint income-tax returns. Yea, pages 6731–6732. On passage. Yea, page 6732.

August 5: S. 1579, property-requisition bill. On passage. Nay, page 6791.

August 7: S. 1580, Defense Highway Act. To override President's veto. Nay, pages 6895–6897.

August 12: House Joint Resolution 222, extension of the Selective Service Training Act. On motion to recommit. Yea, pages 7073–7074. On passage. Nay, pages 7074–7075.

August 13: H. R. 5300, provides for corn and wheat marketing quotas. On conference report Nay, page 7095.

S. 1579, property-requisition bill. On motion to recommit conference report. Yea, pages 7104–7105.

In addition to these roll-call votes I have voted many times for reductions in nondefense appropriations in the Committee of the Whole, where there are no record votes.

I have supported every appropriation requested by the administration for national defense.

Bills I have introduced include the following:

H. R. 1424 provides for the registration of trade-marks and copyrights used in commerce.

H. R. 5065 would protect employees' profit-sharing and bonus plans by declaring them exempt from the cumbersome and expensive registration requirements of the Securities and Exchange Act, originally designed only for publicly sold securities, but which the S. E. C. is attempting to spread into the employees' plan field. The bill will be considered by the

Interstate and Foreign Commerce Committee with other S. E. C. legislation at an early date.

H. R. 5617 is a redefinition of the term "reorganization," to prevent the Treasury Department from taxing as "profitable" those transactions in which reorganized properties have been subsequently sold at actual losses to the bondholders who had taken them over. Since this proposal affects every individual or corporation owning bonds in one of these reorganized corporations, including the insurance companies which invested millions of dollars in such securities, this bill would benefit every Tenth District family containing such an investor or policyholder.

2. TENTH DISTRICT AFFAIRS

At the request of the Evanston City Council, I introduced H. R. 5120, authorizing the conveyance by the United States to the city of Evanston of the remainder of the Grosse Point Lighthouse tract. This bill was referred to the Committee on the Merchant Marine and Fisheries. On September 25, after receiving a letter of approval from the Treasury Department, the committee voted to report the bill and recommend its enactment. Passage by the House and Senate will probably result from this favorable action of the Treasury and the Merchant Marine and Fisheries Committee.

Waukegan's proposed Coast Guard station has been before Congress at frequent intervals in recent years, with adverse action based on unfavorable reports by Coast Guard authorities. Although Waukegan harbor handles an increasing amount of shipping for defense industries, and nearby Great Lakes Naval Training Station is steadily expanding, there is still no Coast Guard station between Wilmette, Ill. and Kenosha, Wis. This year a public hearing followed the introduction by me of H. R. 5325, and a five-officer board heard testimony of businessmen, yacht owners, fishermen, and others. The board has not yet reported. If it recommends the new station, H. R. 5325 has a good chance of enactment.

H. R. 5546, which I introduced at the request of North Shore park districts and the Cook County Forest Preserve District, would exempt from Federal taxation the admission fees to municipal, park, or forest-preserve beaches, golf courses, skating rinks, and other recreational facilities where such fees are used wholly for maintenance and improvement.

House Resolution 302 directs the Secretary of the Navy to report on the necessity for a second naval academy, and the advisability of locating it on Lake Michigan in Lake County, Ill. My proposal received much comment in western and Washington newspapers and many western Senators and Congressmen have promised support, Senator C. Wayland Brooks, of Illinois, introducing a similar resolution in the Senate. The attitude of the Navy Department has previously been unfriendly toward another academy, wherever located, but Secretary Knox's report may be favorable because of many new factors in the situation.

With Congressman Charles S. Dewey, of the Ninth District, I have urged the dredging of the north branch of the Chicago River to enable river shipyards to handle Navy smallcraft contracts, and I attended the hearing in Chicago on August 26 held by the War Department to discuss this important matter.

The request of school district 64 of North Chicago for an allotment of Federal funds for school facilities to meet the grave problem of Great Lakes Naval Training Station's expansion, now before the Public Works Administration, is receiving my active cooperation. In addition, there have been numerous interviews and telephone talks and much correspondence regarding appropriations and allocations of funds for Great Lakes, Fort Sheridan, and Glenview Naval Reserve Air Base; defense highway construction, landing strips along highways, recreation centers, and defense housing; post offices and postal routes, and other Government contacts with the district.

3. PERSONAL AFFAIRS OF CONSTITUENTS

The contacts of my office with the individual problems of the Tenth District residents have been numerous and varied. Since January 3, 1941, I have written more than 14,000 personal letters. Eight private bills have been introduced to bring about investigation of claims against the Government. We have given deserved cooperation to sick men who did not belong in the Army, and to healthy ones whose promotions or transfers were delayed by necessary departmental procedure. We have hastened passport visas, and assisted the transfer of money to dependents abroad. We have helped businessmen to get appointments, sent them applications and forms, and located for them the officials who could discuss contracts and priorities.

Almost every day we receive letters or calls from those who wish Government employment. For these people we make inquiries, write letters of recommendation, and refer them to possible openings. In numerous instances this cooperation has had successful results.

Aside from all the customary requests of constituents—for civil-service transfers or House gallery-admission cards, for bulletins on gardening and housekeeping or technical studies and tabulations—we have received a growing number of cases from the various branches of the services. The problems of military routine and the dislocations which service has caused reflect in our mail at frequent intervals. Many cases can be handled through company, regimental, or post commanders. Others are sent to the Illinois Soldiers and Sailors Service Council, of which I am a member. The rest must be taken to the proper divisions of the War or Navy Departments and brought to solution there.

Schools ask for information or publications, chambers of commerce and other commercial associations need the regulations of Government departments and agencies, libraries request reference material, and every manner of personal problem is presented for our assistance.

Each week we send copies of the Office of Government Reports' news bulletin, the official digest of the week's Federal and defense news, to a steadily increasing list who have requested this publication; we also have a mailing list of attorneys and businessmen who wish copies of important pending legislation. News releases on matters of local importance go to the 52 newspapers circulating in the Tenth District.

In conclusion, may I thank the thousands of Tenth District residents who have given me their opinions, comment, and suggestions. Such letters, including those which definitely disagree with my own positions, are extremely helpful and always welcome. Every Tenth District letter or card receives a prompt and personal answer, although I do not believe in making statements as to my future votes. In a rapidly changing situation it is often poor policy to make predictions on complicated and controversial subjects.

Every letter from the district helps in making a decision. I believe a Member of Congress should represent the interests and wishes of his district. When he votes his action protects those interests and interprets those wishes in the light of his own information and according to his own best judgment.

I hope this brief statement of my legislative record and report of office activities will interest many Tenth District residents. Perhaps it will suggest to some of them ways in which their Congressman can be of service.

It is a serious responsibility to be a Member of Congress under present conditions. Our decisions must be made with fallible human judgment on facts often conflicting and incomplete. However, whatever mistakes I have made have been done under my own power and not by remote control of any person, party, or pressure group.

The Americas Stand Together

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

Mr. RANDOLPH. Mr. Speaker, I have just returned to Washington from West Virginia where I attended the events of the twelfth annual Mountain State forest festival in my home town of Elkins. This year our programs centered on pan-Americanism. I believe it important in these days that we give increased attention to strengthening the bonds of understanding and mutual effort with our neighbors to the south. The festival theme was emphasized by outstanding speakers. Believing their remarks to be worth printing in the RECORD I include parts of them.

On Thursday afternoon, October 2, just before the coronation of our queen and the pageant—which was pan-American in treatment—we had the pleasure of listening to Col. Julio E. Briceno, Counselor of the Embassy of Panama. He said:

In 1826 Simon Bolivar, liberator of five South American countries, called together an international congress at Panama City whose purpose was to cement in unity the nations of this hemisphere. That congress was the first of its kind, and, in a way, it may be considered as the spiritual source of the League of Nations and of the Pan American Union.

Years passed. Divergent views and policies did little to cause a closer understanding and cooperation among the republics of the western world. But there were forces at work, forces that in the long run would triumph, forces that today are very near their goal. Ignorance, which has held in check many other aspects of human endeavor, has been the worst enemy to combat ignorance and its close ally, bigotry.

But today we are at last expanding our mental horizon; today, we, the nations of the Western Hemisphere, are increasingly conscious of our interdependence; today, at long last, we have come to realize that, despite differences in climate, language, and race, we have things of far greater importance in common—our beliefs, our form of government, our individualism, our determination to preserve the conquests of civilization from the evil forces now unleashed in an effort to destroy them.

The road toward Pan American unanimity of purpose, toward Pan American solidarity and good faith, has been a tortuous one, and at times one must admit that devious detours threw us off our course. But beginning with the Sixth Pan American Congress at Habana, Cuba, in 1928, we finally found the real path when a resolution was approved

barring any state from interfering in the internal affairs of another. Mutual respect was thus established, and happily so, because without respect there can be no understanding.

On April 12, 1933, President Roosevelt in an address to the governing board of the Pan American Union, which is formed by the Secretary of State of the United States and the chief of missions of the Latin American republics in Washington, proclaimed his transcendental good-neighbor policy. In that same year Secretary of State Cordell Hull confirmed the new policy of good neighborliness at the Seventh Pan American Conference in Montevideo, Uruguay, and a new phase of hemispheric relations was entered into.

In December 1936 President Roosevelt and his Secretary of State made the long trip to Buenos Aires to the Inter-American Conference for the Maintenance of Peace. On that occasion Mr. Roosevelt said that other nations, seeking "to commit acts of aggression against us, will find a hemisphere wholly prepared to consult together for our mutual safety and our mutual good." This declaration was to make the Monroe Doctrine a multilateral policy of all the Americas. In itself this Presidential utterance was to create in the Latin American republics a sympathetic reaction toward its powerful neighbor in the north. The leaders of the American nations had exercised a considerable amount of foresight in sowing better understanding and mutual trust among our countries, so that when the threat of foreign aggression showed its ugly head we were prepared to meet it united as one big family.

We must not take this matter lightly and imagine all that was necessary was a friendly speech to change the attitude of years. No! International friendships come about laboriously, painfully sometimes. They are the outcome of patient work, of definite policies, of an underlying community of interests.

In the Lima Conference, held in December 1938, an effort was made to convert our international solidarity into a hemisphere foreign policy. The declaration of Lima read:

"The governments of the American states declare:

"First. That they reaffirm their continental solidarity and their purpose to collaborate in the maintenance of the principles upon which the said solidarity is based.

"Second. That faithful to the above-mentioned principles and to their absolute sovereignty, they reaffirm their decision to maintain them and to defend them against all foreign intervention or activity that may threaten them.

"Third. And in case the peace, security, or territorial integrity of any American republic is thus threatened by acts of any nature that may impair them, they proclaim their * * * determination to make effective their solidarity * * * by means of the procedure of consultation. * * *

"Fourth. That in order to facilitate the consultations, the ministers of foreign affairs of the American republics, when deemed desirable and at the initiative of any one of them, will meet in their several capitals."

Then came September 1939 and the new European war. Within a few days after peace had been broken, the Foreign Minister of the Republic of Panama, in accordance with the declaration of Lima and in view of the fact that a situation had arisen capable of disturbing the peace of America, extended invitations to the ministers of foreign affairs of the 21 American republics or their representatives to meet at Panama on September 23, sessions to continue until October 3, 1939.

All the governments of the American republics were represented at the meeting, 13 by their ministers of foreign affairs and 8 by representatives of the ministers.

It was divided into three sections—one on neutrality, one on the preservation of peace in the Western Hemisphere, and the third on economic cooperation. The Committee on Neutrality is responsible for the creation of the Inter-American Neutrality Committee which seats in Rio de Janeiro for the duration of the war, attending to problems arising out of the war in violation of our neutral status.

The second important contribution of this committee was embodied in Resolution No. VI on the humanization of war, which contains a request to the belligerents to abstain from the use of means that add unnecessarily to the horrors of war and which contains also an appeal to the National Red Cross Societies to broaden the scope of their humanitarian work for the relief of the victims of the recurrent European folly.

To the Committee on the Maintenance of Peace we are indebted for drafting the unprecedented Declaration of Panama, which established a zone of security around the Western Hemisphere to be kept free of belligerent activities as a measure of continental self-protection and so long as the Americas maintain their neutrality, reserving for our nations their inherent right to have those waters adjacent to the hemisphere, which we regard as of primary concern and of direct utility in our relations, free from the commission of any hostile act by any non-American belligerent nation. It furthermore established our right to undertake to patrol, either individually or collectively, the waters adjacent to our coasts within the specified area of security. It was this declaration which the President of Panama, under Resolution XV of the meeting, was asked to transmit, in the name of the American republics, to the belligerent powers in Europe.

The most important conclusion of Committee No. 3 on Economic Cooperation was the creation of an Inter-American Economic and Financial Advisory Committee composed of 21 experts, 1 from each American republic.

The Panama meeting, which set the bases for a new meeting in Habana, was tangible proof that the nations of the New World were prepared to work together in facing situations which affected them.

The conference held by the Ministers of Foreign Affairs of the American Republics at Habana in July 1940, was of an emergency character designed to consider primarily questions affecting the security and defense of the American continent. As a result of its deliberations two agreements were reached on the question of the provisional administration of European colonies and possessions in the Americas; a convention and the act of Habana. Both predicated on the principle that any transfer, or attempted transfer, of the sovereignty, jurisdiction or possession of American territory from one non-American power to another as a result of events which are taking place in Europe, would be regarded by the American Republics as against American principles and the rights of the American states to maintain their security and political independence. Accordingly, the convention sets forth a procedure for the provisional administration of such territories, by stipulating that if a non-American state shall directly or indirectly attempt to replace another non-American state in the sovereignty or control which it exercised over any territory located in America, thus threatening the peace of the Continent, such territory shall automatically be submitted to a provisional administrative regime to be exercised, as may be considered advisable in each case by one or more American states.

As soon as the reasons requiring this measure shall cease to exist, however, such territories will be allowed the right freely to determine their own destinies. It furthermore provides that any attempt on the part of a non-American state against the integrity or inviolability of the territory will be allowed the sovereignty, or the political independence of an American state shall be considered as an act of aggression against the state which signs said declaration.

In our foreign policy, at least, we in the Western Hemisphere are acting as a homogeneous nucleus, but there are other aspects which we must not neglect. Our cultural expressions must be kneaded into a harmonious pattern. Our economic life must be synchronized. We are to a great extent self-sufficient. It is important that our interdependence and opportunity for reciprocity be accentuated so that truly, at least in this hemisphere, we could say that we love our neighbor as ourselves.

As regards your people and my people, the people of Panama and of the United States offer the world the most noble example of international friendship, living side by side in mutual respect, mutual cooperation, and mutual trust. Together we broke the stiff backbone of the Andes, so that two oceans could meet upon the soil of Panama in a kiss of peace, thus realizing a dream of the century, a marvel of the ages—the Panama Canal. Daily we worked together, mixed our sweat, our blood, and our energies * * * we are partners in a great enterprise and jointly committed to protect it. The people of the American republics are fully aware that in unity there is a strength; that united we stand, divided we might fall.

Humanity has gone mad; humanity has gone berserk in an all-destructive rampage on other continents. Let us keep our sanity, for we are charged with the enormous responsibility of saving the cultural heritage of mankind.

Mr. Speaker, on the third day of the festival, Pan American and Aviation Day was appropriately observed with three speeches delivered at the Elkins Municipal Airport before several thousand persons. The first speaker was Thomas Burke, Chief of the Division of International Communications of the State Department. His remarks follow:

When the United States embarked upon its phenomenal program of industrialization, men who formerly lived on the land were swept into the processes of manufacturing with its inevitable impacts on their intellectual, spiritual, and economic habits. They no longer depended upon themselves to produce a relatively small number of a relatively large variety of things. They became specialists. As such they achieved greater efficiency and higher standards of living. The price that they paid for this transition was the sacrifice of their self-sufficiency. In the spiritual and social readjustments which followed it was inevitable that mass thinking in this country should become broadened to the extent that domestic insularity was broken down and men looked to the Government for guidance and protection which, during their agrarian days, they had been able to administer themselves. The advent of radio and aviation finally served to accelerate this trend not only in the United States but throughout the civilized world. Therefore it was amply apparent in the years immediately preceding 1938 that the fatiguing tempos and exacting demands of industrialization were creating at long last the foundation of a sturdier, yet more flexible, morality in which the wisdom of experience seemed destined to play a dominant role.

Then it was that a small group of malcontents in Europe decided to turn back the clock of civilization to a period when man's behavior was determined solely by his instincts. This small group of fanatics in the guise of a new order served notice on mankind that the trial-and-error progress of our Christianity was impotent and puerile. As they enunciated their primitive dogma, they fell upon and ravished the peoples of western Europe. Since that fearful day, 10 sovereign

states have been violated, international law has been flaunted, the sanctity of the pledged word has become a virtue that exists only in the surviving democracies, and the traditional practices of trade and economics have become the guideposts solely of the remaining nations of the earth that have decided not only to reject the so-called new order but to leave nothing undone within the scope of moral or statutory law to resist its sinister implications.

It is the consensus of sound opinion that in this moral union of free peoples there lies the sole hope for the survival of civilization as you and I have known it and as you and I intend to continue to know it. But the mere desire to enjoy the advantages of liberty and common decency is not sufficient. It will be recalled that at an earlier stage in history, paganism opposed Christianity, and Christianity grew in the black soil of controversy solely because its proponents realistically comprehended the need for aggressively protecting it. Democracy, like Christianity, had its origin in blood and tears. Wishful thinking had no part in its accomplishment and still less in its maintenance. The 21 American republics are notable examples of that principle. We who comprise the New World are by instinct and tradition dedicated to the proposition that we are endowed by the Creator with the inalienable rights of life, liberty, and the pursuit of happiness.

That sturdy Christian philosophy not only motivated the Declaration of Independence by the 13 United States of America in 1776 but inspired with equal depth and determination the immortal Bolivar and served to guide the peoples who now comprise our sister republics in their struggle to establish their freedom. They, too, pledged their lives, their fortunes, and their sacred honor "with a firm reliance on the protection of Divine Providence" in order to have and to hold the rights and privileges of free men.

It should be a matter of great pride and profound satisfaction to every American citizen that in this fearful year of 1941, with the fate of civilization hanging in the balance, the peoples of the 21 American republics have unanimously proclaimed their determination, severally and jointly, to continue their way of life, and, if necessary, forcefully to eject any alien philosophy or people which would threaten to destroy it.

The existence between the peoples of the New World of such an identity of interests is not simply an emotional reaction to the barbarity which presently threatens to engulf the people of Europe; quite contrarily, as Under Secretary of State Welles recently put it, "it is the result of constructive statesmanship on the part of every one of the 21 American republics. We have all of us made our contribution to its existence. But there is no greater danger to its continuance than that any one of us should take it as a matter of course. Its continued vitality depends upon the constant willingness on the part of every one of the 21 sovereign republics of the New World to continue to make such contributions—moral and material—as are required to insure the joint security and welfare of all."

It is noteworthy that constructive statesmanship no longer connotes solely the accomplishment of purely political tranquillity between our governments, but in addition presupposes the will appropriately to assist each other in the mutual working out of the economic and commercial problems which arise as between our respective economies. Surrounded as we are by the grim reminders of the tragedy which stalks the world today, we who comprise the American republics have taken appropriate measures to protect our chosen way of life and the peace which it has brought to us. To that end we have materially augmented our respective air transportation facilities not only through the addition of equipment but, of still greater importance, through the training and development of the nationals of our sister republics in the vital science of aerodynamics. Among no other group of nations on earth could such an undertaking be carried on with such a singleness of purpose and spirit. In that regard it may be pointed out that the peoples of no other quarter of the globe have developed the degree of air-mindedness that characterizes the citizens of the New World. However, it should be borne in mind that in the area occupied by our sister republics the Andes Mountains loom up as one of the most formidable barriers to transportation in the civilized world. Since the days of the Conquistadores, many fertile and productive regions in the lower continent have remained tightly locked between towering walls of rock and dense jungles, chiefly because it would have required the wealth of Croesus to undertake even the primary stages of highway or railroad construction through the forbidding heights of Los Andes. The advent of practical commercial aviation has liberated these regions under the freer flow of normal commercial enterprise.

Let us pause for a moment to examine the aviation situation as it presently exists in the other American republics. At the beginning of 1941, approximately 44 air lines served that area, with a network of about 97,000 route-miles. During the year 1940, the activity of this network accounted for something in excess of 27,000,000 flown miles. An analytical break-down of the operating companies that performed this service showed that about 30 percent of them are owned by or closely affiliated with United States interests and exclusively use American equipment. This group of companies accounted for better than 50 percent of the route-miles and 60 percent of the total of the miles flown in the southern continent—Mexico, Central America, and the Caribbean. The remaining lines within this territory, with the exception of 9 Axis-owned or dominated units, are locally operated and controlled. Exclusive of the Italian Lati—an overwater link between the mainland of Italy and the mainland of South America—the German Lufthansa is the guiding genius of the several feeder lines which constitute the Axis system in various areas in the lower continent. These Axis operations have been established wherever possible in highly strategic points and frequently have been conducted purely on the basis of their propaganda values. Covering about 22,000 route-miles or about 23 percent of the total route-miles in the American republics, they have accounted for approximately 3,500,000 flown miles annually. I am sure you will be glad to know that during the last 18 months this potential menace to the safety of the Americas has been sharply curtailed.

In bold relief against this background of so-called friendly penetration by the Nazis and the less effective contribution of the Fascists, there is in the process of construction through the joint efforts of the 21 American republics a series of national companies which ultimately will be operated and maintained exclusively by bona fide nationals of the Western Hemisphere and dedicated solely to the peaceful commercial and cultural pursuits of the countries in question. This laudable and thoroughly civilized plan will serve not only to weld a stronger link of communications between the Americas but it will eventually result in the strengthening of their respective economies, more particularly in terms of the improvement of the living standards of their peoples. It is mainly for that reason that the other American republics look upon the development of air transportation with such vital interest and enthusiasm.

In this connection it is noteworthy that the practical adaptation to the needs of mankind of motor-propelled, heavier-than-air craft was materially accelerated through the dauntless pioneering of such sons of the Americas as Santos-Dumont, Chavez, Guzmao, Godoy, Cardenas, Carranza, Newberry, Bielovucic, and the Wright brothers.

With such a tradition, it is not difficult to understand that, from the northernmost boundary of the United States of America to Cape Horn, there is an unswerving determination to maintain with justice, fairness, and equality the republican institutions under which we live. In that regard this Government is committed unequivocally to prevent the partners in the tripartite pact from gaining lodgment among us which would permit the carrying out of their policy of fraud, deceit, and brutality. To implement this determination, the United States expects to collaborate unstintingly with the other American governments in any manner that may be consonant with the fullest recognition of their sovereignty. Therefore, I am happy to reaffirm that no practical contribution necessary for the maintenance of our respective national economies or our defense will be spared by the Government of the United States. Through such singleness of purpose, a quarter of a billion men and women of the New World not only are determined to protect their chosen mode of life but, in their unity of purpose, to preserve the very foundation of civilization itself which we and the beleaguered and enslaved populations of Europe and the Orient may enjoy as freemen in the happier days which lie ahead of us.

Mr. Speaker, the next speaker, the Honorable Robert P. Patterson, Under Secretary of War, discussed the rediscovery of America, in which he stressed the need of closer cooperation in the Americas in defense efforts:

This is the season of harvest, when we gather in the riches of the earth's bounty. All around us we see evidences of these riches produced so generously by the good earth. If we could only learn how to use them, there would be more than enough for all of us.

All around us we see evidences of the good life—the well-ordered, balanced life which all of us want to live. We have had with us at this pageant representatives of a way of life whose riches we are only beginning to discover—a life based upon devotion to religion, respect for law, reverence for culture, and love of freedom. The republics of South America are not near us geographically, but they are united with us in determination to preserve the independence for which our forefathers fought.

When we went to school we were taught the meaning of Lexington and Concord and Bunker Hill. But we knew little about the battles fought by our sister republics, which won for them the independence that is as precious to them as ours is to us.

Four weeks ago, on the one hundred and nineteenth anniversary of Brazilian independence, President Vargas proclaimed a watchword which we would do well to adopt for this hemisphere: "Vigilia das armas"—the vigil of arms. That phrase has a proud history, for it refers to the consecration of the noble knight and to the watch he kept over his arms.

Today we must consecrate ourselves anew to that vigil of arms. We know that we must be constantly on guard to protect our hard-won liberties. The present age has given a new meaning to the battles fought to gain those liberties.

We would do well to remember that the fight for freedom which resulted in the independence of the South American republics was fought under even greater odds than our own struggle for independence; that it suffered many and terrible disappointments and was won over a longer period of time. But it was won. It was won because when the hour struck men worthy of the hour were found to lead, no matter how great the odds.

One common thought, beneath the surface differences and disputes, animated the fathers of these republics. You will find it in the words of Washington, of Bolivar, of San Martin. You will find it in the words of Santander, whose passion for the establishment of a government of law was so great that he has been known ever since as the champion of legality.

If we look at the lives of these men, we will find that always it was the rule of law, of reason, of fair dealing, that animated the thoughts and inspired the deeds of the fathers of these republics.

I should like to dwell upon one of the greatest of them for a little space. We are familiar with the guiding ideals of our own leaders. Perhaps we have not been aware that those same ideals were the vital source, the nourishment, and the inspiration of the leaders who won independence in the other American republics. It was most fitting for Lafayette to send to Bolivar the gift of a miniature portrait of Washington, with these words: "Of all men living, and even of all men in history, Bolivar is the very one to whom my paternal friend would have preferred to send this present." Bolivar wore that decoration to his death. It was his prized possession.

Five republics owe their independence to that great soldier, statesman, and martyr. But more than that, every one of the American republics honors him for the guiding idea that we have taken for our common policy—a family of nations working and cooperating together for the common good. This is the heart of Pan Americanism.

"The most perfect system of government," said Bolivar, "is that which produces the greatest sum of happiness possible, the greatest sum of social security and political stability."

We will do well to bear in mind the wise counsel of this great benefactor, in contrast to the ravings of those who call themselves the proponents of the new order. I will quote a few words from Spengler, the apostle of chaos: "Man is by nature a beast of prey. * * * War is the natural state. * * * Peace is an illusion * * *." Spengler demanded the destruction of all existing government and the subjugation of the whole world under a Prussian leader. He cried out for the revival of barbarism and the rise of a leader who would rule the universe.

He got his leader. And a nation provided that leader with armies, airplanes, submarines, and all the trappings of war to carry on his barbaric conquests. That leader has now brought destruction, desolation, and death to half the world, and he means to bring it here. His new order is built on the supremacy of what is called a master race, with slavery in store for all other peoples. His new order is as old as savagery, as ancient as famine.

The world has faced similar dangers before, the dangers presented by lust of conquest. The ages before Christ had Alexander to deal with. The Dark Ages had Genghis Khan. The last century had Napoleon. The conqueror of our day is trying to follow in their footsteps, with a program of knocking his neighbors out one by one. If those neighbors had awakened to their peril in time and had taken common action, Hitler would have been ruined at the very start.

We of the Americas have that chance now. Face to face with the same dangers from without and the same "fifth column" from within, we have the common policy of resistance. Resistance, to be effective, calls for unity of purpose, unity of action. In our community of ideals we have a firm foundation for such unity. In carrying out our task we are rediscovering America.

One of the strongest bonds uniting us, and one which grows stronger day by day, is aviation. The flying officers from the South American republics who are now studying with the United States Army air forces afford proof of this new bond that units us. Our Air Corps officers have also undertaken to train 100 South American pilots for operation of national air lines in their own countries. This is a tangible sign that in our collaboration today we are planning for the new world of tomorrow. Another and a very important example of this collaboration was the creation at Lima of a permanent American aeronautical commission, whose purpose is to coordinate technical activities in aeronautics among all the American republics. Ten days ago the President announced the appointment of 12 top-ranking aviation experts to the United States branch of this permanent commission. This is another visible proof that we intend to adjust our economies for our mutual benefit. We believe in the future prosperity of our neighbors as we believe in our own.

The emergency in which we are now living every day does not give us peace to enjoy the earth's bounty as we would wish to do. But it has taught us valuable lessons. Among the greatest of these is the lesson that we must conserve our bounty, we must balance our agriculture and our industry—but not balance them as Hitler would do, with the bounty of all seized to enrich the one. We seek rather a balance in which we can all live in harmony together as civilized nations.

Meanwhile it is our task to produce the weapons of defense at a greater rate than we have ever produced them before, and to get them to the battle front without hindrance or delay. Every day is crucial. Every hour is vital. The business of this hemisphere is once again the defense of our liberties. If the tide should appear to turn against us, let us remember the words of that great liberator who said, "We will conquer, for Heaven does not want us in chains."

Mr. Speaker, Wings for Good Neighbors was the subject of the final speech, which was given by the Honorable G. Grant Mason, Jr., member of the Civil Aeronautics Board. His remarks follow:

Security for America depends upon security for the Americas. What is to the advantage of one of the 21 republics of the hemisphere is to the advantage of all. But the hemisphere is of tremendous size, reaching from the Arctic to the Antarctic and from the Atlantic to the Pacific Oceans. Time and distance handicap our mutual efforts to build that security.

For this reason we have turned to aviation as the best medium to solve our problem. Planes for defense are so much in the forefront of our thoughts that some of us forget how vital a part the nonmilitary plane is playing. On the wings of commercial air transportation we are maintaining our communications with the whole of pan-America. But we are going further—we are giving practical and effective help that daily adds to the security we all must have. In truth, pan-Americanism and aviation go hand in hand.

The vital relationship between hemisphere security and aviation was touched upon by the President of the United States when he said: "At one point between Africa and Brazil the distance is less than from Washington to Denver—5 hours for the latest type of bomber. * * * Any South American country in Nazi hands would always constitute a jumping-off place for a German attack on any one of the other republics of this hemisphere."

Several years ago the Axis Nations began developing an extensive air-line system throughout most of the countries of South America. The German air-line expansion within South America has been carried on by competent aviation experts with typical Teutonic efficiency. No more important preparation could have been made for any intended thrust against our hemisphere. The extent of the endeavor can be understood when it is realized that finally German and Italian airplanes and pilots were operating scheduled air-line service over 23,000 route-miles, which was approximately 10 percent more than the corresponding mileage operated in South America by the American air-line system.

It has been not only the extent of this Axis air-line penetration, but also the nature of its policies and activities which have represented a serious menace to our hemisphere. It long has been evident that those air lines were maintained for far more sinister reasons than mere commercial operations. And, since the outbreak of the European war, the threat has been practically demonstrated by the performance of certain functions having a more obvious military significance.

Several months ago, it was reported that, while cruising about 100 miles off the coast of Brazil, the British cruisers *Ajax* and *Exeter* sighted one of Syndicator Condor's four-engine transports high overhead. This fact was radioed to the British naval attaché in Buenos Aires who made immediate inquiry of Argentine officials at the airport and found that such a plane had taken off several hours before on a so-called test flight. When no satisfactory explanation could be given on their return a few hours later, the Argentine Government passed a regulation forbidding any of Condor's planes to make any but scheduled flights without an Argentine Army officer aboard. The following day an Argentine newspaper reported the incident and related it to the departure the day previous of a German steamer carrying a large number of the personnel of the German airline Lufthansa, who were going back to active duty with the German Air Corps. As the paper pointed out, knowledge of the exact location of the *Ajax* and the *Exeter* at that moment was invaluable to the safe passage of the German steamer. It also is reported that, more recently, L. A. T. I., the Italian trans-Atlantic carrier, made a similar unauthorized 7-hour flight out to sea from Natal, for which they were fined by the Brazilian Government.

However, L. A. T. I. may be expected in the future to conform more closely to Brazilian laws prohibiting such flights since protection of its right to operate to Brazil has become more important to the Axis governments than the service which could be rendered by an occasional unauthorized flight to sea. As the British blockade has become more effective, L. A. T. I. has become more important as a means of communication between Axis representatives here and their governments at home. On its flights to Brazil it brings funds and instructions for distribution to Axis agents throughout the Western Hemisphere. On its return flights to Europe, it has been carrying industrial diamonds, quartz crystals, and other easily transported war materials.

The groundwork to forestall these dangers was laid as early as the spring of 1939, long before war broke out in Europe. At that time, I was privileged to act as chairman of an interdepartmental committee which worked out a plan for aeronautical development in the Western Hemisphere, which was approved as a basic part of the aviation policy of our Government. This plan, which is being carried out, was founded on a basis of inter-American cooperation and conceived as a mutual benefit, both economic and defensive, to all the nations of our hemisphere.

Many agencies of the United States Government and our aviation industry are cooperating closely in offering every sort of necessary assistance toward eliminating Axis aviation penetration into our hemisphere. For example, if a German air line is stopped from operating, then our country offers every possible assistance, including airplanes and personnel, to replace the German service. Why should our country be willing to do this? Why should it make any difference to a South American country whether Germany is op-

erating an air line locally or whether the United States may appear to be doing the same thing? It is important to explore these questions thoroughly because there is all the difference in the world between the objectives and methods as they are applied to the same problem by Germany or by our country.

Whenever Germany has operated an air line within any country in South America, there has been constant insistence upon the use of German equipment and German personnel. Any efforts of the local government to introduce its own citizens or its own national control over the operations has been met with stiff resistance or flat refusal. The Germans have not wanted the citizens of the American republics to learn how to operate the air lines within their own countries and have opposed the nationalization of those air lines. German air lines within the Americas have been grimly determined to remain German in order to benefit only Germany.

Our own philosophy is utterly different than that which has been followed by Germany. We stand ready to offer all possible help to the end that domestic air line operations become nationalized as rapidly as possible. Besides helping the newly established national services to acquire American equipment and other assistance, we are ready to help them build up a reservoir of skilled pilots and mechanics among their own citizens. Beginning in January, the United States Army will be in a position to train 100 Latin American citizens to the point where they will be capable of serving as copilots. The Civil Pilot Training Program is preparing to take an additional 204 and train them as flight instructors. Then to round out the organization, 120 will be offered training as service mechanics, 120 as instructor mechanics, and 20 as aeronautical engineers. This program would give our neighbor countries a nucleus of 564 thoroughly skilled airmen about which to build their aeronautical future.

Colombia set a precedent for aviation nationalization more than a year ago when it established a new domestic air line company, Avianca, which took over Scadta and eliminated its German personnel. Pan American Airways is a part owner of the new company and acts in an advisory capacity on managerial and technical matters.

A few months ago, the Government of Bolivia canceled the operating right of Lloyd Aero Boliviana, the local German carrier. In order that Bolivia might not be without air service to Brazil, Pan American Grace Airways' route was immediately extended and aeronautical experts of our Government were promptly dispatched to La Paz to help in the creation of a new local company. Our Government is helping to obtain necessary American equipment and will continue to give other assistance until such time as Bolivians are prepared to take over for themselves. Today Bolivia has a national air transport company completely controlled by citizens of the new world and entirely free of Axis influence.

Shortly after Bolivia acted, Peru canceled the operating rights of Lufthansa Peru, the local German air line. Again American aviation assistance was forthcoming. Several experts have been on the scene for some time making surveys and giving other practical aid. American aircraft will again replace German Junkers.

One month ago, the Ecuadorian Government grounded S. E. D. T. A., the German air line. For the last 11 months, Pan American Grace Airways has paralleled most of S. E. D. T. A.'s route and assistance is available to help Ecuador set up a successor company.

The elimination of German air lines in the four countries just mentioned reduces the total routes under German operation in South America by over 11,000 miles. The United States is prepared to assist other countries in eliminating Axis air lines and replacing them, without disruption to their communications, by permanent national air lines, which we will help nurture through their early growth with financial and technical assistance.

Now, I should like to explain briefly how the United States happened to be in a position to render this assistance on such a large scale. The Axis nations may have been ahead in military output, but the United States leads the world in the quality and quantity of its commercial planes. Our civil air lines were flying more miles each year than all the rest of the air lines of the world together. Although we were late getting started, we have probably trained more pilots since war started in Europe than were ever trained in Germany in any similar period.

Our domestic fleet of air lines—about 350 planes in all—is small in comparison with the thousands of planes that are being produced. Yet, according to one estimate, in 1941 this efficient fleet will probably carry nearly a million more passengers, a million five hundred thousand more ton-miles of express, 3,750,000 more ton-miles of air mail than in 1940, due in large part to the demands of national defense. Not long ago 1,200 pounds of aluminum were rushed from Pittsburgh to California by air to avoid an aircraft production tie-up. To fix a broken Navy power shovel, an American company in Illinois recently shipped a 750-pound Diesel engine crankshaft 7,800 miles to Wake Island in the Pacific by air express. And, just this week, Pan American Airways announced the greatest transfer of Army technicians by air ever attempted in the Western Hemisphere. Over 700 men needed in the Canal Zone are to be flown to Panama in the next 90 days. Such examples could be multiplied a hundred times.

As the Air Transport Association has so aptly put it: "It can be truly stated that 24 hours each day our air lines are aiding industry in conserving that most essential of all defense material—time!" And, as defense production increases in our rearmament race against time, speed may be expected to become an even more precious element.

Recognizing the burden of defense responsibility which must be borne by our civil air lines, I believe that upward of 170 new planes may be needed for our domestic air lines by the end of next year to handle estimated increases in traffic. This estimate is based on the carrying capacity of types now in use, but it is my hope that it may be possible to obtain some percentage of larger and newer equipment than that now currently in use.

Although these additional planes would be greatly needed during the emergency, I am not thinking solely of the present crisis. Military use of aircraft gave civil aviation its greatest impetus after World War No. 1. In that post-war period, America lagged far behind. In our defense effort this time, civil aviation plays so important a role that there could be no excuse for the United States to be in any place except the forefront of commercial aviation development after this war. The Civil Aeronautics Board is giving much thought and study to this certain future expansion, for, in the post-war period to come, with its economic dislocations and painful political and industrial readjustments, a strong American civil aviation will do much to cushion the shocks and can be used as a powerful instrument for rehabilitation throughout the Western Hemisphere and the world.

Mr. Speaker, after the present war is ended, the trade route of the Americas will breathe new life into both continents. As we once sent our clippers over the seas in search of new markets, we will again send our clippers of the air into far places. We will unite not only the Americas but the entire world. We will forge not only the bonds of commerce but also friendship and mutual efforts. To such an undertaking let us go forward.

Air Power and Coast Defense—Has the Bombardment Airplane Made the United States Invasion Proof?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

Mr. MUNDT. Mr. Speaker, one of the principal arguments of the let's-get-into-the-war-now speakers and writers in this country is that unless we send our soldiers and sailors across the seas to fight, this country and/or this hemisphere will be in danger of invasion. It is an argument which should be carefully examined, because if it is true, the safety and security of our country is in danger; and, in that event, every true American would shirk no responsibility and stop at no risk in protecting this Republic. On the other hand, if the argument is fallacious and misleading, it is equally important that this country know the facts before it is lured into sending its sons into the slaughter beds of Africa, Asia, and Europe to fight a war in which our national safety is not in jeopardy. America today is entitled to know the facts.

Many radio speakers, platform orators, editorial writers, and newspaper columnists are now haranguing America with hysterical portraits of our susceptibility to invasion and attack unless we are protected by the British Navy or the Chinese or Russian Armies. Civilian spokesmen for the Army and Navy Departments have joined in the scare crusade; mahogany-desk strategists and a number of retired over-age Army and naval officers have added to the defeatist chorus to the effect that this greatest of all nations in the world cannot defend itself without the aid of foreign powers ranging in distance from our shores from three to seven thousand miles. Unlike the gallant leaders of England who proclaim "There will always be an England," and very unlike Churchill, who dares the enemy to attempt an invasion, many spokesmen for the administration's foreign policy in this country weakly apologize for America's lack of self-sufficiency as they see it and cringingly cry out that "America is doomed" if those who we now support in the bloody conflict are unable or unwilling at some future time to come to our support. Leadership should be made of sterner stuff in this Republic. Surely no one is more conspicuously and certainly a defeatist than he who preaches the fatalistic doctrine that America depends for its existence and its safety on the good fortune or the good intentions of some European or Asiatic power.

But what are the facts? Is America in danger of invasion, come what will across the seas? Are the American defeatists accurate when they would push this country into the war with the argument that we had better fight when others do because we cannot protect ourselves? Hanson W. Baldwin, internationally famous military analyst for the strongly interventionist New York Times but who writes what he believes from the facts which he knows, has this to say in his great new book, United We Stand, and I quote Mr. Baldwin's studied and significant words:

The author does not know a single responsible military or naval officer or Government official who believes that this Nation is threatened by direct invasion, even if Germany wins.

Mr. Baldwin made this challenging statement several months ago, and it has never been refuted—no responsible military man has dared to take issue with Mr. Baldwin's statement.

Now, in the current issue of Army Ordnance which has as its lead article an item by Under Secretary of War Robert P. Patterson, comes evidence even more convincing than that provided by Hanson Baldwin. In this publication Lt. Col. Thomas R. Phillips, General Staff Corps, United States Army, supports Mr. Baldwin's findings in a thought-provoking article which every American citizen should read. It is gratifying to note that the career men and staff officers of the United States Army are not included among the defeatists who would label Uncle Sam before the world as the hapless and helpless step-child of a war-torn Europe. Lieutenant Colonel Phillips' article follows:

[From Army Ordnance of September-October 1941]

AIR POWER AND COAST DEFENSE—HAS THE BOMBARDMENT AIRPLANE MADE THE UNITED STATES INVASION-PROOF?

(Lt. Col. Thomas R. Phillips)

Even if the United States had no harbor defenses it would be impregnable to invasion. And this still would be true if our Navy were inferior to that of an invading power. In spite of this, a great program of harbor-defense construction is proposed and is partially under way. One wonders if this program has been devised with full realization of the ability of air power to perform many functions of harbor-defense installations. The United States is about to build harbor defenses to make the country secure for 50 years to come. Is this really looking forward, or are the harbor defenses being provided to cover the 50 years which have just passed?

The argument by which coast defenses are sold to the public is very much like the argument of the book salesman. It is not the books he is selling, but rather an education for the child. Harbor defenses are supported by the argument that they will prevent invasion of the United States. Actually they never were intended to prevent invasion. If the need for harbor defenses depended upon their ability to protect the United States from invasion, it would be very simple to prove that no harbor defenses are necessary. Land-based air power has made the United States impregnable to a sea-borne invasion.

THE LESSON OF NORWAY

The attempted counterinvasion of Norway by the British supplied the factual proof of the well-established theory that sea-borne invasions are impossible against land-based air power. This particular operation took place under the most favorable circumstances possible for the British. The Norwegians welcomed their coming and desired their help; the British did not have to contend with any harbor defenses nor enemy forces when they made their landings at Aandalsnes and Namoscs—there was nothing to oppose them until they had marched a considerable distance into Norway, where they met advanced detachments of the German Army; nevertheless the invasion failed.

Prime Minister Churchill gave as explanation for this failure "intense, continuous bombings of the bases at Namsos and Aandalsnes, which prevented the landing in those small fishing ports of any large reinforcements and even of artillery for the infantry already landed. It therefore was necessary to withdraw the troops or to leave them to be destroyed by overwhelming forces. The decision to withdraw was undoubtedly sound. The withdrawal of these 12,000 men—less than a division—was accomplished with very great skill, and, I must add, very good luck."

In other words, nothing but the "intense, continuous bombings" prevented the success of the British counterinvasion of Norway. There were no harbor-defense guns to fire against the British nor were any German troops at the harbors to give the slightest opposition to the landings. This was purely a victory of air power over a sea-borne invasion which had no aerial support.

On the German side the means to repel the invasion were quite inadequate. Germany had occupied the airdromes at Oslo and Stavanger. Oslo is 326 miles from Namsos and 220 miles from Aandalsnes. Stavanger is 260 miles from Aandalsnes and 420 miles from Namsos. Thus the German air forces operating against the British invasion bases had to operate from considerable distances. Not only that but they were very limited in numbers—to the numbers that could be placed on four rather inadequate airdromes—and were engaged primarily in supporting the ground operations of the German troops who were driving through the Norwegian valleys in an effort to reach the British.

Another factor of great importance in favor of the British was the short distance that the expeditionary forces had to go to reach Norway and the fact that their ships could approach the Norwegian coast beyond range of German bombers closely enough so that the final run to the coast could be made in darkness and without fear of bombing. Bombing was possible only after the ships reached the harbors.

It might be thought rash to conclude from a single example that impregnability to a sea-borne invasion could be considered as proved. The British effort in Norway was a very special case, however, in which every factor, except readiness, perhaps, favored the invader. If the conditions under which an invasion would have to be attempted against the United States are visualized, it will be seen that the problem of invading this country would be infinitely more difficult than was the British problem of landing troops in Norway. Leaving aside naval interference, imagine a convoy of 40 or 50 troopships crossing the 3,000 miles of the Atlantic Ocean toward the United States. The departure of such an invading force could not be kept secret. Our defending bombers would start attacking it a thousand miles from the coast. The attacks would grow in intensity as the convoy approached. The invasion might not be stopped before it reached the coast, but it would be badly damaged.

WHAT IT MEANS TO AMERICA

Imagine, then, this convoy attempting to come into a harbor and remaining practically stationary for days in narrow waters with the entire bombing force available to the United States working on it. The picture is incredible. The invasion would be doomed. No military leader would ever think of making such an attempt. The presence or absence of harbor defenses along the American coast would be of no importance whatsoever against a sea-borne invasion, as long as we possess ample land-based air power.

It may be argued that naval vessels have not been driven off the seas within bombing range in the North Sea and the Mediterranean, and that convoys are operating occasionally even in the English Channel. The reasons that this is possible will be considered in more detail later. It suffices for the present to note that these ships are subject to bombing raids for relatively short periods of time, that they first must be discovered, and that they are not tied up at docks or subject to bombardment for long periods. None of these favorable factors applies to an effort to unload troop transports nor to the continuing supply and reenforcement of troops already landed. In Norway the British landed their first troops, but could not reinforce them once the bases were discovered and watched and bombed constantly.

What leader would be willing to risk thousands of men packed like sardines in a transport under the bombing conditions that can be visualized? Churchill would not. And if these transports had to come across an ocean to be met with enormously more intense bombing, no leader would consider it. The whole business of invasion across the sea against ample land-based air power no longer is in the book of possibilities.

THE MOST IMPORTANT LESSON FROM THIS WAR

Almost no other event in the history of warfare equals this in importance. For the United States, particularly, the conclusion is transcendental. It makes it possible for this country to insure not only its own continental territory from invasion but, by the provision of a suitable air-base and airways system, to insure the impregnability of all North and South America. If this country takes advantage of the defensive powers given to it by the bombardment airplane, its impregnability to military invasion is assured in the foreseeable future.

The successful German invasion of Norway through its principal harbors—Oslo, Stavanger, Trondheim, Narvik—has been cited to prove that had Norway been supplied with adequate harbor defenses, or if those defenses had not been tricked into impotence, Norway could not have been invaded by the Germans. To quote one protagonist: "The salient fact was that the Germans went on in unopposed, tied up at the docks, put their men and supplies ashore, and proceeded to overrun the country." From this was deduced proof that had the Norwegian harbor defenses functioned effectively, the invasion could not have succeeded. Historically, however, most landings on hostile shores have been made away from harbors, and the troops have proceeded overland to capture from the rear the harbor defenses and the cities they protected. Norway did have harbor defenses, and good ones, at Trondheim and Oslo. It was easy to trick them, and once the Germans were within the harbors, these defenses no longer had any value.

Much more important was the fact that Norway had no air force. Had a Norwegian air force been in existence, it would have been able to block the German invasion of Norwegian harbors just as effectively as the German air force later blocked the British invasion of Norwegian harbors. And this would be true whether or not Norway had any harbor defenses. In the case of the ports distant from Germany—Trondheim and Narvik—an ample Norwegian air force would have made German operations in these ports impossible. They were too distant for hostile operations to be protected by German air power based in Denmark or Germany. Even Oslo is 200 miles from the Aalborg airport used by the Germans in Denmark, and a small air force should have

been able to best much larger German fighter forces that might have been used to protect the landing in Oslo. The Norwegian harbor defenses were made impotent by false messages or treachery. Within an hour, their usefulness had vanished because German forces had passed them. The air forces might have been tricked for a short time, but since air bases usually are back from the coast, their impotence would have been of short duration.

Air power has still another advantage as a defensive force. This is its ability to assemble and concentrate its entire power for operations against a single point. Harbor defenses are immovable, and the individual forts can give no assistance to the forts 50 or 200 miles away. But all the bombing planes in the nation can be concentrated so as to apply their power at the single threatened point, and this concentration can take place with almost incredible rapidity—in a day or two at the most.

Harbor defenses never were intended to prevent invasion, although they have an incidental mission of providing artillery support to the defense against landing attacks within range of their weapons. There are plenty of good reasons for constructing harbor defenses, but the prevention of invasion of our shores is the least of these and is only incidental to the others.

AIR POWER CAN PREVENT INVASION

The ability of air power to prevent invasion is the question of air power versus sea power. The present war has shown apparently contradictory results in the struggle between air and sea forces. The contradictions have been apparent only. In general, they can be explained by the time available for bombing, the distance over which bombing operations must be conducted, the number of bombers available, and the weather.

Prime Minister Churchill stated one time that 200 or 300 bombs must be dropped to insure hitting a naval vessel. This could mean a single trip by 100 to 250 planes, or 10 trips by 10 to 15 planes, or 100 to 150 trips by a single plane. If it were 15 planes making 10 trips 500 miles from the base, 10 days would be required to let this air force drop enough bombs to insure a hit on the naval vessel. It can be seen that effective bombardment of naval vessels either requires a great enough number of planes to insure hits in one or two trips or else that the target ships should be stationary in a harbor, where they can be bombed on many successive days by a smaller number of planes, if these were all that were available.

Naval vessels are much harder to hit than merchant ships or transports. Warships are armored, are usually of very high speed and capable of dodging, and have a tremendous number of antiaircraft guns to interfere with the bomber's aim. Thus, although 200 to 300 bombs may have to be dropped to attain a hit on a naval vessel, merchant ships which act as transports and are the carriers for invading forces probably would not require more than a quarter as many bombs to hit them.

CHURCHILL'S CAUTION PROVED JUSTIFIED

Prime Minister Churchill explained the failure of the British Fleet to operate in the Skagerrak on German communications to Norway as follows: "But immense enemy air strength, which can be brought to bear on our patrolling craft, makes this method far too costly to be adopted. Important forces would have to be employed in order to maintain a steady surface patrol and the losses which would have been inflicted on the patrol from the air would undoubtedly very soon constitute a naval disaster." In other words, the British patrolling vessels would have had to remain on duty in the Skagerrak subject to continuous bombing by immense air forces. The operation was impossible, and the British were correct in not making the effort.

Prime Minister Churchill's objections to operating in the Skagerrak were abundantly proved when the British Fleet operated under similar conditions in attempting to prevent the invasion of Crete. After the loss of four cruisers and seven destroyers, the fleet withdrew. Here the real factors in the question of air power versus sea power were demonstrated in one operation; namely, immense bombing forces and the fact that the ships would have to remain subject to bombing.

Malta also shows the impossibility of fleets remaining within range of large bombing forces. It is only 60 miles from Italy and is untenable as a fleet base. The fact that the British still hold it is of minor importance. It is no longer a base—it is just a piece of land. On the other, Gibraltar—750 miles from Italy—hardly has been bothered by bombing. The distance is too great for bombardment operations to be carried on with the necessary mass and continuity. Gibraltar is protected from massive and continuous bombing by distance.

THE LESSON OF SCAPA FLOW

Convoys operating in the North Sea, the English Channel, and the Mediterranean gain partial protection from the time element. By making use of darkness to pass the more dangerous areas, the convoys are within effective bombing range too short a time to be disastrously endangered, unless massive bombing forces are on hand to operate against them. There have been many ships lost and other ships injured, but the damage has not been great enough to prevent occasional passage. Scapa Flow, 300 miles from Norway, has been made untenable as a fleet base by the bombing threat. In this case, Germany has a sufficient number of bombing planes based closely enough to make the danger of remaining at the base too great for the possible military advantages that would be obtained.

In the Mediterranean, Italian air operations originally appeared to give the lie to all these contentions. Failure of the Italian air force to be more successful in preventing British convoy and fleet operations close to Italian and Libyan coasts was one of the major mysteries of the war. The British even penetrated the Adriatic (at night), December 19–20, 1940, and bombarded the Albanian seaport of Valona without aerial interference by the Italians. It is now apparent that Italian air power was not operating in sufficient mass in these waters to perform its missions effectively. When it was reinforced by German squadrons, the last British convoy to pass through suffered such extensive losses that no more convoys have been attempted. The war has showed one fact conclusively—air power dominates sea power in narrow seas and near the coasts.

Was not the insufficiency of Italian air power in the Mediterranean one of the inherent weaknesses of air power? And if air power is depended upon, are we not apt to find that it may be unavailable at the critical time? Harbor defenses are so comforting. The big ugly-muzzled guns are always there, ready and waiting—a definite assurance of protection for one little spot for all time. Doubt as to the availability of air power can be dismissed as far as the United States is concerned. We shall always have it in the future in ample quantity. And instead of a dozen or two dozen guns defending a harbor, we shall have 2,000 or 4,000 bombers ready to be concentrated for the defense of any point, not of harbors alone, but of all the beaches and all the coasts.

THE PASSING OF HARBOR DEFENSES

Harbor defenses in the past were constructed to perform the following functions: First, to permit movement of our naval forces in and out of harbors; secondly, to protect harbor facilities and ships in the harbor from naval gunfire and torpedoes; thirdly, to prevent enemy ships from entering the harbor; fourthly, to furnish incidental support to defense against landing attacks within range of the defense guns.

What has air power done to these missions? If a hostile fleet cannot remain on guard outside a harbor to prevent the exit or ingress of our own fleet because of the threat of bombing, then no harbor defenses are necessary for that purpose alone. Except for hostile air power the British fleet might have been maintained close to the Skagerrak or to the Kiel Canal or to Heligoland. This mission of harbor defenses is ended. Air power can perform this mission far more effectively than guns ever could since guns never had the necessary range to provide ample maneuver room for a fleet leaving a harbor.

Protection of ships and harbor facilities from naval gunfire and torpedoes is still as necessary a function of harbor defense as ever. The European war has shown that ships can stay within bombing range at night long enough to make raids on shore installations. The French and British both raided Italian shore installations and escaped with minor damage. The British have raided the Dodecanese and the Libyan coast and have escaped without serious injury. The British bombarded the German-held airdromes at Stavanger from cruisers for several hours. Thus the experience of the European war seems to prove that air power is not yet sufficiently strong to prevent raids and naval bombardments. Harbor defenses must be provided for this purpose.

Whether or not air power can deny enemy ships access to harbors and adjacent waters depends upon the nature of the harbor. In such a harbor as Puget Sound, where hostile ships would have to steam 300 or more miles to get in and out, and where they never could be lost sight of in the narrow waters, air power should suffice to entrap the raiders. They might get in, but they never could get out. In the case of shallow harbors easy of access, the problem would be similar to that of a naval raid; some guns would be required to prevent a raid, but air power would be ample to prevent the continued use of the harbor.

AIR POWER AIDS OUR DEFENSE—WEAKENS ATTACKERS

The question of the ability of air power to prevent invasion already has been discussed. Harbor defenses never were built primarily with that end in view, and this question certainly needs no consideration in their construction in the future. This affirmation, however, applies only when the defensive air power is immeasurably superior to that which can be brought against it. The case of a German invasion of Great Britain across the narrow English Channel is different from an invasion across the ocean, since in the former case the invader's air force can operate from land bases. Against some of our foreign possessions an attacking naval force might be able to bring superior air power on carriers; hence, all the old missions of harbor defense apply with full force to them.

In the July–August 1941 issue of Army Ordnance (vol. XXII, No. 127, p. 46) General Hagood gave a 13-point program for coast defense on which $200,000,000 would be spent. There was little to cavil at in this program except that it appears to have been based on the obsolete missions of harbor defenses. For example, General Hagood recommended new harbor defenses in the Houston-Beaumont area of Texas, with special reference to the protection of the oil fields. Beaumont and Houston are inland ports with narrow channels leading to them. No naval force or transports could live for 24 hours in these channels under bombing attack.

This proposal obviously was intended to prevent a sea-borne invasion from capturing the oil fields, since they are not close enough to the coast to be bombarded. Air power not

only has made such an operation impossible but new American defenses closing the gaps into the Caribbean through the Greater and Lesser Antilles will make this sea, through which the Gulf ports of the United States must be approached, a trap which no hostile naval force or transports ever would dare to enter.

The West Indies, if fully exploited to close the Caribbean, furnish complete protection for the American Gulf coast. Not only are no new harbor defenses needed, but those now in existence have little further reason for being maintained. And not only do American defenses along the Antilles protect the Gulf coast, but they also secure the northern shores of Venezuela and Colombia, the Panama Canal, and the eastern coast of Central America and Mexico.

On the other hand, many new seacoast gun installations for the protection of factories and bases from naval bombardment might very well have been recommended. Naval air-patrol stations will be constructed at many new points in continental United States and the Caribbean Sea; since these are for seaplanes and are close to the coast, they are subject to naval bombardment during raids and must have seacoast guns to keep enemy raiders beyond range.

Naval bombardments and raids are much more probable now and will be waged against many objectives that would not have been attacked in the past. International law formerly exercised some control against the bombardment of open towns, even though factories were engaged in producing war materials in them. Bombardments once were restricted, but air warfare now has broken down all scruples. Today any factories or facilities of military value close to the shore are apt to be bombarded from the sea. These will have to be protected along with all new naval shore stations. Thus many new harbor defenses are required, but at different points than commonly visualized. On the other hand, a number of the old harbor defenses constructed for now nonexistent missions do not need modernizing. There is no need to destroy them since their maintenance on a caretaker's status and eventual occupancy in time of war by the National Guard does not represent a serious drain, and they still aid in preventing naval raids.

AIR POWER CAN DEFEND THE WESTERN HEMISPHERE

Can we depend upon the present ability of air power to provide for certain of the functions of coast defense, or will conditions change so rapidly that air power will not be able to fulfill them in the future? Possibly naval protection against aerial bombing is at its lowest point at the present time. Most naval vessels now in commission were built at a time when aerial bombing was not a serious threat. The result is that they are poorly protected and not very effectively armed against it. Naval protection may improve so greatly that bombing will not remain a serious threat, at least against battleships.

However, even if this takes place, the present relationship between air power and sea power will not be changed. Transports and small naval vessels will continue to be vulnerable, even though they may be better armed in the future. On the other hand, bombing accuracy may improve fast enough to overcome advances in protection. Here again, the present relationship may be modified slightly, but the fundamental factors are not likely to change. The only foreseeable change is that improvement in bombing accuracy and the availability of large numbers of bombing planes may make naval raids less likely, hence there will be a smaller requirement for coast-defense protection against them.

THE BOMBER HAS MADE AMERICA IMPREGNABLE

Air power has not superseded coast defense, but it can perform some of their functions more effectively than guns ever did. On the other hand, the increase in naval air installations on the shore, together with acceptance of bombardment of nonmilitary installations as legitimate targets, makes more harbor defenses necessary for their protection. Any harbor defenses constructed or modernized should take into account the ability of the bombing plane to perform certain of the old missions.

The bomber has made the American coast impregnable to invasion. This is the most important military fact that can be deduced from the European war. If new harbor defenses are to be constructed, let them be built with our eyes on today and tomorrow and not on yesterday.

TWO LESSONS FOR AMERICANS TO PONDER

Mr. Speaker, Lieutenant Colonel Phillip's scientific analysis of the ability of America to protect both itself and the Western Hemisphere as the result of the development of the bombing plane deserves the careful study of us all. I hope that both Congress and the country will ponder its conclusions and its recommendations thoughtfully and well. It is written by a man who knows. It is written by a man who cares. It is written by a man who dares to tell the truth. Unless the evidence presented in the foregoing article can be disproved, we Americans should tighten our belts and complete the development of a 100-percent defensive air force for this country without delay.

We need not gamble with fate nor risk our security with wars abroad if we will equip ourselves with sufficient bombing and other war planes, provide fields for their operation, and train pilots for their use. This, today, is the No. 1 job of the United States and neither desire for private profits, strikes for personal privileges or higher wages, sentimental attachments to foreign nations, or the wailing of defeatists who would tell us "it is all of no use—America is helpless to defend itself" should deter us from our job of making this Republic and this hemisphere impregnable.

And while devoting ourselves to the building of these defenses we can continue to make available to our friends across the seas all the supplies not needed for the No. 1 job of self-defense for this half of the world. But as self-defense is the first law of nature we must not permit our sympathies or our zeal to lead us to neglect the development of our own defenses now that science has pointed the way to make us secure and safe. Only through indifference, ignorance, or inattention to our own needs can America really become the helpless and defenseless weakling which some of the war-now speakers and writers would picture it as being.

A second lesson also stands out from Lieutenant Colonel Phillip's treatise and that is that just as American bombers can repel foreign invaders by making the attempt too costly in human lives so, too, can foreign fighting planes, based on foreign shores, be used to slaughter in countless thousands any American expeditionary force which we might send an equal distance across the seas to invade some foreign continent. Only governments which value the lives of their citizens most lightly will attempt transoceanic invasions against land-based fighting and bombing planes in this modern era of the supremacy of aviation in the business of self-defense which is the No. 1 responsibility of any government.

Ships Can Be Built in the Great Lakes

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

EXCERPT FROM AN ARTICLE IN THE MARINE JOURNAL

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein a part of an article which appeared in the Marine Journal of June 15, 1941, entitled "Ship Transfer by Drydock." This article sets forth the manner in which ships were built in the Great Lakes during the first World War and their delivery at ocean ports.

It further brings to our attention that there will be a shipping shortage of major proportions, even more acute than during the years 1916, 1917, and 1918, due to the losses through the sinking of vessels in this, the second World War.

The article follows:

[From the Marine Journal of June 15, 1941]

SHIP TRANSFER BY DRYDOCK—FEASIBILITY OF BRINGING SHIPS FROM GREAT LAKES TO TIDEWATER AT THE GULF OF MEXICO ON COMPOSITE BARGE DRYDOCKS, UTILIZING THE CHICAGO DRAINAGE CANAL, ILLINOIS AND MISSISSIPPI RIVERS

(By W. H. Rutland)

If, as history goes, it repeats events of the past, then this country must prepare itself for a shipping shortage of major proportions, even more acute than that which confronted Great Britain and the United States during the years 1916, 1917, and 1918.

In order to partially replace the tonnage sunk, or destroyed, during the World War, it was found that unusual and extraordinary methods of expediency had to be employed. On the Great Lakes there was a reservoir of ships to draw from, but in so doing great obstacles had first to be overcome. Among others, the following may be mentioned:

1. Limitations of length, width, and depth imposed by various locks in the St. Lawrence River, the controlling dimensions of which were and are: Length, 270 feet; breadth, 45 feet; and depth, 14 feet.

2. Insufficient structural strength of lake vessels to withstand the rigors imposed in ocean trades, and, by reason of this fact, it was necessary to reenforce the garboard, bilge, shear, and the deck strakes.

3. The complete outfitting with salt-water equipment, particularly with respect to stern tubes, pumps, seacocks, and bilge piping.

4. There were more than 50 of these lake vessels which were brought to the seaboard during the years 1916, 1917, and 1918 ranging

in length from 225 to 875 feet. Out of this number more than a dozen of lake-type ships had to be cut in half in order to pass through the 270-foot locks intervening between Port Colborne and Montreal. Seven of these "oversize" ships were *A. W. Thompson, Samuel D. Warriner, E. C. Pope, Maruba, Mohawk, Seneca,* and *Inland.*

After arrival at Montreal, or Levis, Quebec, the vessels were rejoined together and outfitted as seagoing ships. In addition to the fifty-odd boats which were taken from the Lakes and subsequently employed in ocean trading, 430 vessels were built on these inland seas during the years 1917 to 1921, both inclusive, for ocean service, to wit:

Name of builder and location	Number of ships	Dead weight tonnage
American Shipbuilding Co.:		
Chicago	27	102, 100
Cleveland	29	109, 550
Detroit	71	273, 650
Lorain	51	195, 200
Superior	44	186, 400
Total	222	808, 100
Globe Shipbuilding Co., Superior	19	71, 450
Great Lakes Engineering Works:		
Ashtabula	26	98, 850
River Rouge	58	225, 550
Total	84	324, 400
Manitowoc Shipbuilding Co., Manitowoc	35	108, 250
McDougal-Duluth Co., Duluth	34	124, 050
Saginaw Shipbuilding Co., Saginaw	18	66, 300
Toledo Shipbuilding Co., Toledo	31	109, 950
Recapitulation	430	1, 612, 500

From the foregoing performance it is apparent that shipbuilding establishments situated on the Great Lakes not only have the capacity to construct vessels in large numbers but also of a size much larger than boats built during the World War period for ocean service.

Pamela Hollingworth

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

Mrs. ROGERS of Massachusetts. Mr. Speaker, early last evening I was overjoyed to receive word by telephone from Joseph E. Hollingworth that his little 5-year-old daughter, Pamela, had been found, alive and well, after being lost for more than a week in the dense forests of New Hampshire. This little child, the daughter of one of my friends and constituents, Mr. Joseph E. Hollingworth, of Lowell and Dunstable, Mass., strayed away from a picnic at White Ledge in the New Hampshire woods a week ago Sunday. Since that time, every foot of the densely wooded White Mountain National Forest has been searched by men of the United States Army, by rangers of the Forest Service, by C. C. C. boys, and by hundreds of Lowell men and boys, friends of the distraught father and mother, all of whom trudged the woods to the point of physical exhaustion to find the little girl. The Red Cross was there with food and first aid. That she was found alive and well was a miracle.

The soldiers from Fort Devens were the first Army men to arrive for the search, sent by General Wilby, of the First Corps Area Headquarters, and by Colonel Smith, the commander at Fort Devens. Men arrived from Portland, Maine, sent by General Terry, head of the Coast Artillery at Boston, and General Garrett, of the Coast Artillery station at Portland, Maine. General Garrett made several visits to the scene of the search and Major Spencer, of the Coast Artillery, was in constant supervision. The spirit of the men was noteworthy. When it was suggested that certain soldiers go back to Portland because their work had been so strenuous they begged to remain and carry on.

One of my purposes in calling this to the attention of the House is to commend the searchers for their untiring efforts, their persistence in the face of an almost universal belief that further search was futile. I visited the locality and saw with my own eyes the efficient, well-organized manner in which the search was conducted. The highest praise is due every man and boy who participated. The United States Army responded quickly and willingly to the request for men, and hundreds of soldiers were kept at the task of combing the woods. The United States Forest Service, under the direction of the forest supervisor of the White Mountain National Forest, deserves much praise and commendation.

The child was found by an enrollee of the Civilian Conservation Corps, a member of camp P-61, of North Haverhill, N. H. While he will undoubtedly receive much credit for finding the little girl, each of his comrades of the C. C. C. should have equal praise, as well as the project superintendent who directed the men.

Equal praise should go to the Army for its efficient and tireless work, and to the forest rangers, under whose direction the search was carried on. It must be remembered that the child was found in a very rough section of the country. It was heavily timbered and covered with deep bush. There were no residences, nor clearings. In some places it was necessary to chop down trees and clear the underbrush in order to carry on the search.

It was the inspiration of a brave father and mother that carried these searchers on to final success. It was the faith the mother and father had that little Pamela was alive—their courage and insistence—that led and spurred the searchers for 8 days to their difficult and constant task. The father told me, "I knew she was alive. She is fearless and intelligent in doing the best for herself in the woods. When found, she said to me, 'Daddy, I have waited for you.'" It proved his faith was well-founded.

I know that my colleagues in Congress feel proud, as I do, that Government agencies have done so well in a humanitarian cause. It is noteworthy.

Casey in the Box—1941

EXTENSION OF REMARKS

OF

HON. JOHN J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

POEM BY MEYER BERGER

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the New York Times of Monday, October 6, 1941:

[From the New York Times of October 6, 1941]

CASEY IN THE BOX—1941

(By Meyer Berger)

The prospects all seemed rosy for the Dodger nine that day.
Four to three the score stood, with one man left to play.
And so, when Sturm died and Rolfe the Red went out,
In the tall weeds in Canarsie you could hear the Dodgers' shout.

A measly few got up to go as screaming rent the air.
The rest were held deep-rooted by fear's gnaw eternal at the human breast.
They thought with only Henrich, Hugh Casey had a cinch.
They could depend on Casey when things stood at the pinch.

There was ease in Casey's manner as he stood there in the box.
There was pride in Casey's bearing, from his cap down to his sox
And when, responding to the cheers, he took up his trousers' sag,
No stranger in the crowd could doubt, he had them in the bag.

Sixty thousand eyes were on him when Casey toed the dirt.
Thirty thousand tongues applauded as he rubbed his Dodger shirt.
Then while the writhing Henrich stood aswaying at the hip,
Contempt gleamed high in Casey's eye. A sneer curled Casey's lip.

And now the leather-covered sphere came hurtling through the air
And Henrich stood awaiting it, with pale and frightened stare.
Close by the trembling Henrich the ball unheeded sped.
"He don't like my style," said Casey. "Strike one!" the umpire said.

From the benches black with people there went up a muffled roar
Like the thunder of dark storm waves on the Coney Island shore.
"Get him!" "Get him, Casey!" shouted someone in the stand.
Hugh Casey smiled with confidence. Hugh Casey raised his hand.

With a smile of kindly charity Great Casey's visage shone.
He stilled the Faithful's screaming. He bade the game go on.
He caught Mickey Owen's signal. Once more the spheroid flew,
But Henrich still ignored it. The umpire bawled, "Strike Two!"

"Yay!" screamed the maddened thousands,
and the echo answered, "Yay!"
But another smile from Casey. He held them
under sway.
They saw his strong jaws tighten. They saw
his muscles strain,
And they knew that Hughie Casey would get
his man again.

Pale as the lily Henrich's lips his teeth were
clenched in hate.
He pounded with cruel violence his bat upon
the plate.
And now Great Casey held the ball, and now
he let it go.
And Brooklyn's air was shattered by the whiff
of Henrich's blow.

But Mickey Owen missed this strike. The
ball rolled far behind,
And Henrich speeded to first base, like Clip-
per on the wind.
Upon the stricken multitude grim melan-
choly perched.
Dark disbelief bowed Hughie's head. It
seemed as if he lurched.

DiMaggio got a single. Keller sent one to
the wall.
Two runs came pounding o'er the dish, and,
oh, this wasn't all,
For Dickey walked and Gordon a resounding
double smashed.
And Dodger fans were sickened. All Dodger
hopes were hashed.

Oh, somewhere north of Harlem the sun is
shining bright,
Bands are playing in the Bronx, and up there
hearts are light.
In Hunts Point men are laughing, on the
Concourse children shout.
But there is no joy in Flatbush. Fate had
knocked their Casey out.

Repeal of the Neutrality Act

EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

STATEMENT OF HON. WILLIAM H. LARRABEE

Mr. LARRABEE. Mr. Speaker, under leave to extend my remarks, I include the following statement, which I have just issued, stating my position on the question of the Neutrality Act:

It is apparent to all persons who consider, without bias or prejudice, the recent developments in the international situation, that the time has come when the Congress of the United States should consider the drastic revision or outright repeal of the so-called Neutrality Act enacted in 1935 in a sincere attempt to prevent the occurrence of incidents which would lead to our involvement in the foreign conflict.

It is further apparent that we cannot, by legislation, govern the actions of foreign conquerors who have set forth on a program of world conquest and who will not hesitate to mark our own Nation as their objective whenever the time shall arrive which they believe to be to their advantage.

In 1935, when this country, endeavoring to remain aloof from Old World differences, partially abandoned its adherence to the century-old doctrine of freedom of the seas, it did so merely to safeguard American neutrality and not as a retreat, in any sense of the word, from our rights under international law.

Under the Constitution of the United States the President is vested with primary authority to conduct our international relations, but in the enactment of the Neutrality Act the Congress provided the President with new instruments intended to aid him in maintaining our neutrality.

The enactment of the Neutrality Act, worthy though its purpose was at the time, has not made us immune from attack or the danger of involvement in the war. Realizing that the struggle of all the democracies in the world against ruthless aggression is also helping to avoid the threat to our own way of living, the United States, by act of Congress known as the Lease Lend Act, adopted the policy of extending all-out aid to those countries who were and are valiantly holding back the hordes of Hitler.

Our purpose in this was not only to keep America out of the war but also to keep the war away from America.

The Lend Lease Act was given full and complete debate in both Houses of Congress before being submitted to a vote, and passed both Houses by an overwhelming majority. Thus again was demonstrated that we rely on the democratic processes for the establishment of our basic policy.

In addition, the Congress has appropriated billions of dollars, not only to arm our Nation for defense against any possible attack but also to extend aid in the form of materials and implements of war to those countries resisting aggression of the dictators.

It should be remembered that under the terms of the Neutrality Act it was made unlawful for any American individual or corporation to loan money or extend credit to any nation at war and also unlawful for any American individual or corporation to sell war materials to any nation at war, except for cash.

Both of these provisions, although still in effect, for all practical purposes are meaningless. It is obvious that the countries who are so seriously in need of assistance in the way of materials and implements of war would have no reason to try to secure them from American individuals or corporations when, as a matter of fact, the American Government itself, through its duly elected representatives, has decreed that our country shall extend them such assistance through the Government itself.

At the time of the first amendment of the Neutrality Act, in February 1936, although I favored the measure in principle, I believed that it would not provide permanent protection. In commenting on the measure at that time I made the following statement:

"The purpose of this law is not to provide permanent neutrality laws for this Nation, but to provide temporary instruments believed sufficient to keep the United States from being drawn into foreign entanglements until such time as Congress, through its properly designated committees, has sufficient opportunity to present sound, permanent plans.

"I have also felt that in the light of existing conditions there is grave danger that we might endanger the neutrality which we seek to maintain by going too far with intended prohibitory measures. I am firm in the belief that there is always danger in too much legislation."

The question at this time—and it is for Congress to decide—is whether or not present conditions make it advisable or desirable to modify or repeal the Neutrality Act.

I feel that the act having been rendered inoperative to a large extent by the enactment of the Lease Lend Act and the remaining provisions serving only as a departure from our rights under international law should be repealed.

I cannot but feel that the restrictions and prohibitions voluntarily put upon American citizens have not kept us from the danger of war, but, on the contrary, in a measure, have tied our hands in the carrying out of a national policy of aiding those to whom we look to keep the war away from our shores.

The Neutrality Act prohibits the arming of our merchant vessels, even for their own protection. The desire to protect ourselves from unprovoked attack is inherent, and I believe that our merchant ships which have been ruthlessly attacked on the high seas, not in combat zones but in purely defensive waters, should be permitted to arm for their own self-defense and protection. That is our right and privilege under international law.

And, after all, it is only reasonable to assert that after we have embarked on a policy of aiding those countries to whom we are furnishing materials of war it is extremely illogical to permit those materials, for which we are spending billions of dollars, to be lost at sea.

For these reasons I feel that our present neutrality laws serve no useful purpose and do not in any way aid us in avoiding the dangers of involvement in the war, and should be speedily repealed.

Double Standard

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

EDITORIAL FROM THE NEW YORK TIMES

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

[From the New York Times]

DOUBLE STANDARD

Administration spokesmen have made eloquent statements in the last few weeks against any attempt to include control of wages in price-control legislation. They have argued, as Secretary Morgenthau put it, that while prices should be fixed, wages should not be, because there is "a fundamental difference" between a commodity and personal services—"one is a human being and the other brick and mortar." "In free countries," said Mr. Morgenthau, "labor is not a commodity, human beings are not property, and they should not be treated as such." Leon Henderson, the Federal Price Administrator, supplemented this by declaring that direct control of wages is a device of totalitarian countries.

Those who argue against direct control of wages, even in wartime, can undoubtedly present a strong case, for such an undertaking would be formidable, and full of pitfalls and dangers. But apart from whether or not they are right on this point, it is clear that most administration spokesmen are applying a double standard. For while they harbor such fears of fixing wages, they have no qualms whatever about fixing prices.

The kinds of distinctions they draw are commonly false ones. What the worker has to sell is not himself, as Mr. Morgenthau im-

plies, but his services. That is also primarily what the professional man, farmer, manufacturer or retailer has to sell. Mr. Henderson points out, rightly, that direct wage control implies the right to say what the income of individuals or groups should be; but he fails to point out with equal force that direct price control also implies this right.

Administration spokesmen, in short, have put themselves in the position of saying that what is sauce for the goose is not sauce for the gander. They eloquently expound the voluntary theory of government as applied to workers and just as eloquently support the compulsory theory as applied to manufacturers, retailers, and employers. But the economic system is a closely interdependent organism. We risk strains and eventual disruption if we attempt to keep it half frozen and half free. Whether we elect to choose during the present emergency the voluntary or the compulsory principle, or attempt to find some set of compromise principles in between, we must apply those principles without political discrimination in favor of or against any group.

Progress of the Defense Program

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

RADIO ADDRESS OF HON. EDWIN ARTHUR HALL, OF NEW YORK

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over station WAGE Monday evening, October 6, 1941:

Men and women of up-State New York, once again it is my privilege to send my weekly transcription to station WAGE. Through the courtesy of the management of this great station I have been able throughout the past 2 months to throw my voice hundreds of miles over this great State. I have been attempting to pass on to my listeners information which comes to me first-hand and which will be of particular interest to the folks back home. At this time I want to thank Mr. William Lane, station manager, and Mr. Jack Curran, program director, for making this time available. The comment I have received in the mails is testimony enough of the widespread attention which this program is receiving. Let me also take this opportunity to thank my listeners.

Last Thursday, along with Vice President WALLACE, several Members of the Senate, and a large number of other Congressmen, I visited Fort Belvoir, Va. The reason for this visit was to examine the equipment and to witness the military maneuvers staged by the soldiers of that camp.

After having seen the most remarkable demonstration it has ever been my privilege to view, I came to some pretty sudden conclusions. The United States, in a year's time, will have one of the finest armies in the world. To some that may seem like a strong statement, but after viewing the careful, painstaking, and intensely thorough preparations that are being made, even in a comparatively small unit like Fort Belvoir, I am of the opinion that this Nation has caught the spirit of the national-defense program.

To begin with, the United States Army has the finest personnel ever gathered together. Although a conglomeration of races and environments, the young men who are answering the call to patriotic duty possess native intelligence, vigor, and determination. All reports that have come to my ears of the softness and flabbiness of our selectees now seem like nonsense after actually seeing these boys go through their routines of training, work, and play.

All members of the official party were conducted to Fort Belvoir from Washington in busses. Upon our arrival there we were escorted by trim-looking officers to the parade grounds where every type of field and antiaircraft gun was drawn up in impressive array. We examined numerous types of machine guns, Garand and Springfield rifles, and large sharp-nosed bullets capable of piercing the armor of tanks. Then there was a new type of mortar with improved sights for hitting targets beyond hills. We found several different sizes of antiaircraft guns capable of keeping airplanes at a high altitude and thereby rendering them harmless, and also those designed to bring down low-flying craft. We saw huge howitzers and looked into their long barrels and marveled at the size shell which they could throw 15 miles. Although it was my hope and prayer that these deadly and ponderous weapons might never be used, at the same time I was inwardly thankful that our Nation is producing them in profuse numbers in order to protect our shores.

The party then moved on to examine a field photography truck. Our group picture was taken, and within an hour this complete unit of multilithing and multigraphing had turned out many photos of us. In time of battle these trucks act as eyewitnesses and preserve important scenes and records.

We also were shown a $7,000 Red Cross ambulance with elaborate modern equipment. There were officers' field cars, giant supply trucks, and a number of small cars called Jeeps used to transport three or four men quickly and easily over rough terrain. After this emergency, as one officer remarked, the public will probably be able to buy these Jeeps at a nominal sum because there will be so many produced.

Most interesting of all the equipment, to me at least, was a large truck with windmill-like arms, antennas, and complicated gadgets for locating airplanes. This particular device, we were told, had saved London from continued severe bombings and had enabled antiaircraft fire to be most effective upon Nazi planes.

Next we were escorted to a cross-country runway where we saw the young soldiers undergoing a stiff test of endurance. They were started out in groups of six and had to run down a long rough hill, then over a row of logs for hurdles They then had to climb several difficult knolls, jump over rocks, scale a wall, cross a difficult stream by swinging like Tarzan across several overhead branches and continuing on over other obstacles. The officer told us that this was a real conditioning experiment and said that the boys were started out in shorts and gym shirts but as time went on and they toughened up they were gradually given more and more equipment until finally they had to make the run with 40-pound packs and rifles. After seeing the way most of the boys took it, I feel sure that they are rapidly getting into fine physical condition.

After this I was shown a large field with hundreds of young men in blue carpentry uniforms busy with hammers and saws assembling temporary sheds and small houses. The officer made it plain that just as soon as they had finished these buildings they would tear them down again and tomorrow another group would come to repeat the same process. Someone made the remark that after several weeks of building and tearing down the boards must look like swiss cheese, but it was all a part of the careful training that these young men are undergoing. I might add that Fort Belvoir is an engineers' replacement center specializing in training the vanguard of a modern army. It is the engineers, as you know, who precede the mechanized divisions, building roads, camps, and constructing bridges for both men and equipment.

One very interesting sight was seeing an Engineer Corps dash down to a stream and in about 5 minutes build a simple foot bridge over which a single column ran at top speed. This same company built a pontoon bridge to carry loads of 20 tons, which would include the lighter tanks and antitank trucks. This last operation was completed in 16 minutes. This is all the more remarkable in a real war if one considers that the engineers almost always do their work under machine-gun and rifle fire.

Our visiting party was then given a treat to Army fare and ate a hearty meal out in the open, waited on by cooking units of the engineers company.

In the afternoon we were given the real treat of the day and what I had been waiting for ever since the defense program started to work. We were escorted to the top of a hill overlooking miles upon miles of flat partially wooded, partially open country. To our rear the company commander, with the aid of a loud speaker, gave a very vivid and play-by-play description of a strangely realistic mock war between the Blue and Red Armies. After a demonstration which showed just how much an Army tank can take, and what punishment its crew will endure, the battle began in earnest. At a spot some 10 miles away we could see the Blue infantry approaching across open fields with their artillery pounding away at the Red defenders. We saw several pill boxes belonging to the Reds surrounded by flame throwers, and after the occupants had surrendered we saw the pill boxes blown high in the air by TNT. On came the Infantry then firing blanks but making the air resound with their fusillade. Then a group of Red tanks rushed into the field and started in the direction of the oncoming soldiers. They were stopped, however, by carefully laid tank mines. However, the Red machine-gun nests were able to hold the charging soldiers at bay for some time, but suddenly a large number of troop transport planes came from the hills beyond the Blue lines and several hundred Blue parachute troops floated down from a low altitude. This was my first sight of "para" troops, and from what I could see the American Army will do the proper thing to train many thousands of these. They landed in a compact group in a nearby field and immediately proceeded to set up machine guns which were also dropped from the planes. However, by that time a Red motorcycle regiment charged from the other side and swooping down upon the field where the paratroops had landed, they immediately proceeded to throw hand grenades with such devastating effect that the Blue paratroops soon surrendered.

The situation, however, was far from encouraging for the Red defenders, because at this point a swarm of Blue tanks had swept across the intervening 10 miles where the Blue infantry had originally started and were bent upon exterminating the remainder of the Red Army and penetrating the remainder of Red territory. Suddenly from behind, scores of antitank cars armed with large guns heretofore described, dashed into battle, and the smoke of their fire was so thick that it was impossible to tell what

damage they were doing. However, as soon as the confusion was over and the smoke had lifted it was found that the Red defenders had been victorious by the very strength of the antitank guns, and the field was strewn with tanks of all sizes put out of order by their penetrating shells.

Upon my return to Washington I felt extremely relieved. If I had had any misgivings about the progress which is being made in the defense program, as far as the Army is concerned at least, they have disappeared. If this progress continues, and if this demonstration of strength is augmented thousands of times, it will grow from several companies into hundreds of divisions. I repeat that in another year the United States will be on a par with any army in the world, providing every part of the Army develops as fast as the engineering replacement center at Fort Belvoir. This great Army and the already powerful Navy reaching out into the waters of both the Atlantic and Pacific will constitute a source of protection to the American people which will secure them against the ruthless aggressors who are today overrunning the continents of Europe and Asia. With the finest manhood in the world trained to use the volume of equipment which only a great industrial nation like the United States can produce, this country will continue to defend her Constitution and her glorious flag against those who would seek to deprive free men and women of the privileges and the liberties which this great Nation has guaranteed them for over 150 years.

The Truth About Oleo Versus Butter Fight

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

Mr. GEHRMANN. Mr. Speaker, since the dairy representatives were here about 2 weeks ago, to confer with Mr. McNutt regarding the oleomargarine standards set by his department much pro and con publicity has been devoted to this all-important subject.

Mr. Ralph E. Ammon, director of the Wisconsin Department of Agriculture, who is chairman of the United Dairy Committee, representing the entire dairy industry of the United States, has prepared a statement of facts bearing on this controversy. As I pointed out in an address I made here 2 weeks ago the dairy farmers are not attempting to injure the cotton or any other group of farmers. We all know that all the farmers have had to struggle for existence the last dozen years, and that hundreds of thousands lost their homes and their entire life's efforts and are now dependent upon relief or charity. So we do not want to create the impression that if oleomargarine were used, which will naturally replace that much butter, the cotton or any other group of farmers would be better off. Records show that the southern farmers received 100 times as much income from dairy products as they did from cottonseed oil used in oleomargarine.

It is not the southern farmer that is making all this noise and spreading this propaganda, but it comes from the oleo manufacturer that is not interested in any particular group of farmers, but is only interested in the profits that have been huge, but will be enlarged many times if they are permitted to camouflage their product so that it will be almost impossible to distinguish it from the genuine butter derived from the dairy cow.

I ask unanimous consent to include the brief prepared by Mr. Ammon, that I am certain will answer many questions that are not clear to many Members.

The claims made by those favoring this imitation and the answers or explanations thereto follow:

Certain contentions have been set forth by oleo manufacturers in an attempt to convince the public that the dairy industry is wrong in its attitude toward the new standards promulgated for oleomargarine.

The following are some of the contentions offered in defense of the oleo order and oleo propaganda:

1. Contention that the new standard requires oleo "to stand on its own feet."

This contention is exceedingly fallacious.

The new standard permits the manufacturer to use the same size and shape as a pound of butter, to add butter color, to add butter flavor, to use 9,000 U. S. P. units of vitamin A, to add butter itself, and to use benzoate of soda as a preservative.

Each of these, with the exception of the preservative, is an attempt to produce a product that can be sold as butter.

There are other attractive sizes and shapes, other appealing colors, other appetizing flavors.

Oleo could come in a square pound, could be peanut or peach flavor, could be peach or strawberry color. No one could say that any of these would be unappealing.

But any one of them would clearly distinguish oleo from butter. Therein lies the whole battle between butter and oleo. The butter industry wants the two products so made that the consumer can readily distinguish between them by sight and taste. The oleo manufacturer does not want that.

This fact strips from the oleo industry any right to claim persecution. It would be as logical for a horse thief to claim persecution because he isn't freely permitted to steal horses.

2. Contention that oleo is legally an imitation butter. This contention is based on the law of 1886 which legalized the manufacture of oleo.

This contention fails to hold, however, because the same law of 1886 placed a 6-cent tax on yellow oleo to dissuade the manufacturer from imitating the butter color. Obviously, the Congress of 1886 did not intend that oleo should fool the consumer; therefore it expressly penalized the use of butter color.

3. Contention that the new standard is a protection to butter in that it requires correct labeling of oleo.

This is a false contention. When the carton is removed in hotels and restaurants the label disappears.

Secondly, regardless of label, it will be sold to poor people as butter because it looks and tastes like butter.

Thirdly, the label does not tell the consumer all, because it does not state whether the animal fat in oleo comes from the hoofs, the intestines, or the neck of the animal.

4. Contention that oleo is manufactured only for poor people.

The oleo manufacturers have announced a $1,500,000 advertising program in magazines and on the air. Draw your own conclusions.

5. Contention that sale of oleo is a boon to cotton farmers.

In 1939 about one-sixth of the oil going into oleo was imported.

The new standard provides that either animal or vegetable fats may be used in ratio of 1 to 9 or 9 to 1 or anywhere in between. It is possible for the manufacturer to use 90 percent gut fat to 10 percent vegetable fat, and that 10 percent is just as likely to be soybean oil or coconut oil as cottonseed oil.

The records show that in 1939 southern farmers received 100 times as much income from dairy products as they did from cottonseed oil used in oleomargarine.

In many counties of the South the farmer gets nothing from the cottonseed except the free ginning of the cotton. The cotton farmer is not the one who makes the profit from oleo.

This is not a battle between the dairy farmer of the North and the cotton farmer of the South; it is a battle between the dairy farmers of America and the oleo manufacturers of Chicago who would by deception take the dairy farmers' market.

6. Contention that because of the present national-defense crisis we must use a substitute for butter.

Poppycock. There is a storage holding of 200,000,000 pounds of butter in America, an all-time high and 50,000,000 pounds above holdings in the so-called surplus days.

7. Contention that the 6-cent tax is protection against the use of butter color.

This is true at present, but there has been and will be bills offered in Congress to remove this tax. That was a part of the general scheme to follow the enactment of the new standard.

It is obvious that the main purpose of the tax on yellow-colored oleo was to prohibit the color rather than raise money.

There should be a law that straightforwardly prohibits the use of butter color and butter flavor by an imitation product.

8. Contention that the new standard won't hurt the dairy industry.

That is plain bunk. The oleo manufacturers will spend millions in advertising and premiums to replace butter with oleo. They will spend millions to deceive the consumer into thinking that the imitation is just as good as the real thing. Millions of people will be deceived. Three million dairy farmers and their families will be robbed in order to put a few million dollars more profit in pockets already bulging at the expense of the farmer.

9. Contention that fortified oleo is just as good as butter.

Fraudulent propaganda. There is no scientific evidence that synthetic vitamins can replace natural vitamins.

There is evidence that butter contains certain fatty acids essential to growth and not found in vegetable fats. Therefore, replacing butter in the child's diet with an imitation is dangerous to the child's health.

The dairy industry has not objected to the addition of vitamins to oleo; it has objected, however, to the unfounded claim that such fortification makes oleo equal to butter.

10. Contention that unless oleo is sold as imitation butter, it will be difficult to sell it at all.

Correct. Likewise Hitler can sell himself only as a benevolent fuehrer and not as an egotistical despot.

Anything parading under false colors is dangerous to public welfare.

RALPH E. AMMON,
Director, Wisconsin State Department of Agriculture.

The Small Businessman

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

ADDRESS OF HON. JOHN E. FOGARTY, OF RHODE ISLAND

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me at the semiannual convention of Rhode Island State branch of American Federation of Labor, Pawtucket, R. I., on Saturday, October 4, 1941:

A major problem facing the country—one which cannot be talked down or sidetracked—but which must be taken care of now—immediately—is the problem of protecting the small businessman from complete destruction.

Raising this question is not witch chasing or crying wolf. It is a present threat to the future welfare of the Nation.

I get letters and telegrams day in and day out—I have men at my office constantly raising the same problem—their story is far more pathetic even than the plea of the mothers who fear their sons will be sent abroad to war.

The small businessman, because of priorities in necessary products, and the red tape which surrounds the administration of those priorities, finds himself at the end of his rope. The business which he has spent the best part of his life building up and which employs the heads of families who are dependent upon his success for their livelihood, faces complete collapse because he can't get the materials to go on operating or because no effort is made to adapt his shop to defense production.

We had, just a short time ago, the report from the British Embassy, to the effect that while Britain might be using some lend-lease material for the manufacture of articles of commerce for sale in this country and the rest of this hemisphere, it was with the knowledge and consent of our country and because it was felt, as it was expressed at the time, "Britain must be kept a going concern."

A very fine sentiment and deserving, no doubt, of our good wishes. But at the same time we are constantly hammered with the story that we can't have "business as usual" and "gadgets must make way for guns."

What is it going to accomplish for us—as a people—if we are successful in making the Nation an arsenal for democracy and in doing so we keep others alive but do away with little business in America—which is responsible for the vast proportion of our economic life in times of peace.

Rhode Island has diversified industries. Almost all of them fall into the small business class. You can well realize what the result will be if the jewelry industry, in Providence, the pencil, watch case, curtain rod and other items of manufacture can no longer be turned out because the materials for producing them are not available. Unless those shops can be turned into production of defense items they will have to close. And the truth of the matter is they are closing now.

You men represent organized labor. Because of the fact that you work for a living—in this matter you represent every person who lives by the sweat of his brow. And because you do—this problem is yours just as much as it is the operators of this type of business.

You men in the building trades especially, know what is happening to your line of work—particularly in home construction—because of so-called shortage of steel. Yet the facts appear to disprove an actual shortage in this material which not only affects the building trades but many, many small factories and shops throughout the country.

The Office of Production Management has estimated that there will be a need for about 13,000,000 tons of steel in 1942—after our production has been stepped up to full capacity. Even this figure is attacked as being away too high. Under the lend-lease program there is to be shipped out of the country approximately 10,000,000 tons of steel. This brings the total necessary for defense to 23,000,000 tons—and last year, in 1940—we produced 66,932,686 tons. This year we will produce in the neighborhood of 80,000,000 tons, and in 1942 it is believed the output of steel from our mills will reach 90,000,000 tons. Taking the highest estimate made of defense needs in this commodity—there would still be about 77,000,000 tons left for civilian use and that is a good deal more steel than was consumed in the boom year of 1929. Yet, in spite of this apparent plenitude there is proclaimed a shortage, and the flow of this material into civilian channels is stopped.

The question doesn't confine itself to consideration of this fact alone. It has a much broader aspect.

We have seen the picture painted for us in the so-called oil shortage. A shortage that is alleged to exist in spite of the fact that—for one example—during the first 25 days of August 1941 there were 885,000 more barrels of oil brought into Narragansett Bay than during the same period in 1940.

That scare has forced out of work many people who depend on the oil, gas, and home-heating business for a livelihood, and there is no place to absorb that unemployment, because the prospects of more scares and more unemployment is daily growing greater.

If the oil shortage is a phoney, and it develops that the steel shortage is phoney, then how in God's name can we hope to have the faith of the people in an endeavor they are not sold on yet? We hear speeches and appeals for our participation in the present war—participation to a greater extent than the people are willing to have—and at the same time we have the specter of unemployment, bankruptcy, and privations—here amidst plenty.

The answer to our troubles isn't in the curtailment of nondefense spending alone; that is important, yes; but far more important is the job of saving the life of small business and the homes of those who depend on small business for their daily bread.

It may well be that there is a shortage in some strategic materials which are vital to the preparing of our proper defenses, but we have a right to know the facts, and we are not told those facts. We can't be expected to swallow these queer situations, such as the present priorities business, in the name of national defense, while we see huge surpluses piling up, huge surpluses which some day will be thrown in our faces and will force the closing of the industries now producing them—and while we see the continuance of the red tape which clutters up the offices of those who are charged with the administration of defense agencies.

The American people have proven their willingness to sacrifice for their country's welfare; America is worth making sacrifices for. But while we do sacrifice, we have a right to complete honesty, and we have a right to all the evidence. Our home life is disrupted by our boys going off to train for military service; our economic life is being disrupted by the constantly growing army of unemployed and the fears for the future which that army will bring with it.

Before we are asked for anything further we must provide for the future of these businessmen and their employees.

I don't attempt to argue they must continue without any inconvenience at all, but we must guarantee their existence, and if they can't exist, even under reduced operations, then all the foreign wars on earth aren't worth fighting.

The National Preparedness Program

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

ADDRESS OF HON. PHILIP A. TRAYNOR, OF DELAWARE

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of speech delivered by me, Saturday, October 4, before Delaware State Federation of Labor banquet and floor show, Wilmington, Del.:

Mr. Chairman, distinguished guests, ladies, and gentlemen, I want to thank you for inviting me here tonight. It has been a pleasure, and I appreciate the opportunity of helping you close your annual convention. From the proceedings here tonight I would say that it is a fitting climax.

The most important subject before us today is our national preparedness program.

The work that some of you men are doing today is just as important in our national-defense plan as though you were engaged in the defense of your country, particularly those of you who may be occupied directly in the production of critical war materials.

You workers of America have a big stake in the outcome of the present war. Neither business nor labor can ever do business with Hitler. Don't think that freedom of the seas is just a saying. Freedom of the seas or any other freedom means jobs and security. Free labor of America cannot remain free if our raw materials and markets are to be doled out or rationed to us by the Axis overlords.

Labor's outlook in the United States at the moment is bright. Today, for the first time in a dozen years, labor is at the top of the heap. We are in a workers' market. But it won't continue that way if Hitler wins. We all will be reduced to slavery and poverty such as we have never seen before.

Defense employment is increasing rapidly as new defense plants go into production. The aggregate is now in excess of three and one-half million workers, counting those in all stages of the plan. According to the program as now planned, defense output will call for the employment altogether of about 6,000,000 workers not later than the third quarter of next year.

Much defense employment is entirely outside the direct defense industries. Roughly, half of estimated defense employment is in basic industries providing plant, equipment, materials, and parts for defense as well as civilian products.

Latest figures show that aircraft frame, engine, and propeller plants, together with aircraft subcontractors, are already over the 400,000 mark and will probably require another 600,000 workers before the end of 1942.

Ship construction, while not a new industry, but one scheduled for the period of greatest activity in its history, ranks next after ordnance and aircraft in 1942 employment requirements. It is estimated that 625,000 workers will be employed in shipyards next September, while probably even more will be indirectly employed in the production of structural steel shapes, plates, engines, pumps, etc.

We don't want war, and I hope and pray that we will not have to enter the conflict because, as Sherman said, "war is hell." But to a certain extent some of the control of this appears to be getting out of our hands. Hitler and his ruthlessness seems to be the deciding factor. We are being forced to consider his next step whether we want to or not. He and his hordes must be defeated at any cost, if we are to remain a free and democratic Nation. That is why we must help the other countries who are fighting him unless we want to be surrounded by hostile powers. Taking into consideration the turn of events, it would not have been logical to follow previous commitments. Our policy has had to change from day to day to keep pace with the changes being forced on us.

We must share the tax burden unless we want to pay tribute under the Nazi yoke, which I am sure you don't want to do.

While Russia is not to be condoned for her past exploits, I do feel that she deserves consideration in her present struggle against Germany, to the extent that she is fighting Hitler, and I am for anybody or anything which may help to bring about his downfall. I agree that there is little to choose between Germany and Russia, but I feel that Russia is the lesser of two evils. However, I do not intend to imply or suggest that we should accept the "isms" or ideals of the nations fighting Hitler.

The situation is most unpleasant, but we all must subordinate our personal interests to that of our country during our national emergency if we are to survive.

We must realize the heavy responsibility which liberty imposes on those who enjoy it. We must stand for stable government, for the intelligent and unselfish application of those ideas and practices which make for peace, stability, and social advancement. We must have an equally strong determination to avoid the pursuit of onesided, artificial, self-defeating ideas and practices in national and international affairs. This requires sacrifice. Today we are living through a dark period. It is in times like this that each of us needs desperately to hold fast to the faith that is in us—a faith in the destiny of free men and the supreme worth of Christian morality. With that faith we shall gladly meet the sacrifices demanded of us by the harshness of these days. With that faith we cannot lose hope that the lesson which so many of us have learned will be learned by all.

Resolution of Farmers' Union of Jackson County, Okla.

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

RESOLUTION ADOPTED BY JACKSON COUNTY (OKLA.) FARMERS' UNION, SEPTEMBER 26, 1941

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution 1

Whereas the war in Europe has been in progress for 2 years and has evolved itself into two major groups upon the one hand, those who favor Hitler and fascism domination and controlling the economic and political life of all Europe in the very near future and ultimately in the entire world.

And whereas Hitler's policy had been to take over one nation at a time, assuring the rest of the world he has no further demand to make on any other nation, when in fact just as soon as he got control of one nation he jumped on the next one destroying every vestige of democratic government and setting a complete dictatorship with instructions to court martial and shoot all those who dare oppose leadership. No farm or labor organization or any other organization is allowed to exist that is not 100 percent for Hitler and fascism. This has happened to 10 or 12 little nations of Europe who had tried to stay neutral but were overrun just as soon as Hitler thought best.

While the Farmers' Union is opposed to war, opposed to the cause of war of aggression, we regard Hitler and his cohorts as being solely responsible for the destruction of all the nations he has attacked, killing millions of helpless people, we wholeheartedly join those who pledge themselves to help defeat Hitler and his cold-blooded helpers.

Since England and Russia have plenty of manpower their greatest need is war material and food. We heartily endorse every effort being made to supply the need of those who are doing the fighting. But we are opposed to sending American soldiers to fight on foreign soil.

A. E. BAGWELL,
Blair, Okla., Chairman.
W. W. SNIDER,
Blair, Okla., Secretary.
W. R. HARPER,
Eldorado, Okla.
J. K. SORRELL,
Blair, Okla.
P. H. BESSIRE,
Headrick, Okla.

Honore Provencal

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

ARTICLE FROM THE WOONSOCKET (R. I.) CALL

Mr. SPRINGER. Mr. Speaker, the Woonsocket Call on Wednesday, the 1st day of October 1941, contains a very fine and highly deserving tribute paid to Honore J. Provencal, of Rhode Island, who is a veteran of the last World War and one of the pillars of the American Legion in his home community, for the outstanding courtesies shown to the people generally who visit Washington and the Nation's Capital, and especially to his own people from the State of Rhode Island. Mr. Provencal is highly deserving of this tribute.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and to include therein the article contained in the Woonsocket Call, of date Wednesday, October 1, 1941, in which a fine tribute is paid to that fine citizen of Rhode Island, Honore J. Provencal.

[From the Woonsocket (R. I.) Call of October 1, 1941]

HONORE PROVENCAL IS PAID TRIBUTE—GOVERNMENT WORKER LAUDED IN POEM FROM CLERK IN CONGRESS

Praise for the efficient manner in which Honore J. Provencal, a former resident of this city, performs his duties at the Nation's Capital, and for the courtesy he shows visitors from Woonsocket and other Rhode Island communities, is contained in a letter from H. V. Hesselman, clerk of the Committee on Enrolled Bills of the House of Representatives.

Hesselman prepared an acrostic adding to the words of praise contained in his formal letter, and asked that it be published. The communication from the House of Representatives clerk says Provencal "is a frequent visitor in our office and his duties are always extremely pleasant."

The acrostic follows:

HONORE J. PROVENCAL

H-ere's a salute to a Franco-American so true,
O-ne of the Capitol's most useful crew;
N-o one who knows him has aught bad to say
O-f New England's son who's always so gay.
R-hode Island is proud to laud this real man
E-ver so loyal to "Little Rhody's" clan.

J-ust, fair, and equal to all that he meets.

P-leasant amid success or defeats,
R-evels in spreading the sunshine to all.
O-ver the land—kind to great men or small,
V-ictors or losers—what's in a name?
E-ven the humblest receives his acclaim,
N-ever a snub in the life he has planned.
C-hildren or adults—all get a glad hand,
A-nd none justly criticizes—not e'en Walter Winchell—
L-oyal and faithful Honore J. Provencal.

America's Answer

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

EDITORIAL FROM THE BOSSIER BANNER, BOSSIER PARISH, LA.

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bossier Banner, official journal for Bossier Parish, La.:

[From the Bossier Banner, Bossier Parish, La.]

AMERICA'S ANSWER

Every free-born, liberty-loving American should find pride in the announcement that a fleet of 338 warships, large and small—part of a $10,000,000,000 drive for a 2-ocean Navy, which is growing mightily daily—has taken up its fighting assignment of maintaining the "freedom of the seas" as defined by the President.

Back of this fleet—already rated by United States naval men as the world's strongest single sea force—were 400,000 men in shipyards working the clock around on all 3 coasts.

Keels of 436 vessels have been laid this year and 213 new vessels have joined the Navy. Since January 1 more than $85,000,000 has been spent in expanding shipyards and the number of ways more than 300 feet in length have been increased from 104 to 127.

In the fleet today are 15 battleships, 6 aircraft carriers, 37 cruisers, 168 destroyers, and 112 submarines. Building are 17 battleships, 12 aircraft carriers, 54 cruisers, 196 destroyers, and 74 submarines.

Two new 35,000-ton battleships, the *North Carolina* and the *Washington*, each mounting nine 16-inch guns in triple turrets, will join the fleet. Four more of the same class are due for completion during 1942 and keels have been laid for four 45,000-tonners. Seven more of 50,000 to 60,000 tons have been authorized.

The total number of naval planes on hand early this year was under 3,000. The immediate goal is something close to 10,000, and the ultimate objective 15,000.

American naval building policy in the past has greatly stressed armor, guns, and cruising range, rather than speed, but the newer ships are believed among the fastest on the seas.

On June 30, 1939, there were only 110,000 men in the United States Navy. This figure has been doubled, and a strength of close to 300,000 is foreseen for mid-1942. It will take a half-million seamen to man the full two-ocean navy.

The Navy's pilot-training program calls for about 6,000 pilots by the end of this year, and eventually about 17,000.

All this (and very much more) is but a gesture of an aroused people as given expression through Mr. Roosevelt and Congress. It means that free America will remain free and that the people of this great Nation have recognized that their inalienable rights are presently being threatened. That's all; but, as once before, it will prove enough to determine the pivotal point of putting down despotism.

National Defense, Aid to Britain, or Money for the 1942 and 1944 Campaigns?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. HOFFMAN. Mr. Speaker, under the guise of national defense, aid to Britain, this administration is duplicating the policy which it pursued prior to the 1940 elections and when, back in the 1930's, under the plea of aid to the unemployed, it secured appropriations amounting to billions of dollars, not a little of which was used for the political advancement of the new dealers.

Now, under another name, that of national defense, aid to Britain, another drive for the perpetuation of themselves in power is being carried on by the new dealers.

Will Congress assert itself and save the taxpayers of the Nation from the burden of supplying the New Deal with the funds to carry on its 1942 and 1944 campaigns?

The following editorial from the Chicago Tribune of Monday, October 6, discloses facts which Congress should consider:

[From the Chicago Tribune of October 6, 1941]

WILL CONGRESS ASSERT ITSELF?

The last war, in which we had an A. E. F., cost us $22,000,000,000. The twenty-two billions did not all go for the A. E. F., but also paid for training of troops before they went overseas and for training troops who didn't go over. The twenty-two billions also took care of the equipment which was made, but which was either unusable or not made in time to be employed. The twenty-two billions included the vast sums taken by unscrupulous men out of dubious contracts, harbor appropriations, camp locations, and the many other spoils of war and politics. The twenty-two billions represented the aggregate direct cost of our participation in the World War.

The twenty-two billions which was spent directly on the World War was a sum so vast that it was said a few years ago that "such outpouring of money has never been remotely approached or dreamed of in any country in any period of history."

Now prepare for a surprise. The Roosevelt war-spending program already amounts to $65,000,000,000, including lend-lease. This is roughly three times as much as the whole cost of the last war. While we are still at peace, commitments have been made for an aggregate three times as much as the whole cost of the last war.

The present orgy of spending makes pikers out of the wasters of the World War era. What in heaven's name is the Roosevelt administration up to with its program of $65,000,000,000?

Mr. Chesly Manly, of the Tribune's Washington bureau, analyzed the available figures on costs of equipment for an army of 10,000,000 as a possible clew to the present objective. Mr. Manly found that $20,323,000,000 would be available out of the sixty-five billions for ordnance and other fighting equipment. He found on the basis of War Department estimates that 400 divisions—100 of them motorized—could be equipped for $4,550,000,000. He found that 100 completely equipped armored divisions could be provided for $3,434,000,000. Thus, an army of about seven and one-half million men made up of 400 infantry divisions, 100 of them motorized and 100 armored divisions, would cost $7,984,000,000. This would leave over $12,000,000,000 for reserve equipment and for the cost of equipping 2,000,000 men in an air force.

And the twenty billion to provide for an army of 10,000,000 men would still leave nearly forty-five billions of the Roosevelt program untouched.

Appropriations are made on this fantastic scale with little said about where the money is coming from. As the bills start coming in, the Secretary of the Treasury thinks about that. He first improvised a savings-bond scheme. That hasn't worked. Next, he asked for outrageous taxes on the income of persons and companies which increased some levies by as much as 300 percent besides imposts on consumers goods. Within recent weeks he has been crying out for the socialization of corporate incomes, taxes on workmen under the guise of social security, and finally what he termed "all-out taxation."

The billions were all voted by Congress. Without authorization of the legislative branch of the Government, the Roosevelt administration couldn't spend any money at all. The wanton waste of money has all been provided for by laws approved by both Houses of Congress. It is true that it takes a man of character to oppose a regime when anyone who refuses to be a "yes" man is likely to have his patriotism attacked.

But the legislative branch of the Government has a function to perform, and surely there are some men at the Capitol strong enough to stand up for the right. The President's majority is actually the smallest of his administration. Now that Morgenthau's speeches have shown what the consequences of the reckless waste of funds will be, Congress should be able to pull itself together and do its duty.

The Neutrality Act

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

RADIO ADDRESS OF HON. FRANK B. KEEFE, OF WISCONSIN

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio speech of Hon. FRANK B. KEEFE, of Wisconsin, Mutual network, Friday, October 3:

My fellow Americans, the recent sinking of American-owned merchant ships is constantly referred to by some people as a compelling cause for our active participation in the present European war.

It is unfortunate that newspaper headlines do not always convey the facts. In a period, however, when truth and facts, instead of hysteria and emotion, should control our thinking, it is apparent that some citizens, afraid or unwilling to face the facts, are by their intemperate and intolerant reasoning and utterances, confusing rather than clarifying the issue.

Let us calmly and dispassionately review the facts. On August 31, 1935, the President signed a joint resolution adopted by the Congress providing for the prohibition of the export of arms, ammunition, and implements of war to nations at war. It prohibited the transportation of arms, ammunition, and implements of war by vessels of the United States for the use of nations at war. The world was at peace when it was passed by the Congress and signed by the President. Its passage was the result of the exercise of calm, temperate judgment by the Congress, unaffected by the hysteria and emotionalism generated by war. It had the full approval of the President and was hailed by him as one of the great constructive pieces of legislation in the cause of keeping this Nation at peace.

On May 1, 1937, the President approved a joint resolution amending the Neutrality Act of 1935. This resolution again expressed the will of the Congress and the President and had the overwhelming support of the American people. The resolution of 1937 strengthened the existing neutrality legislation and again prohibited the exports of arms, ammunition, and implements of war to nations found by the President to be at war. It made it unlawful for citizens of the United States to travel on any vessel of a nation at war.

Two successive Congresses thus expressed their determination to prevent the sinking of American ships with loss of American lives by prohibiting them from carrying munitions to nations at war. Twice the President urged the adoption of such legislation and twice he gave it his unqualified approval. This legislation gave notice to the world that the United States intended to maintain its neutrality and stay out of foreign wars.

The American people thought calmly then. They fully realized that as citizens we are constantly compelled to accept restrictions on our personal rights in order that safety and good order might prevail. They knew, for example, that although the Constitution guaranteed the right of free speech, such right did not include the right to yell "Fire" in a crowded theater. They knew that it did not include the right to slander and provoke riots and disorder. They knew and know now that our rights are restricted in many ways in order that we may maintain a well-ordered society. They knew and know now that in case of fire, good citizens do not insist upon driving cars across the fire hose and entering the scene of danger. The American people, still smarting and suffering from the bitter results of the last war, were only too willing to accept some restrictions on their technical, legal rights in order to preserve our neutrality and avoid involvement in foreign war.

It was in this spirit that the Neutrality Acts of 1935 and 1937 were written. From the very nature of things, the neutrality legislation would not be called into action unless a war broke out between foreign states. Congress and the President simply said to our people: "If and when war does break out between other nations, we shall impose restrictions upon American citizens in order that we shall not become involved."

The President referred to the neutrality legislation when he spoke at Chautauqua, N. Y., on August 14, 1936. Listen carefully to his words:

"Nevertheless, if war should break out again in another continent, let us not blink the fact that we would find in this country thousands of Americans who, seeking immediate riches—fools' gold—would attempt to break down or evade our neutrality. It would be hard to resist that clamor; it would be hard for many Americans, I fear, to look beyond—to realize the inevitable penalties, the inevitable day of reckoning that comes from a false prosperity. To resist the clamor of that greed, if war should come, would require the unswerving support of all Americans who love peace."

War did break out in Europe. Passions began to flame. Cold logic and solid reason gave way to emotionalism. Hysteria fanned by prejudice and propaganda demanded the immediate repeal of the arms embargo. It was repealed by the Congress after a bitter fight, and the President approved its action on November 4, 1939.

Important changes were thus written into the neutrality law under the stress and strain of existing war conditions. In the Neutrality Act of 1939 it was provided that whenever the President finds that a state of war exists between foreign states, it shall be unlawful for any American vessel to carry any passengers or any article or material to any state named in the Presidential proclamation. The legislation changed the law which prohibited the sale of arms and munitions to nations at war and adopted the so-called cash-and-carry provisions, permitting states at war to purchase arms and munitions and any other materials provided that title was transferred before leaving our shores, that cash in advance was paid therefor, and that the materials were taken from our shores in foreign vessels. The President was empowered to define combat areas and to prohibit American ships and American citizens from entering such areas.

Thus again, as late as 1939, with the European war in full progress, the Congress and the President approved the principle of denying the right of American ships to enter combat zones and the right to carry arms and munitions or other war materials to nations at war.

The President sent a message to the Congress on September 21, 1939, urging repeal of the arms embargo. He said, among other things, and I quote:

"By the repeal of the embargo the United States will more probably remain at peace than if the law remains as it stands today. I say this because with the repeal of the embargo this Government clearly and definitely will insist that American citizens and American ships keep away from the immediate perils of the actual zone of conflict. This means less likelihood of incidents and controversies which tend to draw us into conflict as they did in the last World War. There lies the road to peace."

That was the solemn pledge of the President. Let us now examine the subsequent facts. Pursuant to the existing neutrality law, the President proclaimed and defined combat areas and thus prohibited American ships from sailing into those zones. What happened? Ship after ship was transferred with the consent of the United States Maritime Commission to registry under the laws of the little Republic of Panama. By this simple device these ships took down the stars and stripes and unfurled from their mastheads the flag of the Republic of Panama. By this simple device these ships surrendered their status as American vessels. The private corporations operating them, lured by the prospects of great profits to be achieved in the war business, deliberately chose to become subject to the laws of the Republic of Panama. They deliberately succeeded by this subterfuge in evading our neutrality laws. They could now carry war materials directly into zones prohibited to American-flag ships. This deceit and trickery was accomplished with the consent of our Government.

I say to you they are not American ships and they are not entitled to the protection of the United States Government. Their owners or operators elected voluntarily to surrender that protection when they became registered under the flag of the Republic of Panama.

Thus we find that ships owned or operated by private corporations have been transferred to Panamanian registry in order that they might engage in the profitable war trade, the very thing which our neutrality law sought to prevent. It must seem clear to the most casual-minded citizen of the United States that such profits are the fools' gold that the President so bitterly denounced in his Chautauqua address on August 14, 1936, and that such ship operators are the type who now clamor for repeal of our neutrality laws in order that they might further enrich themselves by engaging in the hazardous business of transporting arms and munitions to nations at war.

I say to you, my fellow Americans, that when such ships sail into combat areas where American-flag ships are prohibited from entering, they take their own risk and their sinking is no cause to sacrifice our blood and treasure on the altar of war.

Three of the five ships sunk, namely, the freighters *Montana*, *Sessa*, and *Pink Star*, fall in this class.

The other two ships sunk were the *Robin Moor* and the *Steel Seafarer*. These ships sailed under the American flag. The latter was sunk in the Red Sea 12,000 miles from our shores. It was sailing in an area first designated by the President as a combat zone. It was loaded with war munitions destined for delivery to a nation at war. Under all international law it was subject to capture or sinking. No American life was lost.

The *Robin Moor* was sunk in the South Atlantic. No American life was lost. It was carrying contraband to the Union of South Africa, a nation at war. Again it is conceded that in such circumstances, under international law it sailed at its own risk.

Let me call your attention, however, to the fact that the plain mandate of our neutrality law was definitely violated when these ships were permitted by our Government to sail from our ports loaded with contraband material. Remember, my fellow citizens, that our law strictly prohibits an American-flag ship from carrying war materials to a nation at war.

Are you willing to go to war because of the sinking of these ships? I am confident your answer will be an emphatic "No." I know you feel now as the President felt in 1936 when in discussing this subject, he said:

"If we face the choice of profits or peace, the Nation will answer—must answer—'We choose peace'."

Small Business

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

EDITORIAL FROM THE NATIONAL INDEPENDENT, NEW YORK, N. Y.

Mr. PATMAN. Mr. Speaker, I desire to insert in the CONGRESSIONAL RECORD at this time an interesting editorial, which appeared in the September, 1941, issue of the National Independent, New York City, N. Y., George J. Burger, publisher, entitled "Small Business." It is as follows:

[From the National Independent, New York, N. Y., of September 1941]

SMALL BUSINESS

It is becoming increasingly evident that our time-worn and battle-scarred system of small business is today in more dire peril than at any former period of its history. For if the malign forces now working within our Government and in our business structure, too, are not curbed, we are in grave danger of shortly becoming a Nation of a relatively few gigantic corporations, a Nation in which the right of every individual to embark alone upon the seas of economic endeavor will be "deader" than the proverbial "dodo."

This is a fact. It is not an idle chimera. Nor is it unduly alarmist. If you'd rather not take our word for it, don't.

In June it was Thurman Arnold who warned that big business, labor, and the present method of handling priorities, were crushing little business. Again in June, it was P. R. Nehemkis, Jr., of the O. P. M., who predicted that before the end of summer one-third of American industry will be obliged either to change over to munitions making or stop operating entirely. (In this connection it is significant to note that small business, although it has the ability to handle war orders efficiently, is receiving almost none of this business.)

In July it was a prominent member of O. P. M. who said that as many as 5,000 small firms face shut-downs, some ruination. Again in July it was Hugh Johnson, well-known columnist, friend, coworker, and confidant of B. M. Baruch, Chairman of our War Industries Board of World War I, who wrote "this mighty production effort vastly increases monopolistic tendencies, and, if something is not done to control it, will do more to wipe out small individual enterprise and the continuation of competition than anything that has ever happened in this country."

Reason for this state of affairs is not too difficult to find. In the first place there are at present either actual or pending shortages in certain critical raw materials which are necessary components of needed war equipment. Mounting defense orders, for our-

selves, Britain, China, Soviet Russia, and all other nations fighting for the preservation of democracy, are devouring ever greater amounts of these basic materials. Consequently a curtailment in the production of goods, manufactured from these materials, for purposes of civilian consumption has been ordered.

Manufacturers of these goods have, therefore, been forced to forego a great part of the profit necessary to their continuance in existence. To compensate for this loss a new field of endeavor has been opened—the production of goods for war consumption. Profits can be, and are being, had from these operations.

Unfortunately however, to date only a comparative few of these concerns—in almost every case the largest—have received the bulk of this new business. Our smaller firms have received little or none of it. They are being forced to go along as best they can on their reduced production.

Then, too, taxes are steadily spiraling upward, the cost of labor is increasing, and materials for manufacture stand at levels substantially above those of a year ago. Big business, because of its connections, its preferential war orders, and its moneyed backing, is in a good position to withstand the impact of those new conditions. But small business, having been left "in the cold," is definitely, as we have said, in a precarious plight.

Fortunately, there is in our Government, as we have noted elsewhere in this paper, increasing evidence of a new-born interest in the cause of small business. This is even more healthy and heartening when it is recognized that this interest is of a nonpartisan nature. Republicans and Democrats alike have their shoulders to the wheel. That is the way it is. That is the way it should be.

Are We Children?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

Mr. HOFFMAN. Mr. Speaker, are we children, so immature, so lacking in intelligence and courage, that we cannot be told the facts which vitally affect our individual and our national existence?

RELIGIOUS FREEDOM

The President told us that the "four freedoms" must be carried to the uttermost ends of the earth, by force if necessary. Then he said we must become the ally of Russia, which, as everyone knows, denies freedom of worship and teaches that religion is a fraud; that there is no God.

To soften the people's animosity toward such an alliance, the President last week said that Russia did have freedom of religion. To that statement Bishop Raymond J. Wade, head of the Methodist Detroit area, replied that the President's observations on Russia's religious policies were obviously untrue and utterly misleading.

Yesterday, the President, forced to admit the inaccuracy of his statement that Russia did have freedom of worship, issued another statement, which a Washington paper headlined as follows: "President hopes Soviet will grant religious rights."

Why should the President attempt to deceive us? Most school children know Russia's record of persecution of priests and ministers; of the destruction of churches; of the denial of opportunity to worship.

ON OUR WAY

Returning from a trip to Europe, a writer for the Detroit Free Press, which supports the President's foreign policy, tells us that we must send more than 2,000,000 fighting men across the seas, if we are to accomplish the President's purpose of invading Germany, destroying Hitler.

If that is what the people want; if they are willing to pay the price and offer to the war gods, to the advocates of international trade, a sacrifice of another 2,000,000 or more American men, then so be it. But, until Congress declares war, I shall do everything I can to prevent the sending of another A. E. F. to Europe, while at the same time doing everything possible to aid this country in its national-defense program.

That the President is determined to send an A. E. F. to Europe is shown by his statement on page 45 of Collier's of October 4, where he said that we had pledged our manpower—note that, manpower—to aid Britain, and by his further statement in Collier's of October 11 that:

> It has now become apparent that the very physical security of the United States is at stake. * * * Its physical safety and independence are being threatened.

Obviously, an incorrect statement.

Not a single military expert here or elsewhere believes that statement. Every one has said in no unmistakable terms that Hitler could not successfully invade the United States.

POLITICS INTERFERING WITH NATIONAL DEFENSE

Time and again we have been told that we should forget politics in considering national defense. We should. Since the question of national defense arose, I have had no thought in mind other than what was best for my country. Unfortunately, the administration has persistently played politics with our national-defense program.

The Currier Lumber Co., of Detroit, an open-shop company, was, by governmental agencies, forced into a union. The company told its men to pick a union, join, and it would sign a contract. The men joined the C. I. O. The company signed a written contract. Then the company bid on the construction of homes for defense workers. The company's bid was $979,000, which was $431,000 less than the next lowest bid. The bid was $1,440 per house less than the next lowest bid. The workingmen who buy these houses would have, had Currier's bid been accepted, paid $10 less per month over a period of 12 years for each of these homes.

Although the acceptance of Currier's bid would have meant a saving to the Government of almost half a million dollars and a saving of $1,440 to each individual workingman who purchased a home—and there were several hundred of them—the O. P. M. refused Currier's bid because his workmen did not belong to the A. F. of L.

Can you tie that? All those workingmen denied jobs because they belong to the C. I. O. instead of to the A. F. of L.; the Government cheated out of $431,000 because the workers belong to the C. I. O. instead of the A. F. of L.; the defense workers themselves required to pay $1,440 more for each home because they were members of the C. I. O. instead of the A. F. of L.

It is time the Aegean stables in Washington were cleaned of the Communists, of the politicians, of new dealers, which are infesting them.

Problems of Small Businessmen

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

LETTER FROM A. P. NONWEILER, OSHKOSH, WIS.

Mr. KEEFE. Mr. Speaker, a short time ago we called attention to the lamentable situation that is developing in this country with respect to the inability of small manufacturers to remain in business under the present system of priorities and allocation of war business.

We incorporated in those remarks a letter received from Mr. A. P. Nonweiler, of Oshkosh, Wis., a small paint manufacturer, dealing with this subject. In his letter, Mr. Nonweiler very clearly and succinctly pointed out the problem and suggested a remedy. Since that time, considerable comment has been received relative to the suggestions therein contained.

Because we deem the suggestion of Mr. Nonweiler worthy of continued consideration, we are pleased to incorporate in these remarks a subsequent letter under date of September 30, 1941. The letter follows:

SEPTEMBER 30, 1941.

Unfortunately I had to be in Minneapolis during your last visit. I wanted to thank you personally for the prompt efforts you made in behalf of small businessmen. That was a fine thing, Frank, and I want to tell you it has earned the sincere appreciation of all of us. It is indeed heartening to know that it is still possible in these turbulent times to be heard. You certainly function as a representative of your people; and, best of all, you don't lose any time doing it.

As I predicted, already more and more businessmen are becoming conscious of their predicament and are beginning to think. That's a good sign; pretty soon they'll form a group, and with good leadership something will be done. I've talked over my idea with some really intelligent people, and they agree with me on the following points:

The crisis is here now.

The big fellows are getting practically all the business.

The small businessman must have some Government business at once or he'll have to close down.

The Government must fix prices on Government specification materials, and those prices must be figured on a cost basis of a small manufacturer who buys less-than-carload lots. Those prices should be f. o. b. point of production.

I do not believe it is too fantastic to assume that the Government would like all small businessmen to get a just share of defense business. I think we should adopt that premise in our reasoning. It has been argued that if the Government fixed the price of, say, a certain grade of paint, what would be the basis of awarding the business if the price were the same? There are several answers to that, but above all we must keep in mind the major thought, and that is to distribute it on a more equal basis. Truly that is really more important to everyone concerned than the Government giving it all to some low bidder who might even take a loss.

By establishing a price based on a small manufacturers' cost, a fair price is made certain. That is point No. 1. In making the price f. o. b., point of production, it will automatically distribute the business to many localities because of freight-rate advantage. Furthermore, it will eliminate the necessity of burdening transportation by, for example, filling up a freight car with paint from Cleveland, Wilmington, New York, and shipping it to Oshkosh or Green Bay or Madison, when only a truck and a short haul from Oshkosh is required. And by the same token it will eliminate the economic waste of hauling paint from Oshkosh to Chicago when there is a manufacturer in Chicago who can truck it where it is needed. That is point No. 2.

In making the material nearer where it is to be used it will speed up delivery; in distributing the business to more communities it will keep small business intact; and that point alone is worth any means whatever to justify it. It will further serve to enroll thousands of plants in the defense effort, which will result in enormous productive capacity, less liable to disruption or dislocation by strikes, sabotage, transportation shortages, etc. That is point No. 3.

It will still preserve the spirit of free enterprise because there will still be competition, but that competition will be healthy, not vicious or ruinous or calculated to destroy small business. Where, for example, a company is making a product for the Army or Navy which requires a Government specification paint, they should be furnished with a list of approved manufacturers in their district, the price stipulated, and the choice given them to favor any 1 of 5 or 20 with their business.

The big fellow will still get his share, but not more than his share, and prices being figured on the small manufacturer's cost, he will actually make more profit, but that again will be leveled with the application of the tax program.

This plan will work, Frank.

Important as this is, there is still one step that has to be taken first. And it must be taken immediately, regardless of any political anxiety. It is this:

A general decree must be issued immediately to freeze all prices on today's level; that includes all commodities, labor, rents, rates on interest, discount, everything, with this proviso: In each industry, such as steel, automobiles, paint, foods, dairy, drugs, etc., a board to be set up to hear complaints, investigate, and, if just cause exists, to refer to a general board of parity set up by the Government to make adjustments in the light of parity.

There is no use to dwell any longer on what possible horror labor or farmers may express at this idea. It is better to soberly contemplate the terrific maladjustment that will certainly occur if this is not done at once. No sensible person or group can argue against the immediate stability this will provide against the wild uncertainty that will surely follow if this is not done.

I say today's prices should be frozen rather than any other period because as yet the situation is still somewhat in hand, and within reason. If we go back to 1939 or 1940, there are sure to occur losses on inventory which would cause untold hardships.

As a basis of price fixing, take the cost of manufacture of small business and contemplate a small profit of 6 to 10 percent on invested capital, all business with $100,000 or more invested allow 6 percent, and all less than $100,000 allow up to 10 percent, graduated so anyone with $25,000 or less invested can make 10 percent.

If a price-fixing decree of a general nature such as I have outlined above is made immediately, stability will prevail at once, people will realize immediately something has been done, hysteria will vanish, confidence will return, small business will be kept intact, the farmer and laborer will feel secure, and big business will not suffer.

There is no good argument against this that will provide in its place a better solution immediately. Nor will it be any fairer to all concerned.

Talk this over with your colleagues, Frank, and let me know what you think of it. Best regards.

Yours very sincerely,

A. P. NONWEILER CO.
A. P. NONWEILER,
President.

America for Americans

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

PETITION OF THE CONSTITUTIONAL DEFENSE LEAGUE OF WOMEN

Mr. HOFFMAN. Mr. Speaker, under permission granted, I insert herewith a copy of the petition being circulated by the Constitutional Defense League of Women:

Petition to the Congress of the United States:

Whereas our Government at Washington is patriotically arming the Nation to repel any attack or invasion by the armed forces of any armed power, it is no less the patriotic duty of the Government to deliver America from the invasion of communism, nazi-ism, or fascism—an invasion which violates our national sovereignty, which insults our citizenship, and which seeks to destroy the Government itself;

Whereas the Communist party of the United States of America, affiliate of the Third Internationale, while pretending that "communism is twentieth-century Americanism," is in reality organized for and dedicated to the overthrow by violence or otherwise of the American system of government;

Whereas investigators have already found substantial evidence that Communists are established in trade unions all over the Nation, voting solidly with Nazis and Fascists on strike questions, forming a powerful sabotage and spy ring ready to act on short notice, and who at this moment are deliberately fomenting discord in the ranks of labor as a means of impeding American rearmament and further undermining the national-defense effort of this country, on which we are spending millions of dollars: Now, therefore, be it

Resolved, That we respectfully request the Congress of the United States to take such measures and enact such laws as will cover the following resolutions:

We, the undersigned, heartily approve the resolutions herein adopted. They are as follows:

Resolved, That our national-defense program is paramount to all other issues; and therefore be it

Resolved, That all Communists be expelled from the C. I. O. (reported by the Dies committee to number approximately 40,000);

Resolved, That all labor unions with Communist members or officers be expelled from bargaining rights in defense-industry strikes;

Resolved, Expulsion of every Communist, Nazi, or Fascist, and every person who has been active in foreign-controlled political organizations from defense industries;

Resolved, Deportation at the earliest possible moment of aliens, including anyone who is a member of a foreign-controlled political organization;

Resolved, To stop immigration from every country which refuses to take back citizens ordered deported from the United States;

Resolved, Revocation of citizenship of every naturalized citizen who takes part in activities of a foreign controlled political organization.

Name Address

So that all petitions may be presented to Congress at one time in a mighty demonstration of patriotic sentiment, please mail all signed petitions to

Not that I endorse it or decline to endorse it but that others may have the benefit of it, I quote it here in full:

[From the Tulsa (Okla.) Tribune]

A decisive step now to insure the speedy construction and use of additional dams on the Grand and White Rivers for national-defense power will do more for a well-balanced future of industry and agriculture in eastern Oklahoma and western Arkansas than a decade of normal developments. The current showing of private utilities that there is a surplus of 58,000 kilowatts in the State is overwhelmed by the testimony of William S.

Knudsen before the Rivers and Harbors Committee of the House of Representatives that "I don't believe we will ever have power enough in the United States," and that his 30-year experience as an industrialist convinces him water power is the cheapest. Knudsen knows that "only the savage neglects to cultivate his crops when his stomach is full," and favors the development of the water power in the Arkansas Valley, which means in Oklahoma and Arkansas, for there are no power rivers above the Grand. He knows the national defense needs, and we should follow his counsel and not those who have personal aims to advance.

In the interest of the preparedness program Congressman CLYDE ELLIS, of Arkansas, should consent to changes in his bill proposing the creation of an Arkansas Valley Authority to federalize all the water in this great region. That is a highly controversial subject in western Oklahoma, Kansas, and Colorado, where water is a fixed form of private property for irrigation, and it will take more time than is available now to work out a social and economic program like this in fairness to each State and its people.

It will be better to write a new bill setting up an authority restricted to distributing the power from the new dams. In fact, this is necessary, for Norfork and Denison Dams will soon be producing energy and no method of distribution has been set up. The power that will come from the Markhams Ferry, Fort Gibson, Tenkiller, Bull Shoals, and Table Rock projects when they are built, and, if possible, the power from the State-owned Pensacola Dam should be put into this pool and then national-defense industries should be built here to use it. The lesson of the Pacific Northwest and T. V. A. is that where great power pools are created, industry comes in and remakes the entire region.

Pronouncing the Pacific Northwest a second Ruhr in America, the magazine Business Week, in its issue of August 2, describes in detail how industry has moved to that region, where Bonneville and Grand Coulee dams are being finished. Eleven great metal-reducing and other plants have already gone there. They are to be followed by many fabricating and other smaller plants. Only the creation of a vast surplus of cheap power has made this western development possible, and if you can believe Mr. Knudsen, these expansions have only started in the United States.

The trend to power pools is clearly illustrated by the announcement last week that T. V. A. is to operate the five-dam hydroelectric system of the Aluminum Co. of America on the Little Tennessee River. T. V. A. will not assume ownership but will direct and control their operations and integrate them within its own system of dams "in such a way as to obtain maximum public usefulness." This was not a forced decision but was arrived at by company and T. V. A. studies establishing "that the maximum production of power and maximum flood-control benefits could not be secured by independent operation of the two systems."

That ought to prove that Pensacola and Markhams Ferry and Fort Gibson cannot be operated efficiently independently. It is no secret that when the State instead of the Army engineers built Pensacola, the heart was cut out of flood control. It must be put back in the larger project but it cannot be restored without unified control.

Undoubtedly Oklahoma will stand for Congressman ELLIS' bill if he will modify it. Senator THOMAS in Tulsa Saturday expressed pained surprise that a few Oklahomans were opposing the new dams. Senator LEE and Congressman DISNEY write they are watching the operations of G. R. D. A. closely and are impressed with the arguments for efficient central control of such resources. Congressman NICHOLS frankly favors the pooled control. Such a conservative organization as the Tulsa Chamber of Commerce, through its general manager, Russell S. Rhodes, hails the announcement that Markhams Ferry and Fort Gibson will be built in an editorial in the current issue of the Tulsa Spirit. "We have been contending for years that the future of eastern Oklahoma depends upon an abundance of cheap power, whether public or private, for the development of our natural resources," Rhodes writes. "The Cardox Corporation's plant for processing potassium perchlorate, a private enterprise, was located at Claremore primarily because cheap (G. R. D. A.) power was available. One industry often brings another or several complementary enterprises. The long-term outlook for industrializing our part of the State is definitely promising."

But building dams with public money and operating them in the public interest are sometimes two separate and distinct things. At this juncture Congressman ELLIS probably has it within his power to make the changes that will make the plan work. He is wise and he is sincere. We hope he will agree to the revision.

Price Control of Agricultural Products

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

RESOLUTION ADOPTED BY LOUISIANA FARM COUNCIL

Mr. SANDERS. Mr. Speaker, the question of control of price by artificial means is one that is now giving our people a great deal of concern. At a meeting of the Louisiana Farm Council on August 14, 1941, a resolution was adopted expressing the views of this very representative body and placing the organization on record as being opposed to the establishment of a maximum price or ceiling on agricultural products.

The resolution in question is as follows:

Be it resolved, That the Louisiana Farm Council go on record as being opposed to the establishment of a maximum price, or ceiling, on agricultural products; be it further

Resolved, That a copy of this resolution be sent to the Secretary of Agriculture of the United States, to the two Louisiana Senators, and to all of Louisiana's Congressmen.

Louisiana Farm Council: By R. N. Amacker, president, Louisiana Farm Bureau Federation; J. R. Barry, president, Louisiana Sweet Potato Association; J. D. Blanton, president, Louisiana Jersey Cattle Club; Clyde E. Causey, president, Louisiana Poultry Improvement Association; John Doles, chairman, State Agricultural Conservation Committee; Arthur L. Gayle, president, Louisiana Cattlemen's Association; W. F. Giles, president, American Sugar Cane League; R. G. Harmon, President, Louisiana Certified Seed Growers Association; G. S. Harmount, president, Louisiana Potato Growers Association; L. C. Hutchinson, president, Louisiana Pecan Growers Association; W. E. McFatter, president, Southwest Wool Growers Association; Thomas S. Plunket, vice president, American Rice Growers Cooperative Association; G. C. Taylor, president, Louisiana Dairymen's Association; N. C. Williamson, president, Louisiana Cotton Cooperative.

Right Will Triumph

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

EDITORIAL WRITTEN BY EDWARD K. SLATER

Mr. KEEFE. Mr. Speaker, millions of American people, who are largely dependent upon the dairy industry, were shocked and chagrined because of the new standards recently promulgated by the Federal Security Agency in connection with the manufacture and marketing of oleomargarine.

It seems incomprehensible to those interested in preserving and protecting the welfare of the American farmer engaged in the dairy business that the Government should encourage by regulatory action the manufacture and sale of a butter substitute which not only permits but advertises oleomargarine to be manufactured, colored, and sold as butter.

The position of the dairy farmer is most clearly expressed in an editorial written by Mr. Edward K. Slater and published in the October issue of the National Butter and Cheese Journal, entitled "Right Will Triumph."

I esteem it a privilege to be permitted to incorporate this editorial as part of these remarks.

[From the National Butter and Cheese Journal of October 1941]

RIGHT WILL TRIUMPH

Dairymen will win their fight against those who are doing their best to ruin the dairy industry. The high offices of some and the sly maneuvers of others will not save them. Of this we are fully convinced because dairymen are fighting for that which is good, not only for their industry but also for the country. Much confusion prevails now, but the truth will eventually lead honest lawmakers and honest administrators to do what is best for the greatest number of all our people. It may be a long fight, one that will tax the resources of the industry more than anything that has gone before, but it will be worth all its cost to have the issues cleared.

The oleo makers and their aides, in and out of public office, took full advantage of the apathy which has gripped dairy leaders for many years. The latter left the job of protecting their industry against fraud to law enforcement officers and went on their way complacently thinking that all was well. The fight they are now in is the result.

Thirty years ago the consumers of the country were pretty well informed about the oleo industry and its history of fraud and deception. They were in sympathy with the laws governing its production and sale. We say they were in sympathy because otherwise the laws would not have been enacted. Those

were days when Congress reflected the opinions of the voters.

Consumers were informed because for years the fight between the Oleo Trust and the dairymen occupied the attention of each succeeding session of Congress. Now they are not so well informed. Millions of new consumers have come upon the scene and millions of the old have forgotten the reasons why the legislation was enacted. Ignorance of the reasons why oleo is taxed while butter is not is both appalling and widespread.

Many consumers, for instance, can't understand why the butter maker is permitted to use coloring matter in his product while the oleo maker is not unless he pays an additional tax. Just the other day the editor of a great city newspaper, in his efforts to justify coloring oleo yellow, asked "who started using color?" He inferred, of course, that if coloring a food product is wrong the butter maker is more guilty than the oleo maker.

Yes, the butter maker started it, but he didn't use color to make his product look like something else, thereby committing a fraud. He colored it and has continued to color it at certain seasons of the year in order to maintain a uniform color throughout the year. That was, and is, his sole object in using coloring matter. When the oleo maker uses coloring matter he does so in order to make his product look like something else—butter.

If the oleo maker is to be permitted to color his product to simulate butter, flavor it artificially to make it taste and smell like butter, and to fortify it with vitamins to approximate the nutritional value of butter there is nothing left to protect the consumer against fraud and the dairy industry against unfair competition. True, it must be labeled, but the whole history of oleo regulation proves the inadequacy of labeling. Labels are easily removed, and even when retained mean nothing when the product is removed from the package, as it must be before being consumed.

Space does not permit a recital of case records involving fraud in the sale of oleo, but the record is filled with them. The oleo business has, during its entire history, fought to kill or evade legislation to prevent fraud. Makers of oleo have always striven to make it easy for sellers of their product to substitute it for butter. They have always wanted to make it so that it would smell and taste like butter, and look like butter, not oleo.

No maker of butter ever wanted to make his product look like, smell like, and taste like something else.

Yes, dairymen have a fight ahead of them, but it is our firm conviction that right will eventually prevail and that a majority of consumers, now befuddled by shrewd propaganda, will again be in sympathy with adequate legislation to protect them against fraud and the Nation's greatest agricultural industry against unfair competition.

How the Court Martial Works Today

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

ADDRESS BY MAJ. GEN. ALLEN W. GULLION

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Maj. Gen. Allen W. Gullion, the Judge Advocate General and the Provost Marshal General, United States Army, before the junior bar conference of the American Bar Association, Indianapolis, Ind., September 28, 1941:

In my own behalf I thank the conference for the very great honor it has done me in asking me to address it. In behalf of the Army I thank the conference for the excellent work it has done through its committee on public information. I am well aware of the time and effort expended by many of your members in acquainting the country with the necessities of national defense. The Army is also grateful for the devotion and energy with which the conference has cooperated with the American Bar Association's committee on national defense, which has performed such splendid service in aiding soldiers and officers of all ranks in the solution of their personal problems.

The scene is Philadelphia and the year is 1776, but the historic event which I shall recall to your minds is not the Declaration of Independence. On this very day, 165 years ago, on September 28, 1776, the new Pennsylvania Constitution directed: "The penal laws as heretofore used shall be reformed by the future legislature of the State as soon as may be and punishments made in some cases less sanguinary, and in general more proportionate to the crimes." That constitutional mandate and the laws soon passed to implement it were the beginning of the reform throughout our country of the provincial criminal codes which, with their barbarities only slightly lessened, we had inherited or assimilated from England.

The year 1776 also marks the adoption for the Army of the United States of the first articles of war—substantially identical with the British articles then in force. Starting with that easily remembered year of independence, we have had in our country 165 years of experience with two separate criminal codes—the military code and the nonmilitary code—which, for convenience and with apologies to the Roman law for any terminological inexactitude, we Army lawyers sometimes call the civil code.

It may throw light on How the Court Martial Works Today if we look for a moment at the criminal nonmilitary codes in England and America as they existed at our point of departure—1776. Then when we examine the court martial today, both as to its procedure and as to sentences it adjudges, we may ascertain whether the military code has lagged too far behind—whether the conventional estimate of the military mind is correct, whether the military mind is too conservative and hidebound to adapt in its service enlightened modern methods of trial and punishment.

In 1776 in England over 200 offenses were punishable by death—among them larceny of 12 pence from a person, poaching, and consorting with a gypsy. Children of tender years were not exempt from capital punishment. In the Royal Services the punishments were, if possible, more severe, and soldiers and sailors were sometimes flogged to death. In the colonies, generally speaking, the assemblies had in many cases softened the English system, but it was still a ferocious code ferociously administered with retribution publicly made that the Pennsylvania Constitution of 1776 and its implementing statutes reformed. That reformation set an example followed sooner or later by the rest of the country.

I shall digress for a moment to pay tribute to the men who, appalled by "man's inhumanity to man," were principally instrumental in that reformation. The father of the humane Pennsylvania codes was William Bradford, attorney general of Pennsylvania, and later Attorney General of the United States. Bradford freely acknowledges the influence of Beccaria and of Montesquieu. Beccaria published his Essay on Crimes and Punishments in 1764. In that essay he clearly stated the principles of punishment which most of us today believe to be true ones. Those principles are: (1) The purpose of punishment is to deter, not to wreak vengeance; (2) deterrence is obtained not by undue severity but by the certainty and promptness of the punishment; and (3) the measure of punishment is the damage to society caused by the crime. Please bear in mind that last principle, "the measure of the punishment is the damage to society caused by the crime." I shall refer to it later in explaining why certain offenses are punished more severely under the military than under the nonmilitary code.

Although some ancient philosophers had similar ideas, Beccaria was influenced by certain eighteenth century French writings, particularly the Persian Letters and the Spirit of the Laws of Baron Montesquieu. I was once a week-end guest at La Brede, near Bordeaux, still the country seat of the Montesquieu family. The old chateau still stood with the baron's enormous study hall unchanged since his death in 1755, the year of the Lisbon earthquake and the building of Dr. Holmes' Wonderful One-Horse Shay. As I saw the dented leather chair in which Montesquieu sat as he dictated his great work to his daughter, Denise, I thought how he had indirectly influenced the reformation of the criminal code and how his views on the separation of powers, known to leading members of the Constitutional Convention, were importantly incorporated in our great charter of 1787.

Eight days before the adoption of the Pennsylvania Constitution Congress enacted new Articles of War, very similar, as I have said, to the contemporary British articles. In 1806 the articles were revised. In 1916, due to the leadership of my distinguished predecessor, Maj. Gen. Enoch H. Crowder, the articles were thoroughly revised and many changes in procedure made, especially with a view to insuring greater protection to the defendant who, in the Army, is always called the "accused." In 1920, following our experience in the first World War, other changes were introduced to guarantee more protection to the accused.

There are three kinds of courts martial—the summary court, the special court, and the general court. The summary court consists of one commissioned officer, the special court of three or more commissioned officers, and the general court of five or more commissioned officers. Punishing power of the two inferior courts, summary and special, is limited by statute, the summary not being empowered to adjudge confinement in excess of 1 month and forfeiture of more than two-thirds of 1 month's pay. The special court may not adjudge confinement in excess of 6 months and forfeiture of more than two-thirds per month pay for 6 months. The punishing power of the general court is usually, by the wording of the article of war denouncing a particular offense, left to the discretion of the court. That apparently unlimited power does not, however, exist. In a few instances the article itself prescribes the punishment for a particular offense. In all other cases the President under authority given him by an article of war has prescribed a table of maximum punishment which may not be exceeded by any court, inferior or general. The punishment of all purely military offenses has thus been restricted to a reasonable maximum by the President. The punishment of nearly all offenses which are denounced by the common law and by nonmilitary codes has been similarly limited by the President. In the rare event that an offense is committed which is not covered by the President's limit of punishment order the punishment may not exceed that fixed as a maximum for that offense by the United States Penal Code or the Criminal Code for the District of Columbia. The sentence of no court martial has validity until it has been approved by the officer appointing the court.

The sentences of all general courts martial are, as I shall explain a little later on, subject to a series of reviews and approvals or disapprovals in which the record of trial is examined not only to determine its legal sufficiency but also to insure that no sentence of unnecessary harshness is finally executed.

I shall take a general court-martial case and trace it from its beginning, that is, from the time of the commission of the offense to the time of the last review and final action in the War Department or in some cases by the President. Let us assume that the offense is the willful disobedience of the lawful order of a commissioned officer. And here let me revert to Beccaria's third principle, namely, "the measure of the punishment is the damage to society caused by the crime." Here, of course, we should read in place of the word "society" the words "discipline and efficiency of the Army and indirectly the defense of the country." Forgive the cliché but an Army without discipline is a mob and discipline cannot exist unless all lawful orders are accorded implicit and immediate obedience. This is true in peacetime; it is all the more true today when a grave public emergency exists. If in times like these willful disobedience is not sternly dealt with, it will be difficult to obtain from a command that unquestioning and instant obedience so necessary to success in battle. Let us now take the case of a private who has willfully disobeyed the orders of his battery commander and who after having been allowed a cooling-off period of 24 hours persists in his flagrant disobedience. The case against him is started by the writing out of a formal charge supported by formal specifications reciting the details of each instance of disobedience. These charges and specifications must be signed and sworn to by a person subject to military law. This is the first of the safeguards against unfounded accusations. The papers containing the charges and specifications, after having been sworn to, are then transmitted to the accused's commanding officer, normally his colonel. The colonel may investigate the case himself or he may refer it to a lieutenant colonel or some other officer, usually a field officer, for a thorough and impartial investigation. In that investigation the accused is present, is confronted by the witnesses against him, and is shown any documentary evidence against him. He may cross-examine the accusing witnesses and he may introduce witnesses in his own behalf. He is carefully warned of his rights, namely, that he is at liberty to make or not to make a statement as he pleases, but that if he makes a statement it may be used against him. At the close of the investigation the investigating officer makes a formal report in writing, summarizing the evidence for and against the accused and recommending trial or other disposition of the case. When the report of investigation is laid before the colonel he may decide that the case is unfounded, in which event so far as the accused is concerned, the case is closed, or the colonel may decide that the matter may be disposed of by a heart to heart talk with the accused, or by what is called summary punishment, that is, restriction of privileges or imposition of extra fatigue. The accused may, if he so desires, refuse to accept summary punishment and demand a trial. Or the colonel may decide that the case should be sent to a special or a general court martial. Suppose the colonel decides upon a general court martial. In that event he transmits the charges, specifications, report of investigation, and his recommendation to the officer exercising general court-martial jurisdiction, normally the major general commanding the division or similar unit. Up to this point the procedure under the military code is roughly analogous to the finding of a true bill by a grand jury, but it is readily seen that the military investigation prior to trial by a general court martial is much fairer to the accused than the ex parte showing made by a State's attorney to a grand jury in the absence of the accused or defendant.

When the charges and related papers reach the major general or other officer exercising general court-martial jurisdiction they must under the law be referred by that authority to his staff judge advocate, a trained military lawyer, for consideration and advice. The staff judge advocate is not a prosecutor but an impartial reviewer of the charges and the expected evidence. The staff judge advocate submits a written report to the general recommending trial, dropping of the charges, or other disposition of the case. Normally the general accepts the recommendation of his staff judge advocate. Let us suppose that trial is recommended. Thereupon all the papers are referred for trial to the trial judge advocate of a general court martial, consisting, as I have told you, of five or more commissioned officers. For each such court there are appointed a trial judge advocate and an assistant trial judge advocate, a defense counsel and an assistant defense counsel. The defense counsel serve the accused at no expense to him. The duty of the defense counsel is to defend, by all legitimate methods known to the law, any accused ordered for trial before their court. The accused is furnished with a copy of the charges and specifications, upon which he may not be tried until after 5 days have elapsed, unless he consents. He is informed of his right to be defended by the regularly appointed defense counsel and that he may if he so desires employ civilian counsel, in which event the military defense counsel may be excused or serve as assistant counsel as he may elect. He may request additional military counsel and his request will be granted if practicable. All proceedings of the trial are stenographically reported and transcribed and a carbon copy of the record furnished the accused, without cost to him. In the course of the trial every safeguard which a defendant has in nonmilitary trials is afforded the accused and the rules of evidence are applied as they are in nonmilitary courts. In order to prevent junior members of the court from being influenced by the senior members, voting on the question of guilt or innocence and on the question of the sentence is by secret written ballot. Two-thirds of the members of the court must concur in a finding of guilty, otherwise a finding of not guilty is rendered. Here there may be less protection than a civilian defendant has before a trial jury where all 12 members must concur in a finding of guilty. On the other hand, there is no such thing as a hung jury in the case of a general court martial. It may not be inappropriate to point out that the members of the average general court martial are certainly superior in education and probably superior in intelligence to the members of the average jury. They should, therefore, be less subject to prejudice and less subject to an oratorical appeal, whether it come from the trial judge advocate or defendant's counsel.

We in the Army believe that while a guilty man has less chance of acquittal before a general court martial than he has in the hands of a trial jury, an innocent man on the other hand is less apt to be convicted by a general court martial than he is by a jury. When the record of trial is transcribed it is read and subscribed by the president of the court and trial judge advocate and then transmitted to the appointing authority who ordered the trial, or his successor in command. Before the appointing authority takes action he requires his staff judge advocate to submit to him a thorough written review. In that review the evidence for and against the accused is analyzed. The effect of errors, if any, is considered and if any error, considering the record as a whole, has substantially prejudiced the rights of the accused, the staff judge advocate recommends that the finding be disapproved. The staff judge advocate also makes a recommendation whether the sentence should be reduced. If, following the report of his staff judge advocate the appointing authority does not disapprove the finding, the record is transmitted to the Office of the Judge Advocate General in Washington. There at least two officers make an independent review of every record in which dishonorable discharge has been suspended. In the more serious cases in which dishonorable discharge is not suspended or in which a penitentiary is designated as the place of confinement, the record is read by a statutory board of review of three officers who make a careful, written review and submit it to the Judge Advocate General. All cases involving general officers, or the dismissal of an officer or cadet, or the suspension of a cadet, or involving the death penalty are submitted to the Secretary of War and the President. Any important case may be so submitted. All of these reviews (the entire appellate procedure) are automatic and cost the accused soldier not 1 penny. Since the present Judge Advocate General has been in office a systematic and successful effort has been made to harmonize and make uniform general court-martial punishments for approximately similar offenses arising throughout all our general court-martial jurisdictions, at present numbering about 100. A board of officers brings to the attention of the Judge Advocate General any sentence which seems unduly harsh or out of line with that customarily applied in other jurisdictions. If the Judge Advocate General agrees with that view of the sentence he sometimes writes to the officer who exercised general court-martial jurisdiction over the case, normally the major general of the division or similar organization, and suggests a reduction in the sentence. When this action is not effective, or if the need for immediate action is plain, the Judge Advocate General in cooperation with The Adjutant General takes the matter up with the Secretary of War or the Under Secretary of War with a view to having orders issued reducing the sentence to a proper limit. Mr. James V. Bennett, Director of the Bureau of Prisons, Department of Justice, who has been very helpful to the present Judge Advocate General in the latter's effort to harmonize all sentences, wherever practicable and to prevent the execution of harsh sentences, informs me that so far as he knows the Army affords the only example in American jurisprudence of effective procedure whereby sentences for approximately similar offenses are made reasonably uniform.

The problem of administering military justice lies not so much in preventing undue punishment as it does in preventing unnecessary trials. Reviewing authorities may and do, as we have seen, reduce excessive sentences, but it is the company commander who has most to do with reducing the number of trials for he is usually the first officer to whom knowledge comes of misconduct on the part of his men. He it is, therefore, who has most to do with whether an offender shall be tried. It is largely a question of personality and leadership. An alert, sympathetic, and firm company commander can control his men except in rare cases without preferring charges. As a rule, the best companies have the fewest trials. Ready resort to the court martial as an aid to discipline too often means laziness or inefficiency on the part of the company commander. Under the leadership of Secretary Stimson and General Marshall the Army today has the lowest peacetime court-martial rate in its history. On October 20, 1940, General Marshall addressed the Army, saying, among other things:

"The task * * * before us is the expeditious development of a unified, efficient fighting force of citizen-soldiers.

"The Army of the United States, keenly aware of its great responsibility, assumes this task as a profound privilege.

"First in importance will be the development of a high morale and the building of a sound discipline, based on wise leadership and a spirit of mutual cooperation throughout all ranks. Morale, engendered by thoughtful consideration for officers and enlisted men by their commanders will produce a cheerful and understanding subordination of the individual to the good of the team. This is the essence of the American standard of discipline, and it is a primary responsibility of leaders to develop and maintain such a standard."

At the same time the Judge Advocate General circularized all judge advocates as follows:

"In view of the rapid expansion of the Army, I am most solicitous that no case be recommended for trial by general court martial until it has had the most careful consideration of all facts involved, including the nature of the offense, moral and psychological factors, and the salvage value of the offender. I am confident that the exercise by staff judge advocates of imagination, humanity, and sound judgment, with attention to technical details only in cases in which law and justice demand it, will greatly assist in obtaining results which attest the wisdom of Congress in adopting selective service as a peacetime method of personnel procurement."

There has been an encouraging drop in the rate of all three kinds of courts martial in the last 10 years. In 1931, twenty-eight out of every thousand enlisted men were tried by a general court martial. When the present Judge Advocate General took office 4 years ago, sixteen men out of every thousand were tried by a general court martial. For the fiscal year ending last June only four and one-half per thousand were so tried. When the curve was plotted showing the general court-martial rate, it was feared that the decrease in trials by general courts martial would be offset by an increase in the number of trials by the inferior courts, but the curves for the special and the summary courts had fallen in lines roughly paralleling the descent in the general court-martial rate. In 1931, forty-six out of every thousand men were tried by special court. Last fiscal year only thirteen out of every thousand were so tried. In 1931, one hundred and five men out of every thousand were tried by a summary court. Last fiscal year only thirty-one out of every thousand were so tried. When you compare the present court-martial rate with that in President Cleveland's time, the result is amazing. In his first annual message to Congress on December 8, 1885, Mr. Cleveland reported that the Army numbered 24,705 enlisted men and that there had been 14,179 trials by all forms of court martial during the preceding fiscal year. Of course, some men had been tried more than once, but as Mr. Cleveland pointed out, probably over one-half the Army had been tried, the percentage being 57 percent. Last year the percentage was 4.85, but we are not satisfied with that. Four and eighty-five one-hundredths men out of every hundred tried by some form of court martial is not good enough, and we are constantly working to better it. The most vexatious problem arises out of petty thievery. Because of the close community in which soldiers live in barracks and in camps with no way of protecting their property at all times a petty thief disturbs harmony, causes mutual distrust, and breaks up the teamwork necessary to the success of a company in peace or in war. There is an old Army saying, "There is no place in the Army for a petty thief." So until recently the almost invariable custom has been to try by a general court martial all cases of prima facie petty thievery and to adjudge dishonorable discharge in the event of conviction. Dishonorable discharge for stealing brands a boy for life. So many distressing cases came to the attention of The Judge Advocate General that he recently circularized all staff judge advocates on the subject, saying among other things:

"Often a company commander may dispose of a case without trial or trial may be had by inferior court when the circumstances indicate that the taking of property was due to impulse or sudden temptation. The company commander should try to determine whether the taking was the act of a real thief or an unpremeditated act in disregard of property rights, unfortunately not very uncommon in youth. Such cases offer an opportunity for the company commander to exercise discrimination and true leadership to the end that the self-respect of the soldiers and military manpower may be preserved."

In the remarkable series of lectures on the common law which Oliver Wendell Holmes delivered at the Lowell Institute at Boston over 60 years ago, he restated the three theories of punishment, retribution, reformation, deterrence. He showed very clearly that he leaned to the theory of deterrence. Reformation may in some cases be worked by punishment. In its disciplinary barracks the Army employs psychiatry and other methods of modern penology, but in my view there is a point very soon reached beyond which further confinement ruins rather than mends a boy. I have never been able to understand, much less follow, Hegel, protagonist of the retribution theory, and my brain whirls when I try to unravel his cryptic statement: "Wrong being the negation of right, punishment is the negation of that negation, or retribution." Anyhow, retribution, like its analog vengeance, may well be left to the Lord, who has an emphatically laid claim to it. The Army will probably never reach the high plane of Clarence Darrow and proceed upon the theory that punishment does not deter. So the Army will continue in its effort to avoid trials wherever possible and to hold punishment down to that minimum which seems adequate to deter.

But should we go to war, there will be instances where severe sentences may be adjudged for purely military offenses. Those sentences will be reviewed by my successor—for I expect soon to be relieved, and devote my entire time to the office of provost marshal general—and reviewed by the Secretary or Under Secretary. If such sentences after review and final action still seem severe, I trust the country will realize that in the considered judgment of humane and sympathetic men the sentences were measured by the damage to military discipline and efficiency and to the safety of the country and were regarded as necessary.

Progress and Problems in Highway Building

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

ADDRESS BY HON. JOHN M. CARMODY, FEDERAL WORKS ADMINISTRATOR

Mr. CARTWRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address prepared by Federal Works Administrator John M. Carmody for delivery on September 29, 1941, before the annual convention of the American Association of State Highway Officials at Detroit, Mich. Because of illness, Mr. Carmody was unable to attend the convention and deliver his address in person, and it was read by Mr. H. S. Fairbank, Chief of the Division of Information of the Public Roads Administration.

Mr. Carmody's address follows:

My first appearance before this association occurred 2 years ago. Then I felt somewhat like a stranger among you. As Administrator of the newly created Federal Works Agency, I had been given supervision of the Public Roads Administration only about 3 months earlier.

For more than 2 years now, I have worked with you through the Public Roads Administration. I have seen highway construction under the Federal-aid plan progress in an orderly manner and at a rapid rate. The 11,724 miles of Federal-aid highways completed during the past fiscal year by the State highway departments represent an increase over the work of the previous year.

I have also seen the State highway departments respond to the exigencies of the defense program as completely as available funds and the limitations of the law would permit.

By the end of August, construction of 186 miles of access roads and elimination of 13 grade crossings on access roads had been approved under the Federal-aid highway program, and much of the work was under way. Surveys also have been authorized or engineering supervision is being supplied on over 1,450 miles of access road. This work is scattered over about three-fourths of the States and is to cost nearly sixteen and one-fourth million dollars, of which nearly nine million will be paid from Federal-aid funds.

A marked upswing in volume of work on the 78,000-mile strategic network of highways of military importance also is evident. By the end of August, Federal-aid projects completed during the fiscal year, under construction or approved for construction, included 4,298 miles of highway and 145 grade-crossing eliminations. This work is estimated to cost $172,505,000, of which $95,289,300 is to be paid with Federal-aid funds. An additional 1,500 miles to cost about $64,000,000 is programmed.

So I come before you this year not as a stranger but as one thoroughly acquainted with your work and deeply gratified with the cooperation between the Federal Works Agency (through its Public Roads Administration) and the State highway departments. I might add that I wish all my dealings as Administrator of the Federal Works Agency functioned as smoothly as those with the State highway departments.

So much for the past. Now about the future.

The apportionment of Federal-aid road funds for the fiscal year beginning next July 1 will be made in December. I am sure we can count on your continued cooperation in spending funds made available for the Federal-aid system to a desirable extent for the strengthening of weak links in the strategic system. After all, these roads are your main highways. All improvements will be serviceable in the future as well as in the present national emergency. But, above all, I am sure that you of the States, no less than we of the Federal Government, welcome the opportunity to be of service to our country at this critical time. I predict that next fall it will be possible to point with still greater pride to our accomplishments in reconditioning the strategic network.

I do not need to enumerate the weaknesses that exist in the roads of principal military importance. You are already thoroughly familiar with them. You also have a realistic

understanding of the enormous size of the reconditioning job. You know that even the best you can do with the money that will be available will still leave a large amount yet undone. But I am sure I speak for you as well as the Public Roads Administration when I say we will do our utmost during the coming year to fit the important highways of the country for the heavier duty that will be put upon them.

As for access roads to military and naval reservations and defense industries, legislation authorizing special funds is now before Congress. It seems reasonably certain that money will be provided to meet the urgent needs for these special roads.

Thanks to the 1940 authorization to use Federal-aid funds in making engineering surveys of defense roads and to the close cooperation of the State highway departments and the Public Roads Administration in this survey work, we are ready to begin access-road construction almost immediately after funds are made available. And thanks to the insistent effort of the Public Roads Administration the necessary machinery for obtaining preference ratings for defense highway work is in good order.

Funds would have to be made available in impossible proportions to finance all the highway construction that has been proposed in the name of defense. Demands of the cities are particularly heavy. We do not question the need for these improvements. We simply know there is no prospect that such an extensive program can be undertaken at the present time.

But we are glad the metropolitan areas are thinking about their needs. We even hope they will carry their thinking to the point of definite planning for the necessary improvements.

In the Federal Works Agency, we want to do everything that is possible to promote the accumulation of advance plans for future construction projects by States and local governments. Among other projects, we have in mind the advance planning of the highways of tomorrow, and the agencies best qualified to perfect such plans are those that are represented in this convention. The need for immediate planning of post-war improvement of an interregional system has been generally acknowledged.

Congress has given definite expression of its approval of advance planning of the kind of improvements that are proposed. Legislation now pending would provide $10,000,000 for expenditure through the Public Roads Administration in cooperation with the State highway departments to accelerate this planning work.

The President recommended advance planning work of this type at least as early as January 1941. At one time or another he has said of these advance-planning activities:

"* * * It is very wise for us to establish a reservoir of post-defense projects to help absorb labor that later will be released by defense industry. * * *

"* * * If projects are to be ready at hand for rapid inauguration in times of need, the surveys and investigations, the engineering plans and specifications must be prepared in advance. * * * The planning * * * fund * * * would make available a shelf of useful projects without in any way committing the Government to the immediate construction of such works."

In our report, Highways for the National Defense, made last February at the President's request, we called for a $12,000,000 appropriation for advance planning of important highways, "including the extensions of the system into and through municipalities and metropolitan areas." All other funds listed in the report were recommended for financing immediate construction of defense roads.

The conception of an interregional system of main highways has developed since 1935. By that time the pioneer road job of "getting the traffic out of the mud" had been completed. State highway departments and local authorities had surfaced about a million miles of road in 20 years' time.

That was a large accomplishment, but it rather suddenly became inadequate. The Public Roads Administration reported in 1928:

"The design of motor vehicles has been so perfected that speed considerably in excess of former possibilities can be attained without increase of hazard so far as the vehicles themselves are concerned."

So you began a section-by-section adaptation of the old roads to the faster vehicles. But the real problem was to select out of the million miles of surfaced road the highways carrying large volumes of swiftly moving traffic between main population centers, and to modernize this network consistently as a whole in the shortest possible time.

The Public Roads Administration took the first step in 1935 by inviting the State highway departments to join in State-wide highway planning surveys. These State-by-State surveys were to provide the factual foundation for a general highway program for the States and the Nation.

May I interject at this point one comment about these planning surveys? This work you are now doing—your traffic counts, your studies of highway capacities, your research on the life of roads—all this is going to be of the greatest importance in convincing the public that your plans for the highways of tomorrow are sound and that you have developed your plans in a businesslike way.

The public must be convinced of this, because the projects you plan are going to be exceedingly costly. You have the job of convincing the public that the improvements are needed on the scale you plan them, and that the large expenditures are justified. Your highway planning surveys will provide the facts for this educational work.

Shortly after the highway planning surveys got under way, President Roosevelt gave the movement for a modernized network of highways additional impetus when he expressed his interest in the development of a system of interregional routes. In a preliminary conference on the subject in 1938, he personally roughed out on an outline map of the United States his general conception of a network of such highways.

The Federal Highway Act of 1938 carried the evolution of the idea of an interregional system a step further, as you will recall. It directed the Public Roads Administration to investigate and report to Congress on the feasibility of building and operating as toll roads not exceeding six superhighways, three spanning the country from coast to coast and three from north to south.

On the basis of the wealth of basic data which you obtained through the highway planning surveys, the Public Roads Administration concluded that the financing of such a system of roads by means of tolls would not be feasible.

You are familiar with the alternative recommendation—"a master plan for free highway development," including:

"The construction of a special, tentatively defined system of direct interregional highways with all necessary connections through and around cities, designed to meet the requirements of the national defense in time of war and the needs of a growing peacetime traffic of longer range."

The President gave renewed expression of his interest last April when he appointed a national interregional highway committee to review existing data and surveys and outline and recommend a limited system of national highways designed to provide a basis for improved interregional transportation. To members of the committee he expressed the hope that as a result of their recommendations it would be possible to prepare detailed plans and specifications and permit, upon the conclusion of the defense program, a productive utilization of some of the manpower and industrial capacity then available to construct a national system of interregional highways.

The membership of the committee includes Thomas H. MacDonald, Commissioner of Public Roads; G. Donald Kennedy, Michigan State Highway Commissioner; Bibb Graves, former Governor of Alabama; C. H. Purcell, California State Highway Engineer; Frederic A. Delano, Chairman, National Resources Planning Board; Harland Bartholomew, city planner, St. Louis, Mo.; and Rexford G. Tugwell, Governor General of Puerto Rico.

This committee has before it the great mass of factual data on highway conditions and use collected by the State highway departments and the Public Roads Administration. Its conclusions and recommendations will establish a basis for the detailed planning of these most important of all highway facilities.

As you know, the big job in building an interregional system will be at the approaches to and the routes through cities. And the main handicap in making highway improvements in these urban areas is the high cost of right-of-way.

The extension of an interregional system through cities is further complicated by the necessity of complimentary improvement of all express highways radiating from a city. The main highways carrying an interregional system through a city would otherwise soon be overloaded by traffic attracted to its improvements, and the city would develop outward along the interregional routes faster than would be economical.

And this leads to another thought regarding the influence of highway improvements on the growth of a city. In the development of an interregional system, city, State, and Federal highway authorities have a new responsibility—to take counsel with all other agencies that will have a part in determining the future development of the cities before deciding definitely upon the location and routing of the major highways in order that there may be assurance of a proper harmony between the various development plans.

Provision of off-street parking facilities is an unavoidable step in solving congestion problems on main city arteries. Until now we have been building transportation lines with almost no thought of terminal facilities. Places for vehicles to stop are just as much a part of the transportation problem as the highways on which vehicles move. The numerous difficulties that have prevented a more ample provision of vehicle terminals deserve your serious consideration.

These and other complicated problems in developing an interregional system in urban areas call for close cooperation between city, State, and Federal Governments.

But the most important job of all is to lay the idea before the public. The public must understand the problem, the logic and practicability of the solution, and the necessity for the expenditures that will have to be made to create a satisfactory and adequate interregional system of main highways.

There is your job:

One, the educating of the public to accept the bold strokes necessary in developing an interregional system.

Two, the planning of the system now so that when men and time are available for construction, projects will be ready to go.

And three, immediate action to meet the requirements of the present emergency—that is, constructing access roads and strengthening the strategic system as rapidly as Federal-aid and special funds are made available, and working increasingly on the terminal or parking problem.

A Free and Courageous Press

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

EDITORIAL WRITTEN BY WILLIAM J. McHALE, OF THE CHILTON (WIS.) TIMES-JOURNAL

Mr. KEEFE. Mr. Speaker, during the past week the people of America observed National Newspaper Week, and well-earned tribute was paid to the great rank and file of the newspapers of this country, who, in these days of stress and emotion, are maintaining the finest attributes of a great, free American press.

In the newspaper field the weekly paper published in small communities throughout the country plays a most potent and important part in presenting to the American people the truth.

Many editors of small papers are making an outstanding contribution to American welfare by their courageous and unerring presentation of facts to the American reading public. One of the outstanding such editors is the Honorable William J. McHale, editor of the Chilton Times-Journal, published at Chilton, Wis., in the district which I have the honor to represent.

Under date of Thursday, October 2, Mr. McHale wrote and published an editorial entitled "A Free and Courageous Press." This editorial should be read, not only by Members of Congress but by people throughout the country, because of the courageous, clear, and outstanding contribution that it makes toward the preservation of a free and untrammeled press in America.

It affords me distinctive pleasure to incorporate this editorial as part of these remarks:

[From the Chilton (Wis.) Times-Journal of October 2, 1941]

A FREE AND COURAGEOUS PRESS

Scarcely a week passes that we do not find in one or more of the weekly newspapers that come to our desk some caustic criticism of the policies of the Chicago Tribune. Now, we did not sit down to write this little piece with any idea of championing the cause of the Chicago Tribune. It does not need championing from this puny source. Since, however, this is being observed as National Newspaper Week, it strikes us as an appropriate theme for comment.

To begin with, we have observed that some of the soundest thinkers we know—men whose Americanism is as unchallengeable as that of Washington himself—read the Tribune and other periodicals that are fearless and forthright. They read them to be sure they get both sides of controversial issues. They know they can get the Government side in full measure from the speeches and comment of Government leaders, and they want the other side for a balanced diet.

We notice also in our weekly exchanges frequent comment on the enormity of the printed matter sent out by Government departments in Washington. The volume is truly great. We know, of course, that it is written by men on the Government pay rolls, that it is printed and circulated at Government expense, that it will reveal no Government weakness and criticize no Government policy. We do not mean to imply that this propaganda is intended to mislead the public, but we can be certain beyond doubt it does have for its purpose to make the policies and acts of the Government appear to be thoroughly sound and strictly in the public interest.

If we are to get the other side of the case, it must be presented by some fearless independent source. Unless we get the other side, we, the people, are in no better position to form a correct opinion than a judge in a civil court would be to render a just verdict after having heard the evidence of only one side. The Government is able to present its side capably and at great length because it can secure the services of the ablest talent and does not have to count the cost. That's for the taxpayers to worry about. We know, too, that those who hold office by grace of a political party—any political party—will go slow about criticizing the party's policies even when they have grave doubts of their soundness. The fellows in Germany who hail Hitler loudest are the fellows who are reaping the greatest honors and private gains from his regime. The same holds true of the worshipers of dictators elsewhere. Let us not think that human nature is different in America.

Our point is that we don't need to worry seriously about a private publication whose policies may strike us as extreme, because no private organ can hope to acquire instruments of power which the people cannot control. That is not true of government. As far back as 1936 President Roosevelt publicly admitted that the new instruments of public power created at his behest could, in wrong hands, provide shackles for the people of America. That is truly a fearful admission, and in 1936 the President possessed only a fraction of the power which the Chief Executive exercises today. If someone else had made that comment, the partisans of the President would have called it a wild figment of the imagination. But the President himself said it, and it stands as a pertinent reminder of the wisdom of the warning that the price of liberty is eternal vigilance.

The small newspaper publishers know that the constitutional guaranty of freedom of the press has its practical limitations. They know that frank criticism, however justifiable, may bring the penalty of damaging business reprisals. In proportion as their sources of revenue are limited, they are confronted by the practical need of respecting the veto power which their business patrons exercise over their freedom to print what they think. This is true not only of the small newspapers. Many of the larger publications deliberately avoid editorial partisanship for the sake of the larger patronage that a neutral position may win.

For these reasons we are glad that the country still has newspapers that have the interest and courage to buck the popular trend. Whether we consider them reasonable or rabid, their existence should be to us a sign that the constitutional guaranty of a free press is not dead. Should the time come when the country lacks newspapermen capable of risking unpopularity and foregoing financial gains for the sake of their convictions, we shall then have real cause to worry for a free press—and a free country.

We close with a note on the fate of the once free press of Germany. When Hitler attained power in 1933 the House of Ullstein was the foremost German publishing firm. It was located in the heart of Berlin and owned four daily newspapers, one with a circulation of 600,000; 6 magazines, the largest of which had 2,000,000 readers; and a book department that turned out 2,000,000 volumes a year. The firm followed a policy of neutrality in politics and by that policy its periodicals attained tremendous circulation. The board of directors sensed the threat of regimentation in Hitler's rise to power, but even then they did not think they could "afford to have opinions" in political matters. It would be bad for their business.

In the space of 2 years they found themselves not only without the right to express publicly their opinions but without their property as well. They valued their property at $24,000,000. Hitler allowed them one-fifth of that amount and then exacted from them in the form of taxes, fines, and penalties about all that he gave them. Hitler has since enjoyed the profits of the Ullstein property. And the House of Ullstein, had it been Chicago Tribune minded, might have saved Germany the tragedy of the Hitler regime.

After the War, What?

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

ARTICLE FROM THE SOUTHWEST AMERICAN, FORT SMITH, ARK.

Mr. ELLIS. Mr. Speaker, one of the most intelligent and far-sighted discussions that I have seen of our course after the war, appeared in the Southwest American of Fort Smith, Ark., Arkansas' third largest newspaper, in the form of an editorial on October 2. I take pleasure in inserting it in full in the RECORD:

[From the Southwest American, Fort Smith, Ark.]

"If nothing is done now, we shall face at the end of the defense boom a depression incomparably more serious than that which commenced in 1929."

Almost any thoughtful person might have said that. Actually it was said by Leon H. Keyserling, general counsel and deputy administrator of the United States Housing Authority, in a recent speech.

It isn't the man who said it nor the occasion but the challenge of the statement which merits attention.

It is obvious that the present business boom is founded upon defense enterprises. The labor of millions is being employed along with billions of capital to produce armaments. So intense is the effort to produce defense goods that civilian enterprise is suffering. We are developing already a priority unemployment—idleness of workers in plants which can no longer get supplies for normal civilian goods.

It is obvious that there will be a terrific let-down when the need for those defense goods has passed, as it one day will pass.

What shall we do about it?

No one is wise enough to foresee clearly what conditions will be when the defense emergency has ended. No one can see now just how the defense emergency can come to an end. A negotiated peace in Europe under existing conditions would not end the emergency, because it would be necessary under those circumstances for the United States to live in a perpetual state of heavy armament.

Only an end of the war which ends the menace of totalitarian aggressors will permit the United States to slow down its defense effort. How long that will take no one knows. What economic conditions will be in the United States at that time is equally cloudy.

But this much we know:

When war's demands have slackened we shall have millions of men and billions of capital seeking new outlets for their production. We shall have an accumulated shortage of civilian goods in the United States and everywhere else in the world. We shall be needing and buying and making the goods which we could not make during the emergency because of the prior claims of defense. We shall have plant capacity, manpower, and potential markets.

The areas which will recover first and fastest from the afterwar depression will be the areas which have prepared to produce goods economically and make the fullest use of their natural resources.

In the battle for afterwar markets it seems to me the advantage will be heavy in favor of those areas which have developed their power possibilities, conserved their natural productivity and their natural resources, and provided a variety of outlets for the energies of their people.

Here in the Southwest the development of stream-control works seems to me the foundation of our preparation for the afterwar emergency.

Depression in the thirties hit us hard, partially because we were so dependent on agriculture and so handicapped in competition for industrial markets.

We had enough power for our existing enterprises, but not enough for the excess to create a pressure for more industries.

We had some markets for our industrial output, but they were markets terribly limited by the high and unfair freight-rate structure of the Nation.

We had rich lands, but too much of them were wasted every year by floods.

The program of stream control to stop flood losses, develop power, and aid navigation is by no means a cure-all. There isn't any. But it appeals to me that the stream-control program now under way and contemplated under the general Arkansas Valley Authority proposal is the most intelligent approach we can make here in the Southwest to meet the problems of that day when the shouting and the tumult die and we try again to make a living out of our natural resources and our civilian markets.

America Being Sold Out

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD today, I wish to make the following statement. The British war is costing Great Britain $44,000,000 daily, according to a statement made last week by the Chancelor of the Exchequer, Sir Kingsley Wood, when he informed the House of Commons that the British war expenditures have risen so that they are now running to $44,000,000 a day and that the current expenditures are 50 percent higher than during the peak of the World War.

Now let us make a comparison of what the British Government is doing in order to protect itself from expulsion from the British Isles by the ruthless hands of Hitler, and what America is doing to aid the United Kingdom of Great Britain. However, before I give you the figures of our own country, let us just see what our neighbor north of us—Canada—is doing to aid Great Britain. In the first place, Canada has no conscription law. They are not sending so many men to Europe to fight the battles of the United Kingdom, and other British provinces are in a measure doing likewise—some of them nothing at all, such as the Irish Free State. What has the United States done, through the propaganda that is being sent out over the radio and in the newspapers and by correspondence through the United States mails to interest the American people to come to the aid of Great Britain? Naturally my sympathies are with Great Britain in her struggle to keep from being wiped off the map of Europe by a ruthless Hitler. But I am not interested in having America destroyed for the sake of helping Great Britain. That is the point I make, because I am afraid that America is being sold short and Great Britain is the recipient of all the favors that America can give that country at a time when we are not in position to render the service which they want and expect from us. I am unable to find out where Great Britain has ever done anything for America. I am unable to find any American who can point his finger to one particular thing Great Britain ever did for us that they should expect our all to be given to them at a time when they are in great danger. We cannot forget the $6,000,000,000 they owe us from World War No. 1, and because of the situation after the World War the Johnson Act was passed prohibiting America from lending any aid or loaning any more money to those countries which refused to recognize their debt, not even pay the interest. This was the act of Great Britain. Yet today the President of the United States and Messrs. Willkie, Knox, and Stimson want us to tax our people to death in order to give Great Britain the assistance they think she ought to have. I do not share that opinion. Not because of any dislike for Great Britain but because I love America too much to sacrifice our people in this country for the benefit of Great Britain. I am 100 percent for the United States, thus I want to protect her from bankruptcy and from ruination. Our entrance in the European and Asiatic war spells our doom.

Now, let us just view the situation and what we have done since March 11, when the lease-lend bill gave the President $7,000,000,000 to lease and lend to Great Britain or any other nation, ships, TNT, powder, guns—anything to destroy mankind. This will cost every man, woman, and child in America, or the 130,000,000 people in America, the sum of $53.07 apiece. Now the President asks for $5,985,000,000 more, which will amount to $46.78 for each man, woman, and child in America, and will make a grand total cost of $99.85 to each of the 130,000,000 people of this country—to be given away as the President sees fit; too much money for one man; too much power for one man.

This last legislation you will be asked to support before the week is over. Almost $13,000,000,000, after the Johnson Act prohibited any extension of credit to the nations indebted to us because of the last World War. Certainly we are evading the law, and under the terms of the crazy lease-lend bill the President has all this great sum in his power to do with as he chooses. It is contrary to our Constitution to place that much power in the hands of any one man. Why should we have a conscription law and raise an army of 2,000,000 men when Canada does not have one? Why should we compel our boys to go into the service for 2½ years when our neighbor, Canada, does not do it? They are a part of Great Britain. We are independent. It does not seem right to me, and I am opposed to it. It will create hardships on America that we will never get over.

Now, since Sir Kingsley Wood informed the House that Britain was spending $44,000,000 a day, let me inform the American people that since July 1 the American Government has been spending $55,000,000 a day, or over $11,000,000 a day more than Great Britain. We claim that we are not at war, but we are doing almost everything that a nation would do in time of war. That is not all. The worst about the whole thing is the fact that the United States is going in the red each day over $35,000,000 since July 1. According to the statement of the Federal Government dated September 29, we have gone in the red in the past 90 days, or from July 1, the sum of $3,063,885,255.84, and the national debt listed in that statement is over $51,000,000,000. But that does not tell the whole story. We have guaranties that are outstanding in an amount of $10,000,000,000 more than $51,000,000,000. It will not be many months until we will be compelled to lift the debt limit of this country from $65,000,000,000 upward, and you will recall that Jesse Jones said that we could probably stand a ceiling for a debt up to $90,000,000,000. I can say to you and to the American people that any fool can spend money, but it takes brains to make it. Almost anyone can squander our birthright; but when this great debt is created, who is going to get us out? Do the American people think this administration can do it? I want to say now, once for all time, that to my way of thinking this administration can never pull us out of the hole. They have not got the brains; they have not got the ability or the business experience.

Director of the Budget Harold D. Smith predicted on last Saturday that the defense expenditures out of the Treasury will total $18,000,000,000 this fiscal year, or $135 for every man, woman, and child in America. In the near future, he said, defense costs will take 18 percent of the national income. This is more than the defense costs during the World War. Director of the Budget

Smith says that the Treasury will spend $24,581,000,000 this year, and that they would take in $11,998,000,000 in taxes and other revenue, and that our deficit at the end of this fiscal year would be $12,583,000,000. That, you can see, will be over a billion dollars a month. Now, make your comparison with the last fiscal year, when our expenditures were $12,710,000,000, our receipts $7,607,000,000, and our deficit for last year was $5,103,000,000. Director of the Budget Harold D. Smith says that by New Year's we will be going in the red at the rate of a billion and a half dollars a month, and by next June, 1942, we will be going in the red at the rate of $2,000,000,000 a month. Think of it. Does anybody think that, unless something unforeseen happens, this rate of spending does not mean bankruptcy for this Nation? Mr. Speaker, Members of the House, are you going to sell America down the river? Are you one that will destroy her?

Another thing that disturbs me is that the Reconstruction Finance Corporation, according to a statement made by Jesse Jones on October 1, has made a loan of $425,000,000 to the United Kingdom of Great Britain and Ireland, $75,000,000 of which was granted on that date. Now, this loan has been made notwithstanding the fact that the Johnson Act prohibits this country from loaning money to nations who owed us after the World War. Why do we do it? Are we giving any consideration whatever to the future of America? Are we going to wreck our Nation financially by this terrible spending? Again I say to the Congress of the United States: Where are you going to get the money? Again I say to the Congress of the United States: You are responsible for this spending because you have appropriated the money, and unless you cease permitting these expenditures, the responsibility is directly upon you, and your vote will tell the tale. Are you going to permit the President to have $6,000,000,000 more to give away when we are not building up our own national defense as we should?

I say to you now that I am ten times more afrad of communistic activities in America today than I am that Hitler will ever try—yes, ever try—to come to the Western Hemisphere. Then consider the statement made by the President that Stalin has guaranteed freedom of religion to Russia. Can you imagine such a thing, after they have crucified and terrorized all those who tried to worship in their own churches. But it appears that we figure Stalin's and the Russian Government would make good bedfellows for America so that we could give them practically anything they wanted to prosecute the war.

I say in closing, let us allow the Russians and Germans, and all the people in Europe who want to fight, fight it out. But instead of giving all our assistance to Great Britain, war materials and food when we have the hundreds of thousands of women and children in Belgium and Holland and Norway and other countries who are starving for want of food today it seems to me we should compel Great Britain to permit us to give them at least soup in order to sustain life while this war is going on, or we should not send millions of dollars worth of foodstuff to Great Britain at the expense of the American taxpayer. I feel that the Good Lord will not approve of the things that we are doing in America. Certainly I do not.

Keep America out of war. Keep America solvent. Keep America neutral. This European and Asiatic war is not our war. The Monroe Doctrine says we will not interfere with the affairs of the Eastern Hemisphere. Then why do we not do it? Remember the good-neighbor policy. Stay in the Western Hemisphere and obey the Monroe Doctrine. Make America our home, a better place in which to live.

Making Defense Safe for Alcoa

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

ARTICLE BY I. F. STONE

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by I. F. Stone:

[From the Nation for October 4, 1941]

MAKING DEFENSE SAFE FOR ALCOA

(By I. F. Stone)

WASHINGTON, September 26.—The contract drafted by Oscar Ewing, vice chairman of the Democratic National Committee and lawyer-lobbyist for the Aluminum Co. of America, was signed with little change by Jesse Jones on August 17. The terms as given to the press made the contract seem a victory for the Government. Alcoa would operate the new Government-owned alumina and aluminum plants, but 85 percent of the profits would go to the R. F. C. Alcoa would keep a modest 15 percent as its operating fee. It was announced at the same time that Alcoa had agreed to reduce the price of aluminum ingot from 17 to 15 cents a pound. It looked as though shrewd Jesse Jones had driven another of his hard bargains.

It was not explained that the reduction in the price of ingot was a purely oral understanding, binding on Alcoa only so long as it chose to be bound thereby. It was not explained that before this oral understanding was reached the Government had signed two contracts with Alcoa's Canadian Siamese twin, Aluminum, Ltd., for 700,000,000 pounds of aluminum at 17 cents a pound. One Canadian contract was signed on May 2, the other on July 15. Were Aluminium, Ltd., prepared to deliver that aluminum or any considerable part of it this year, it would be well worth the extra 2 cents. But while the cut in price goes into effect at the end of this month, deliveries under the Canadian contract do not begin until next year and continue through 1944. The 15-cent price, as long as it continues in effect, will serve to deter potential competitors in this country, while the Canadian affiliate, which need fear no competition, will continue to get 17 cents or more. The Canadian contracts contain escalator clauses permitting an increase in the price if labor, freight, or raw-material costs go up. The Canadian company will be receiving its raw material, bauxite, from Alcoa in Alcoa ships. It is not inconceivable that Alcoa might be encouraged by these escalator clauses to increase the prices it charges its Canadian alter ego for bauxite and shipping. Nor is there any clause in the Canadian contracts which would prevent Aluminium, Ltd., from buying 15-cent aluminum from Alcoa and reselling it to the United States for 17 cents. This may never happen, but Jesse Jones is rarely so trusting in the contracts he signs.

The signing of the contract was accompanied by announcement of the reduction in price to 15 cents, but the contract itself does not specify any price. The contract provides only that the same price shall be charged for aluminum produced in the Government-owned plants as for aluminum produced in Alcoa's. The peculiar system set up by the contract for pooling the operations of both types of plants and for allocating their expenses and profits is such that any price which covers the costs of the Government-owned plants will yield a very wide margin of profit on Alcoa's.

The contract says that the price of aluminum is to be fixed from time to time by Alcoa and the Defense Plant Corporation, the R. F. C. subsidiary which will hold title to the Government plants. The contract contains provisions for arbitration in the event of disagreement on most matters, but the price of aluminum is specifically excepted from the arbitration clause. In practice this will mean that if Alcoa doesn't get the price it wants the Government will get no aluminum, for there is nothing in the contract which would force Alcoa to operate the plants at an unsatisfactory price or permit the Government to operate them if Alcoa staged a sit-down strike. A sit-down strike will hardly be necessary. If Jesse Jones was willing to sign this contract, he is not likely to balk at giving Alcoa anything else it wants. The expenses of the Government plants will be so high and their share of earnings relatively so small that the R. F. C. will want a higher price set for aluminum in order to cover costs.

The provision for a uniform price is the heart of the contract. The high-cost Government plants will be the price pacemaker for the low-cost Alcoa plants. Alcoa's plants will be obtaining low-cost bauxite from Dutch Guiana and its deposits in Arkansas. The Government plants will have to bear the expense of developing newer and more costly sources of bauxite, much of it low grade. The difference in the cost of bauxite will provide the first, but not the only, extra profit margin to Alcoa under the uniform-price provision. The contract provides other profit margins for Alcoa by permitting Alcoa to overstate the expenses and understate the earnings of the Government-owned plants it will operate.

The expense account is so padded as to give Alcoa large additional operating fees under the guise of expenses. All the costs of operating the Government-owned plants will, of course, come out of their earnings, and as we shall see, the Government will have no way of checking on most of these costs. This is like giving a reporter an expense account and telling him that most of its items will never be audited. In addition to all items which Alcoa considers operating costs, it is allowed one-fourth cent per pound of aluminum for expenses, salaries, and facilities used in connection with operation of the Government plants, "even though part of the time of such employees and part of such facilities are also used in part in connection with Alcoa's own operations or own overhead." Jesse Jones ad-

mitted on the stand before the Truman committee that this might include part of the rent for Alcoa's office building in Pittsburgh.

On top of all ordinary expenses and these part-time expenses the contract provides that "in order to compensate Alcoa for such portion of its own overhead as cannot thus be specifically allocated to the operation of the leased plants, Alcoa may also include as an item of operating expense the sum of one-half cent per pound of aluminum produced in the leased plants (in which calculation 2 pounds of alumina will be considered the same as 1 pound of aluminum)." Two pounds of alumina make 1 pound of aluminum, and Hugh Fulton, counsel to the Truman committee, pointed out at the hearings that there was nothing in the contract to prevent Alcoa from taking both the quarter-cent and the half-cent on each 2 pounds of alumina and then an additional quarter-cent and half-cent on the pound of aluminum made from those same 2 pounds of alumina. On this basis, according to Fulton, the present contract, plus a new contract being drawn up with Alcoa for another 600,000,000 pounds of alumina capacity, would give Alcoa $2,100,000 a year under the quarter-cent clause and another $4,200,000 a year under the half-cent clause. Even if the quarter-cent for part-time services does not duplicate items that Alcoa will have already included in operating costs, the extra half-cent is really a disguised fee equal to a 4-percent return on a $100,000,000 investment. This isn't bad considering that Alcoa will not have a cent of its own money invested in these plants.

The contract does provide that Alcoa shall keep separate cost-accounting records on the operation of the Government-owned plants, a point which would be taken for granted in most agreements of this kind but is regarded as quite a victory for the Government in this case. But these figures can mean very little unless the Government knows the comparable figures for operation of Alcoa's own plants. Otherwise it has no way of knowing whether Alcoa is dealing fairly with it. The contract gives the Government the right to an annual accounting for purposes of comparison, but the only figures on the operation of its own plants which Alcoa agrees in advance to furnish are of a very limited character. They would cover merely the cost of labor and five raw materials entering into the manufacture of aluminum. These are alumina, power, cryolite, aluminum fluoride, and carbons. As for any other items of cost or expense, the contract says, "Such certified public accountant shall also report to Defense [Plant] Corporation with respect to any other facts deemed by both Defense Corporation and Alcoa important and pertinent to a comparison of the operations in the leased plants with operations in other plants." This clause gives Alcoa the right to refuse any of these facts on the ground that they are not "important and pertinent." I do not think provisions of this sort would be accepted by Jesse Jones in leasing a plant of his own, or that they will encourage Alcoa to operate the Government's plants with the maximum efficiency and economy.

The contract provisions for estimating revenues show Jesse Jones in as gullible a mood as do the provisions for estimating expenses. The simple way to estimate the revenues of the Government plants would be to multiply their output by the price per pound received, as the simple way to operate the plants would be to have them produce aluminum and furnish it at cost to the Government. This is too simple for Alcoa. The contract has an appendix A headed "Method of computing profit or loss," which is based on the elementary method of accounting known as heads I win, tails you lose. Instead of the Government-owned plants being credited with their actual production, they are to be credited with their "theoretical" production. The intricate and tricky formula for arriving at this production reads as if Alcoa had called in Einstein as a consultant. I am going to simplify it; even simplified, it may make the reader bite his nails.

First, the actual amount of aluminum produced in the Government plants is computed, and then it is added to the actual production in Alcoa's plants. This sum is then added to the amount of "any aluminum purchased and received by Alcoa" during the year. The percentage of Government production to the second sum is then applied to the first, and this provides the figure for "theoretical" production. Let us say that during the year the Government plants make 100 pounds of aluminum and Alcoa's plants make 100 pounds and Alcoa buys an additional 100 pounds elsewhere for its fabricating plants. The ratio of Government production to this total is 1 to 3. The ratio of 1 to 3 applied to the 200-pound combined production of the Government and the Alcoa plants gives 66⅔ pounds. The Government plants, instead of being credited with their actual production of 100 pounds, would be credited with a "theoretical" production of 66⅔ pounds. Since revenues are pooled, Alcoa would no doubt siphon off the extra gravy in those theoretically nonexistent extra 33⅓ pounds.

Next week, in closing, I will show that in the rigging of this contract and in current negotiations for additional sources of aluminum Alcoa is using Jesse Jones and the O. P. M. to safeguard its monopoly position not only at the expense of the Government but at the expense of the defense program.

Vote at Every Election

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

Mr. BENDER. Mr. Speaker—

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude. (Fifteenth amendment to the Constitution of the United States.)

The right of election is the very essence of the Constitution.

Election Day is Independence Day. So long as we retain the right to select our own public officials, we retain our freedom.

Every time we fail to exercise the privilege of voting we forfeit our right to criticize those who have gained public office. Every time we find it more convenient to stay at home or discover that we are too busy to vote we abandon our American heritage of freedom.

From indifference to the choice of public officials, it is only a small step toward indifference to our rights of free press, free speech, free worship. We cannot join the long and growing list of those nations which have forgotten all human liberties.

Municipal elections, town meetings, State and county elections—every one of these plays its part in the development of American history.

You owe it to yourself and to your Nation to vote at every public election.

Let the people of every city in America demonstrate by their votes that they cherish the love of freedom for which our country stands.

Let no election in our country go by default. If you are registered as a voter, go to the polls.

Other nations speak through bullets. Let America continue to speak through a tremendous flow of ballots.

Vote at your elections November 4. It took thousands of years to win you that right to vote. Exercise it.

The Secretary of the Interior Visits the Pacific Northwest

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

ARTICLE BY RICHARD L. NEUBERGER

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include herein an article by the eminent publicist, the Honorable Richard L. Neuberger, from a recent issue of the Portland Oregonian.

Mr. Neuberger discusses our Secretary of the Interior, the inimitable Harold Ickes, in his own colorful and distinctive fashion. I wish it were possible to include the attractive photographs with which the newspaper article was embellished, in this extension of remarks. But let the author speak for himself.

[From the Sunday Oregonian of Portland, Oreg., September 7, 1941]

MR. ICKES SPEAKS ON CONSERVATION—SECRETARY OF THE INTERIOR BELIEVES THAT FUTURE GENERATIONS WILL COMMEND DECISIONS THAT LED TO CREATION OF WASHINGTON'S OLYMPIC NATIONAL PARK

(By Richard L. Neuberger)

Like "the boss," which is his way of referring to the President of the United States, Harold L. Ickes says he would like to return to the Pacific Northwest "again and again and again."

The Secretary of the Interior, under whose jurisdiction are a fourth of the lands of Oregon, Washington, Idaho, and Montana, walked slowly along the shores of blue Lake Crescent in the Olympic National Park. He pointed up at the great Douglas fir "rain forests" mantling the steep slopes of Storm King Mountain. A shred of cloud hung like a banner on Storm King's pinnacled summit.

"This is a wonderful part of America," said Mr. Ickes, who has had charge of the national parks longer than any other Cabinet officer in history. "The boss is absolutely sold on it. He thinks the Pacific Northwest is one

of the most magnificent spots on earth. Bonneville and Grand Coulee Dams, the Olympic National Park, and countless other undertakings are all indications of the President's faith and admiration for this region."

TREES WERE GROWING BEFORE COLUMBUS SET SAIL

The Secretary sat down on a log and looked out across Lake Crescent's cobalt surface. "I regard this park," he said, "as one of the most worthwhile achievements of my administration as head of the Interior Department. In this park are set aside for all time forests which can never be duplicated. We have protected forever from ax and saw trees that were growing before Christopher Columbus set sail from Huelva. A thousand years from now, when our age is but a memory, the men and women of the future will be glorying this scenery."

Mr. Ickes explained that he has no intention of asking for further national parks in the Pacific Northwest. "It has been claimed," said he, "that I have ambitions to lock up vast expanses of the region in additional parks. This is not true. I am not even asking for the creation of new national monuments. The Forest Service has declared that there are areas of such superb grandeur in the Northwest that they ought to be preserved in perpetuity.

"For my own part, I would like to see the establishment of recreational areas in appropriate instances instead of national monuments. Instead of the power under which the President may establish national monuments, which he now has, I suggest that he be given the lesser power to create national recreational areas.

"In such areas hunting and fishing and mining and grazing and water development for power and irrigation would be permitted. Of course, lumbering would not be, but neither would lumbering be allowed if effect were given to the Forest Service policy of setting the same regions aside as primitive areas."

AMERICANS DESIRE TO ENJOY NORTHWEST SCENERY

The Secretary said he hoped this would assure the people of the Northwest that he has no desire to lock up enormous stretches of land in new national parks. "We must strike a balance," he declared, "between the use of resources and their preservation. Some places are admirably fitted for recreational purposes only. Travel is one of the great industries of the Pacific Northwest. Millions of Americans look to this region for soul-satisfying scenery, for fishing, for hunting, for tramps and rides across ever-changing uplands."

Mr. Ickes walked up the steps of Storm King cottage, nestled among tall firs, and sat down in the log living room. He was shown several of the recent motor logs sponsored by the Oregonian and the Oregon State Motor Association. Carefully he looked over two on Mount Rainier Park in Washington and the Mount Jefferson wild area in Oregon.

Pointing to the stories, he said, "Our people should be encouraged to visit places like this. Communion with the woods and wilderness is good for our citizens. The more of them who know about the forests and mountains the better."

Besides being Secretary of the Interior, Harold L. Ickes is also Oil Administrator for the President. He was asked about the effect on travel of shortages in facilities for transporting petroleum. "Well," he answered, slowly, "there may be some adverse effect for a time.

"However, the travel to places like the Olympic National Park may not begin again in force until next spring. By then we sincerely hope to have the problem solved, at least on the Pacific coast. Oil tankers are being constructed faster than ever before. American ingenuity and resources are turning out these vessels in record time."

Mr. Ickes explained that the shortage in oil transportation stemmed from the fact that tankers ordinarily used to take petroleum to American ports are now in use on the vital run to England. "It is utterly imperative," he said, "that Great Britain be supplied with oil, which is one of the main sinews of the war against Hitler."

He pointed out that domestic needs in the United States must be regarded as secondary to the shipping of oil across the Atlantic for the British Fleet and the planes of the Royal Air Force.

"However," the Secretary continued, "by next spring our people may again be able to step hard on the throttle and drive where they please. We are doing our utmost toward that end, anyhow. I am having the laboratories and research men in my Department make countless tests with new types of motors and fuels. Perhaps we can find a way of getting considerably more mileage per gallon. That would make motorists and travelers happy and solve many problems. I have high hopes that some of these experiments may prove successful.

"At least," he went on, "I am having the Department investigate thoroughly every suggestion and idea which comes along. You never can tell when some idea will be the real one, and I don't want anyone to be able to say that Ickes turned down a scheme that did wonders and broke the bank."

BOUNDARIES HELD JUSTIFIED IN OLYMPIC PARK

Mr. Ickes strolled out on the veranda of the little cottage. He looked across the lake to the wooded hills beyond. Night was beginning to shroud the Olympic Peninsula. The last shafts of day tinted the green slopes. "No wonder," he said, "that the boss was sold on this place as a national park when he was here in 1937. It was raining cats and dogs that day, but President Roosevelt saw at once the possibilities of the region. That was why he stated in Spokane, as he left the Northwest, that he was certain of the future of these States."

The Secretary pushed an old straw hat back on his head. "It wasn't an easy job to set aside this park," he volunteered. "There was plenty of opposition.

"I suppose I made many enemies insisting on an adequate park with wide, generous boundaries. All I can say is that I feel it was worth it. I am sure that you on your motor-log trip will agree to that, and I am sure that men, women, and children will feel that way for many generations to come. Surely no one can really grudge to posterity this beautiful corner of our vast land."

The Olympic National Park was established by Congress and President Roosevelt in 1938, 1 year after the President visited the Northwest to dedicate Bonneville Dam and was so impressed by this section of America. It is the Nation's newest national park.

The Washington State Progress Commission describes it as "the last big woods." The park is approximately 892,000 acres in extent, and is in the extreme upper left-hand corner of the United States. From its mountain peaks the ocean, Puget Sound, and the straits leading to Vancouver Island present a great panorama of salt water.

A few years ago a bitter and prolonged controversy, in which Secretary Ickes was the central figure, surrounded the creation of the park. Many people contended that the park boundaries were too far-flung and would remove from production highly valuable forests and timberlands. The Forest Service felt that its multiple-use program would provide both recreation and economic advantages for the area. However, President Roosevelt, on his 1937 journey, peered through the rainstorms and decided that a national park with ample territory was desirable.

RAIN FORESTS RANGE OVER OLYMPIC PENINSULA

One of the President's main reasons for favoring a big park was to protect the fir, spruce, and hemlock forests stretching like a great, green carpet around the Olympic Mountains. Secretary Ickes urged such a course on the President; such a course, in turn, was urged on the Secretary by John B. Yeon, well-known Portland conservationist.

If anywhere in the Northwest there are forests primeval, the Olympic Peninsula is that place. Within a few rods of Lak Crescent Lodge and Storm King Cottage the thick woods begin. Long before white men looked across the sea and saw America's distant shores these trees were growing. They grew in the rain. No part of continental United States has heavier precipitation than the Olympics. Rain in some parts of the peninsula reaches 122 inches. The forests are of tropical thickness and density. Woodsmen call them rain forests.

Spanish moss clings to trunks and branches. Ferns are higher than a man's head. Logs and branches are piled in reckless abandon. The trees of ages ago line the ground, victims of old age—age counted in epochs rather than years. Windfalls are 50 feet high and as tight and compact as stone fortifications. In places sunlight reaches through only in filtered shafts. These are the sort of woods small boys read about in Tarzan, and one might almost expect the fabulous ape man to come swinging along on one of the great vines or creepers.

If the climate were warmer, the forests of the Olympic Peninsula would be tropical in quality and filled with palms and mangroves and parrots and pythons. They have as much rain as some of the woods of the Congo. But the climate of the peninsula is temperate, and so the forests are made up of fir and cedar and hemlock and spruce.

The late Robert Marshall, director of recreation for the Forest Service, called the "rain forests" of the Olympics one of the last great memories of the America which used to be. They are more like stockades than ordinary woods, and in them one gets the sense of standing in a great cathedral or temple rather than in the outdoors. Some of the trees are 300 feet high and as straight as Corinthian columns.

Best known of the resorts in the Olympic National Park is Lake Crescent, along the extreme northern edge of the area. Trout fill the lake, and in the hills to the south there are trails of boundless beauty and intrigue. Lake Crescent is only 20 miles from Port Angeles, one of the taking-off places by boat for Victoria. Many Portlanders spend their vacation on its evergreen shores. When the motoring party trudged into the lobby of Lake Crescent Lodge, Dr. and Mrs. Arthur Rosenfeld, of Portland, and their children, Helen, Eddie, and Alan, were sitting on a lounge waiting for the dinner chimes. "My wife and I have come here each summer for the past 19 years," the doctor said, "We think it's the greatest spot in the United States."

Lake Quinault at the extreme southern end of the park is another famous resort. The lake is still in the Olympic National Forest and under the jurisdiction of the Forest Service although it lies along the park boundary. The entire park is ribbed with trails. These are wilderness trails in every sense. Roads penetrate but a small portion of the park's total area. Most of it is accessible only to the adventurer willing to go by horseback or on foot. The Hoh Valley and the Queets River present spectacular vistas and picturesque trails.

Yet primarily the Olympic National Park is a museum for the forests of America's yesterday. In the first World War the Government built a twisting railroad line into the peninsula to bring out spruce for airplanes. The peninsula is a storehouse for the oldest trees in the Nation.

"Surely future generations," says Miss Harlean James, famous authority on parks and planning, "will rise up and call blessed

this generation which acted before it was too late to save these pedigreed forests of Douglas fir, Sitka spruce, and Alaska cedar and hemlock."

So we started back over the 300 miles of good roads between the Olympic National Park and Portland. Bill Pease clicked his final picture of Secretary Ickes at Storm King cottage and threw his last flashlight bulb in the fire. The Secretary trudged back into the log cabin. We wheeled the white car along the highway through a corridor of trees. Through the trunks we could see the wide water of the lake. Across it a gleam came from the windows of Storm King cottage and the nearby inns and lodges. The car crossed the boundary of the park and the end of the 1941 motorlog season was near at hand.

The Petroleum Situation—the Value of Water-Borne Commerce

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

Mr. DONDERO. Mr. Speaker, much has been said in reference to the shortage of gasoline and oil along the eastern coast and its hinterland, owing to the lack of tanker transportation.

This situation brings to the attention of our citizens the value of our Federal waterway systems, and under leave to extend my remarks in the RECORD, I wish to insert here a letter and statement from the Marine News from its editor, Mr. S. Willson Richards, dated September 30, 1941:

THE MARINE NEWS,
New York, N. Y., September 24, 1941.

The Marine News will say editorially in its forthcoming issue:

"Until a gasoline and oil shortage loomed along the Atlantic seaboard, owing to a shortage of tankers, it is probable that only a handful of people knew that it has cost about 10 times more to transport petroleum products by rail than by water. This is but one of the many examples of the immense savings through water transportation.

"Almost all the iron and steel, so vital now in implements of defense, is manufactured from ore transported about 1,000 miles over the Great Lakes waterway system, with its Federally constructed locks, channels, and canals, at about one-ninth of the cost of other means of transportation. Millions of tons of coal, grain, lumber, steel, and other bulk materials move over the Nation's inland and intracoastal waterways annually with tremendous savings to the people. These savings, when contrasted with the taxation for building and maintaining the Federal waterway system, show a credit balance of immense proportions.

"The vessels making the mighty Navy of the Nation were all constructed in shipyards located on Federal waterways; their inshore movements are through waterways prepared by the Federal Government. The Nation's greatest bulwark of safety are its intracoastal and inland waterways, its harbors and connecting channels. Unlike their commercial worth, their value here cannot be measured in dollars; it is inestimable.

N. R. Danielian Argues With the Canadian Press

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 8, 1941

EDITORIAL AND LETTERS FROM THE GAZETTE, MONTREAL

Mr. BEITER. Mr. Speaker, it has been called to my attention from several sources recently that Mr. Danielian, director of the St. Lawrence survey for the Department of Commerce, has been carrying on a running battle with the Gazette, Montreal. Mr. Danielian, true to form, presumes to tell everyone how much he knows about their business.

His publications on the St. Lawrence project for the Department of Commerce are anything but judicious documents presenting in an unbiased manner plain truths. In these publications he takes an opposite view to practically all labor, industrial, and commercial leaders engaged in the various industrial, transportation, mining, and commercial businesses of the country—men who have devoted their lives to making these bulwarks of democracy virile.

Now he steps across the boundaries of our country to enter upon a controversy with one of the great Canadian newspapers. The unfortunate part of this dispute is that he is involving the whole Department of Commerce.

The Canadian answers completely dwarf the arguments for the St. Lawrence seaway presented by Mr. Danielian.

Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following articles published in the Gazette, Montreal, on August 27, September 17, and September 23. From these the House may judge the wisdom and prudence of chief propagandist N. R. Danielian, and behold at first hand the utter weakness and fallacies of the St. Lawrence seaway defense argument.

[From the Montreal Gazette of August 27, 1941]

WE LEARN ABOUT OURSELVES

Promoters of the St. Lawrence seaway project at Washington are supplying some interesting information about Canada, interesting and surprising, all the more so in that it emanates from an official source. A booklet has been issued containing certain remarks by Congressman L. C. RABAUT, Democrat, of Detroit, who asked a number of questions. Answers to these questions are supplied by M. J. Danielian, Director of the St. Lawrence Survey, in the United States Department of Commerce. Says Mr. Danielian: "The St. Lawrence project would strengthen our defenses in the northeastern corner of the North American Continent by giving us a protected inland water route to our new military base at Newfoundland. At present, because there are no rail connections east of Quebec, all supplies and equipment for our Newfoundland base must be sent through the Atlantic sea lanes. In time of war this route might be hazardous, but with completion of the seaway defense materials could be sent down the St. Lawrence River to Newfoundland without fear of interference from enemy naval units."

There is so much wrong with this statement, particularly as made by a Government official and used for propaganda purposes, that any Canadian reader must be inclined to question the accuracy of his own reading. So far as water facilities are concerned, these are present now and can be used for the purpose which Mr. Danielian has conjured up. There is a 14-foot all-water route from the foot of Lake Ontario to Montreal and a route of a minimum depth of 35 feet from Montreal to Newfoundland. Ships of 14 feet draft can transport supplies from any point on the Great Lakes to the head of ocean navigation, and vessels of 35-foot draft can operate between Montreal and Newfoundland, or from Sorel, Three Rivers, or Quebec, all ports with modern equipment and connected by rail with all parts of the United States. So much for that.

Mr. Danielian asserts that "there are no rail connections east of Quebec." He has not so much as glanced at a Canadian railway map, assuming, of course, that he has made his statement in good faith—that he is honestly ignorant of the facts. The main line of the Canadian National Railways, extending down into the maritime Provinces, reaches the port of North Sydney, Nova Scotia, a point within 100 miles of the Newfoundland railway terminus at Port Aux Basques. Materials for the United States base in Newfoundland can be sent to Sydney by rail from any place in the United States. It is an extraordinary thing that the Director of the St. Lawrence Survey, speaking and acting for the United States Department of Commerce, should make himself responsible, and the Department responsible, for a statement so widely at variance with the facts that he did not even take the elementary precaution of ascertaining what the facts are. The information was easily available, probably in Mr. Danielian's own office, but it was not obtained and apparently not sought.

The trouble is that this kind of propaganda is likely to influence congressional and other opinion in the United States and to have a bearing upon congressional judgment. An assertion from a presumably authoritative source is always likely to be accepted because of its origin. In this instance acceptance is certain wherever knowledge of the truth does not exceed Mr. Danielian's understanding of it. If the St. Lawrence waterway issue is to be decided on its merit, well and good, but it should not be determined on misstatements and misinformation.

WASHINGTON EXPLAINS

SIR: Your editorial of August 27 entitled "We Learn About Ourselves" has come to my attention. In it you take issue with statements published in a pamphlet by Congressman L. C. RABAUT, of Michigan, with regard to the effect of the St. Lawrence seaway upon the defense of the northeastern corner of the North American Continent. Since these statements were supplied by the Department of Commerce, and the Department was made the subject of criticism by your distinguished paper, may I be permitted the privilege of clearing up some misapprehensions in your editorial? I request the courtesy of the requisite space in your columns.

It is asserted in the publication issued by Congressman RABAUT that the "St. Lawrence project would strengthen our defenses in the northeastern corner of the North American Continent by giving us a protected inland water route to our new military base at Newfoundland. At present, because there are no rail connections east of Quebec, all supplies and equipment for our Newfoundland base must be sent through the Atlantic sea lanes.

In time of war this route might be hazardous, but with completion of the seaway defense materials could be sent down the St. Lawrence River to Newfoundland without fear of interference from enemy naval units." You take issue with this statement on the grounds that there is water transportation now between the Great Lakes and the Atlantic Ocean, restricted to 14-foot navigation over the St. Lawrence River above Montreal and 35-foot navigation from Montreal to the sea. You propose making transshipments at Montreal, Three Rivers, or other points. No one questions the feasibility of your proposal and there is nothing stated in Congressman RABAUT's publication which denies this possibility.

You forget, however, that the statement which you quote for purposes of criticism was in answer to the following question: "Would the seaway-power project impede or aid our defense program?" Would you not concede that the transshipment at two points, on the Upper Lakes and at Montreal and Quebec, increases the cost of transportation and certainly enables delay? There are cases where such hard-way-of-doing-things makes the present waterway useless. Has the Gazette considered, for instance, the difficulties of transshipping, from lake carrier to canal carrier and then again to deep draft vessel, a 16-inch coastal defense gun? It is difficult to comprehend how anyone can question the greater desirability of a direct route without intermediate transshipment and delays between the arsenals and factories in the Great Lakes cities and our mutual defense outposts.

You also take issue with the statement that there are no rail connections east of Quebec. In refutation of this you point out that there is a rail connection to the port of North Sydney, Nova Scotia, from which supplies could be shipped a hundred miles across to Port Aux Basques, Newfoundland, and then by rail to final destination in Newfoundland. Again, here you prefer a circuitous, expensive, and slow method of transportation which will involve several handlings, to the direct method which the accredited Governments of our two countries seem to prefer. Let me state that the St. Lawrence survey of the Department of Commerce is fully cognizant of the rail services available south of the St. Lawrence River to Nova Scotia. However, the main point at issue in our statement is the defense of the northeastern corner of the continent, which, of course, includes Newfoundland, the north shore of the St. Lawrence River, and the Gulf of St. Lawrence and Labrador. You know full well that when Quebec is used as a point of reference in the statement that there are no rail connections east of this city, the statement should be read in the light of the main problem—defense of these northeastern areas. Certainly you do not claim that there are adequate rail connections from Quebec beyond to the north side of the Gulf of St. Lawrence. I do not wish to presume knowledge of the Canadian rail situation superior to your distinguished paper but all the sources I have been able to consult, including the Canada Yearbook, published by your Government, leave no doubt in my mind that there are no adequate rail connections at present that could serve in an emergency to supply transportation to eastern Quebec Province and Newfoundland. Reference to any Canadian railway map will confirm this.

N. R. DANIELIAN,
Director, St. Lawrence Survey.
DEPARTMENT OF COMMERCE,
Washington, D. C., U. S. A.,
September 11, 1941.

MR. DANIELIAN IN TROUBLE

SIR: Mr. N. R. Danielian's attempt to answer your fair criticisms of a recent statement of his, as published in your correspondence column of September 17, does not improve his case. You quoted his statement that "at present, because there are no rail connections east of Quebec, all supplies and equipment for our Newfoundland base must be sent through the Atlantic sea lanes." He answers that he meant that he was thinking of the defense of Newfoundland, the north shore of the St. Lawrence River, and Labrador. What he said flatly was that supplies could not be sent to Newfoundland for the lack of rail connection east of Quebec, and that is flatly untrue. He again says that there is no doubt in his mind "that there are no adequate rail connections at present that could serve in an emergency to eastern Quebec Province and Newfoundland." That is nonsense, and, in any event, what he is recommending is not further rail connections to the north shore of the St. Lawrence but the deepening of the St. Lawrence canals. At present the north shore of the St. Lawrence east of Quebec is served from the adequate rail lines on the south shore and it would still have to be so served after the canals above Montreal were deepened.

Disingenuously or from lack of knowledge, Mr. Danielian says that, for example, at present, a 16-inch coastal-defense gun brought from up the Lakes to the lower St. Lawrence would have to be transferred from a Lake carrier to a canal carrier and then again to a deep-draft vessel. Nothing of the kind would occur, as every transportation man in North America knows. The modern ships which ply the canals, and especially the package freighters, are quite able to and do reach upper Lake ports and lower St. Lawrence ports. If the United States War Department wanted to send a shipload of supplies from Cleveland to St. Simeon or Tadoussac or Notre Dame de Betsiamites, or anywhere on the north shore of the St. Lawrence, it would, if it wanted to use a water route, charter a boat capable of doing this by one movement. It would not call in Mr. Danielian and ask him to arrange shipment involving two transfers. Almost certainly, even in the case of shipments from Cleveland, and absolutely certainly in the case of shipments from points not on the Great Lakes, the United States War Department would send such shipments by rail to one of the many ports on the Intercolonial line, and then by boat to destination, thus increasing the speed of shipment very greatly.

Shipments to Labrador are handled in summer by steamer and in winter by rail to Sydney and then by steamer. They would still be handled in those ways, even if the canals were deepened. This is the way in which shipments will have to be handled even if the Congress and Parliament approve a silly scheme, until 1948. After 1948 it would still be the best way of handling the supplying of any military bases on the north shore of the St. Lawrence or in Labrador.

I trust that Mr. Danielian will answer this comment on his absurd suggestion.

TRANSPORTATION.

Another Attempt To Smear

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 8, 1941

EDITORIAL BY FRANK SPARKS

Mr. HOFFMAN. Mr. Speaker, as every Congressman well knows, let him be loyal to our country before he considers the interest of any other country, and he may expect a blast or, if you prefer, a handful of mud from those who still believe we should replace the Declaration of Independence with a declaration of interdependence.

A striking example of the smear which those who think of Britain first hand out to every Congressman who refuses to follow their lead into a foreign war is referred to in an editorial of Frank Sparks which appeared in the Grand Rapids Herald of September 27.

There is not a Member of Congress who ever questioned the ability, the sincerity, or the loyalty of BARTEL J. JONKMAN. Only a small group of gentlemen, satisfied that they, and they alone, know loyalty when they see it, would venture to question his loyalty.

Since he came to Congress, Congressman JONKMAN has earned, he deserves, and he has the respect of his fellow Members of Congress and doubtless the people of the Fifth Congressional District of Michigan, who do not believe that the United States is so weak and so helpless that she must hide behind Great Britain or any other nation, will long return him as their trusted Representative.

The editorial to which reference was heretofore made is as follows:

[From the Grand Rapids (Mich.) Herald of September 27, 1941]

WHERE THE "DISLOYALTY?"

Congressman JONKMAN, like every other American citizen has a guaranteed right to think what he thinks and to express his thoughts on whatever matter or in whatever manner he may choose. The same applies to Dr. Charles Warren Heisley, and all the members of his Committee to Defend America. The fact that Mr. JONKMAN happens to be a Congressman does not deprive him of a single one of his rights. Indeed, if he is to do his duty by his country and by his constituents who sent him to the Congress, he should be even more critical than one of us ordinary persons.

So we think the Committee to Defend America, which in an open letter charged Congressman JONKMAN with "disloyalty" when he voiced his objections to some of the methods now being pursued to take us into the European war, arrogated to itself quite a little excess importance and authority, while at the same time attempting to deprive Mr. JONKMAN of some of his own inalienable rights as an American citizen and a Congressman of the United States.

The Committee to Defend America deplores Mr. JONKMAN's opposition to some of the peregrinations of the administration, and holds that the United States is committed to certain policies. May we ask who committed this country? Was it the Congress in manner provided by the Constitution which formulated them? Did the Congress, as representatives of the people of the United States, authorize the giving away of 50 destroyers, the taking over and manning of Iceland, the extension of our territorial limits almost to the shores of England, the ordering of our Navy to scour the oceans and shoot on sight at any Axis craft?

Not at all. All this was done by the imperial decree of the President and we venture to say contrary to the will and wishes of a vast majority of Mr. JONKMAN's constituents.

Is it "poor taste," as the Committee to Defend America insists, for Mr. JONKMAN to protest the extravagant giving of the money of the American people to England, when England still owes us more than $5,000,000,-

000 we advanced to her in the last war, and makes absolutely no pretext of an intent to repay anything we may loan or lease or otherwise turn over to her in this conflict.

The committee, likewise, objects to JONKMAN'S "condemnation of Russia" and thinks he and we all should climb right into bed with a Government which, for more than 20 years, has sought to destroy our Government by force, which until she actually was attacked by Hitler, not only was his ally, but was seeking to destroy in America whenever and wherever possible whatever we were undertaking to do in our own defense.

We do not question the "loyalty" of the Committee to Defend America as it questioned Mr. JONKMAN'S "loyalty," but we do question the judgment of the members of the committee who signed the letter, and suggest that perhaps the best way to "defend America" is to defend America rather than to seek to defend the rest of the world which, as usual, will never appreciate any of our efforts.

What Brandeis Means to Us

EXTENSION OF REMARKS
OF
HON. MARTIN J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 8, 1941

EDITORIAL FROM THE NEW YORK DAILY MIRROR

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

[From the New York Daily Mirror of October 8, 1941]

WHAT BRANDEIS MEANS TO US

The late Louis Dembitz Brandeis never changed his mind about certain fundamental beliefs; for instance, in 1905, he defined a conception of democracy that had to be earned and deserved:

"Democracy is only possible—industrial democracy—among people who think * * * and that thinking is not a heaven-born thing. It is a gift which men and women make for themselves. It is earned, and it is earned by effort."

He never changed his mind about that conception of democracy; he was until his death a great liberal—as the word was understood before it was usurped by a new brand of "liberals" who presumed for themselves the sole right to think for all the people.

Mr. Brandeis was a liberal when Wilson nominated him to the Supreme Court—reactionaries all over America howled their wrath at the appointment. But since then every shade of opinion in America reached agreement on one point:

Deep respect for the sincerity, the integrity, and the wisdom of Justice Brandeis.

Justice Brandeis was 81 years old in 1937, when President Roosevelt began his fight to infuse "new young blood" into the Supreme Court. The implication of the President's fierce attack upon the aging personnel that formed this fulcrum of the balance of power between the executive and the legislative branches of government was unfortunate and unwise.

The Supreme Court fight began February 5, 1937. Justice Brandeis retired from the Court 2 years later.

But while he was still on the high bench, he joined with Chief Justice Hughes in phrasing a letter to a congressional committee, opposing the President's Court-packing plan.

Of the 16 major New Deal laws that came before the Court while Mr. Brandeis was a Justice, he opposed the administration 6 times.

Significantly, he voted with a unanimous Court in declaring the N. R. A. unconstitutional; and again in the unanimous decision that President Roosevelt committed an illegal act in the dismissal of William E. Humphrey from the Federal Trade Commission.

And yet, in neither of those cases did any fair-minded American think of Justice Brandeis in the terms that President Roosevelt used with qualification in his magazine article about the Court fight a few weeks ago:

"A dead hand was being laid upon the whole program of progress—to stay it all. It was the hand of the Supreme Court of the United States."

The President, at a time when his recurring plea is for national unity, revives once more a fight that split America; and there is still smoldering bitterness as he looks back and thinks of the Court as "a dead hand."

We look upon the Supreme Court and its place and function in our representative form of government with its three-way system of checks and counterbalances, in terms of the career of Justice Brandeis.

We admit that "practical" politicians are probably correct when they say that no Jew, no Catholic could ever be elected President of the United States of America.

But the Supreme Court as well as the Congress has succeeded in rising up through the welter of stubborn prejudice to a plane that permits and invites both Jews and Catholics to render service to their country, in proportion to their love of their country and their ability to serve it.

The Supreme Court of America is a citadel inside which true liberals like Louis Dembitz Brandeis can serve as a last refuge for every minority group, every minority opinion.

The priceless essence of democracy, our kind of democracy, is the protected and guaranteed right of dissent.

The career of Justice Brandeis, the "great dissenter," strengthened that citadel of democracy during its time of greatest peril.

When America has time again for reflection, we will feel the gratitude we owe this man.

Mr. Ickes and Mr. Pelley and the Solution of the Oil Shortage

EXTENSION OF REMARKS
OF
HON. JOSEPH J. MANSFIELD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 8, 1941

LETTERS WRITTEN BY HON. JOSEPH J. MANSFIELD, OF TEXAS, TO HON. HAROLD L. ICKES AND J. J. PELLEY

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks there is quoted below letters that I have written to Mr. Ickes and Mr. Pelley:

OCTOBER 2, 1941.

Hon. HAROLD L. ICKES,
Administrator, Oil Administration,
Department of Interior,
Washington, D. C.

DEAR MR. ICKES: I have been reading in the newspapers with a great deal of interest what you and Mr. Pelley have been saying about the oil and gasoline situation in the East.

In order to remedy conditions and, at the same time, avoid the large expenditures of money and steel necessary for a long pipe line half way across the Continent, you could connect the Gulf Coast Inland Waterway and the Atlantic Coast Inland Waterway with a pipe line from the vicinity of Fort St. Joe, Fla., to Jacksonville, Fla.

I am informed that the Southeastern Pipe Line Co. at Atlanta, Ga., estimates that the above-mentioned pipe line could be constructed in from 30 to 90 days, would be 235 miles long, would require 50,000 tons of steel, and would cost about $12,000,000. With such a pipe line an additional 200,000 barrels of oil or gasoline per day could be moved from the Gulf Coast to the Atlantic seaboard over the intracoastal waterways. We will never be able to handle the tonnages required for our defense program until we make full use of our waterways which have been planned and executed to meet such demands as we now have.

Yours sincerely,

J. J. MANSFIELD,
Chairman.

OCTOBER 2, 1941.

Mr. J. J. PELLEY,
President, Association of American
Railroads, Washington, D. C.

DEAR MR. PELLEY: I have been reading in the newspapers with a great deal of interest what you have been saying about railroad tank cars being available for the relief of the oil and gasoline shortages along the Atlantic seaboard, and I see in the papers this morning that there are not available as many tank cars as there was thought to be in the first place.

You could solve your dilemma by hauling oil and gasoline only across Florida. In this way it could be transported by barge from the Gulf coast to Port St. Joe, Fla. From this point the tank-car service could move via the Apalachicola Northern Railroad to River Junction, Fla., or to Climax, Ga., and from River Junction to Jacksonville via the Seaboard Air Line, or from Climax to Jacksonville via the Atlantic Coast Line. One of these routes is 317 miles long and the other is 317 miles long. With some additional terminal facilities (costing about $2,700,000) an additional 200,000 barrels per day could be transported via this combination rail-and-water route from the Gulf coast to the Atlantic seaboard. Obviously, a much smaller number of tank cars would be required to move oil about 300 miles than would be required to move the oil halfway across the continent.

Yours sincerely,

J. J. MANSFIELD,
Chairman.

Ernest W. Marland

EXTENSION OF REMARKS
OF
HON. WESLEY E. DISNEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 8, 1941

EDITORIAL FROM THE TULSA (OKLA.) WORLD

Mr. DISNEY. Mr. Speaker, for more than a quarter of a century the name of Ernest Marland has been a household word in Oklahoma and the Southwest.

He was beloved by his intimates to the point of adulation. His personal charm bound his friends closely to him. His was a conceiving, constructive mind. The size or formidability of any objective did not deter him. He lightly pushed aside all obstacles.

His whole career was a paradox of success and failure—as we gage the world's standards. But mankind is the better for Ernest Marland's having lived.

He hit the high and the low of finance and politics. Once fabulously rich, he died without means. At one time a meteoric success in political affairs, he left the office of Governor a disappointed man. His political force was dissipated.

His philanthropies were as forthright as his financial and political methods. Marland's every step blazed some kind of a trail of good deeds done, kindnesses shown, and of aid to the needy.

But he probably said to himself as the final day came, that all this, too, has been vanity and vexation of spirit.

The Tulsa World has written a beautiful editorial about this man, about Marland, which is eminently worthy of permanent place in the records of the Congress in which Ernest Whitworth Marland served so well and faithfully.

The editorial follows:

[From the Tulsa (Okla.) World]

MARLAND'S EXCEPTIONAL CAREER

Into a life of moderate length, Ernest W. Marland crowded accomplishments and experiences seldom equaled in variety and number. The familiar term "colorful" applied to him, but his career cannot be adequately described by any one phrase or ordinary statement. He illustrated, to a high degree, the possibilities of this new southwestern country. He was a many-sided man, and we know of no career substantially paralleling his.

Mr. Marland had a monumental record of successes and failures. He came to Oklahoma somewhat before statehood and in the early days of the oil business; he attained almost fabulous wealth and then suffered a financial debacle. From lawyer and lease man, without means, he moved on to the headship of a great corporation with holdings and operations scattered over two countries. Meanwhile, two other notable phases of his life developed. He became a philanthropist and a politician. In all three of his major fields he was fast moving and spectacular. In a period of about 40 years he touched extremes many a time.

The vivid accomplishments and failures of E. W. Marland have already passed into the swift history of Oklahoma. As an oil man he was daring, and even original. As a philanthropist, he dispensed money with a touch of profligacy. As a politician, he suddenly achieved sensational election to Congress, then passed on to the Governorship. Neither in politics nor oil did he make an impressive come-back.

Some of the characteristics of Mr. Marland in philanthropy were taken into the governorship. He had large and liberal ideas, and his administration was a costly one. He had a passion for helping people, and it was nothing new when he went to Oklahoma City. He had plans for benefiting the public on a large scale, and his field was increased from Ponca City to the whole State.

At the height of his prosperity Mr. Marland planned and built one of the great estates of the country, almost certainly the finest and most impressive in the Southwest. While building for himself he built many homes for his officials and for relatives, and he contributed very decidedly to the upbuilding of Ponca City. His benefactions always had an artistic side; it was understood in his home town that he would not finance any project which left out artistic values. He put money into a great many things.

Mr. Marland became nationally and even internationally known through his sponsorship of the statue of the Pioneer Woman. That monument and the remarkably fine estates he developed are still outstanding.

A vivid, colorful career, in which the practical and the idealistic, the brilliant and the commonplace, failure and success and surprise were thoroughly mixed, came to a close Friday with the death of Ernest Whitworth Marland.

Foreign Relations and National Defense

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 8, 1941

RESOLUTION OF THE IOWA STATE GRANGE

Mr. LECOMPTE. Mr. Speaker, at the seventy-second annual session of the Iowa State Grange, held in Newton, Iowa, September 30, October 1 and 2, 1941, the report of the resolutions committee on foreign relations and national defense was adopted. Herewith I insert the resolution in full:

The whole world is passing through trying times. We need calmness and clear thinking by the people, true statesmanship by our representatives, and, above all, we must have national unity if this Government of ours is to survive the crisis.

The Grange, through the 75 years of its history, has always been thoughtful and conservative in State and National affairs.

We offer this as a statement of our policy, and move that copies of it be mailed to the President and also the two Senators and the nine Representatives from Iowa.

Agriculture has always pledged its unqualified support to national defense, and we now demand that industry and labor unselfishly do likewise, without thought of excessive profit.

We believe that maintenance of our democratic form of government is vital to our future and that democracy is worth defending here in the Western Hemisphere. We believe the neutrality law was wisely drawn in calm deliberation, and neutrality, together with hemisphere defense, will save our democracy and preserve our way of life. However, if this policy does not bring us honorable peace and national security, then Congress should exercise the power it now has and take such action as they deem necessary.

We believe that the results of inflation could be somewhat modified if a greater part of defense costs were met on a pay-as-you-go basis.

We condemn all labor groups and industries which seek excessive profit or advantage by tying up defense industries. We must all remember that especially in this time of emergency we are citizens of a great Republic first of all, and only secondly are we farmers or laborers, clerks or housewives. National unity is our first line of defense. Without it all other efforts are futile.

We, the Iowa State Grange, pledge our full support during this emergency to the President and the Congress of the United States.

C. P. KAISAND.
C. B. KLAUS.
MORRIS TRUSLER.
WALTER GOREHAM.
Mrs. L. M. RYAN.
Mrs. E. DURREY.

The American Bar and the Emergency

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 7, 1941

ADDRESS OF CHARLES W. BRIGGS, OF ST. PAUL, MINN.

Mr. KNUTSON. Mr. Speaker, under permission graciously granted me by the House to extend my remarks, I desire to have incorporated a timely address delivered by Mr. Charles W. Briggs, of St. Paul, Minn., one of the leading attorneys of the Northwest, before the American Bar Association at its Indianapolis meeting on September 30, 1941. What Mr. Briggs had to say upon that occasion should be read by every Member of Congress as he is a student of economics and political philosophy as well as of jurisprudence. I consider that Mr. Briggs made a real contribution to American thought upon that occasion.

The address follows:

WHAT SHOULD A STATE OR LOCAL BAR ASSOCIATION CONCERN ITSELF WITH DURING THE CURRENT EMERGENCY?

I appreciate the honor that comes from Mr. Thompson's invitation to speak before this important section of the American Bar Association. The work of this section has been received with country-wide enthusiasm. Last spring there was a regional meeting in Minneapolis. The program, including an address by Judge Parker, was of a high order of excellence. This section, under Mr. Thompson's able leadership, is trying to bring to members of the bar something of benefit and inspiration to them in their professional capacities. Lawyers like myself are the capillaries of the blood-system of the bar. If bar associations do not nourish them and cause them to function, the system withers, and the associations die. Mr. Thompson's ultimate goal, of course, is to emphasize through bar associations, the increasing necessity that lawyers discharge their duties to the public.

Mr. John Q. Public is applying as never before a methodical system of measuring lawyers. He is doing it in Forest City, Iowa, in St. Paul, in New York City, and everywhere. He is asking the lawyers: "What is going on in the realm of law and in the sphere of government, and what do you propose shall be done about it?" He is saying to the lawyers: "What is your business in this life of ours?"

We will have to define the word "emergency" for our present purposes. We have had a lot of emergencies, and much has been done in their name. Some have been generated by spontaneous combustion, and others have been declared. I suppose there is one emergency that has never been declared:

"The difficulty of a lawyer's contact with a dollar, and the further difficulty of maintaining contact once he makes it!"

I think the emergency with which we are concerned here is the vast upheaval of the foundations and conditions of human society. Such upheavals, like volcanic eruptions, are not new. From the present eruption we see pouring out the same sort of lava, the same sort of fire and smoke and ashes, that have appalled and confounded men in generations past and gone. Social and economic tremors are again shaking and shattering the governments of the earth. With ever-increasing severity the shocks are being felt in America. And it all comes down to this: Shall a man continue to be free to work and keep his horse and his cow or any other investment he may have, if he acquires one?

The job of bar associations is to help the people evaluate the disturbances, and find an answer that is compatible with sound and lasting public welfare. Our job is not to stand in awe or put to sea for personal safety. We must, I think, realize that this emergency was not created by the present war. We had this emergency before the war. The importance of the bar associations' job is not minimized or postponed by the war. For the ranks of the lawyers who are militant in the battle of human rights—and I include therein property rights—there is no such thing as a 1-year enlistment. Lawyers are in for the duration, which is for their natural lives. No matter when the military conflict ends, and no matter where victory may rest, the lawyers' battle will go on, into the conflict of peace. Our job is to help the people decide whether the past and present socialistic tendencies in this country, accelerated by the demands of war, shall be fastened upon this country as a permanent policy of peace. There are now existing or contemplated far-reaching controls over business and the lives of the people. These contain more than a suggestion that the objective is not national defense but complete socialization of industry.

Never before have bar associations been faced with such grave responsibilities. Their members will, indeed, serve their country in war if need be, but their duties run far deeper than this. Their duties go back to where the problems of the administration of justice and government begin; they have to do with what should be the rights of men in organized society. Perhaps we have complacently thought that these problems had almost been solved, but again they confront the world for solution. Again people are bewildered, and they are no more positive about the ultimate good to the public in these matters than were wise men of centuries and centuries ago. The whole fabric of human affairs, like a jigsaw puzzle, is being torn asunder into its jagged pieces, and these pieces are again thrown at our feet. Shall we use the old pattern or shall we devise another one? I shall not say a new one. Again we are confronted with the age-old questions: "What is justice and how can it be best achieved in an organized society; what should be the rights of individuals under a government?"

What should a bar association do in this emergency?

At least its members should familiarize themselves with the current of legal situations, with the changing social, economic, and governmental ideologies, and be prepared to give the public their best judgment. The bar association should constitute itself a general staff, which makes an estimate of the situation and then reports to the commander, the sovereign people, what, in its opinion, should be the decision and the plan of action. The people will make some decision, and it should not be made in default of the lawyers' profound consideration. At the very least, a bar association, by every means at its command, should stimulate the study of government and the fruits thereof.

* * * * *

My principal thesis today is that bar associations in the present emergency should specialize in the study of government.

Lawyers in the colonial days, during the period of the founding of this Nation, and well into the years after the Civil War, were leaders in the study and appraisal of government. They were the mentors of the people in this respect. Lawyers not only fathered this Government but they delivered it, and they watched over its adolescence. Not only the leaders of the bar did this, but the rank and file did it. They all contributed to the debate. They all contributed to the comparison of one form of human society with another. They made an exhaustive analysis of the ways men have tried to get along together for the best of all concerned. And they did not hesitate to make known to the public their judgment as to what theory and framework of society were best for the happiness and welfare of mankind, and for the reasonable protection of one citizen against another. They went deeply into the experiences of the past, into ancient and modern methods of exercising sovereignty, and they led the people in arriving at a solution.

Perhaps during the period of great industrial development in this country, lawyers, being otherwise occupied, have taken our scheme of government too much for granted, and have permitted a great deal of dust to accumulate on the experience of the ages. Now the whole subject of government is up for reexamination. Lawyers are grounded in the ethics and philosophy of government. They understand the relation of sociology and economics to government and law. Bar associations must give the benefit of their wisdom to the people. If they do not, they sterilize their abilities, to the great loss of the public which it is their privilege and bounden duty to serve.

Lawyers have naturally been engrossed in the material aspects of life. They serve their clients' immediate needs. Perhaps they have lost sight of matters of greater magnitude and of more fundamental concern for the long pull. Perhaps lawyers have lost sight of the conflicts in society outside of the law reports—conflicts that must be reconciled if our present system is to endure. We lawyers draw our deeds and mortgages, trusts and wills and contracts; we organize corporations; and we probate estates. We serve our clients whose interests derive from the Government that has recognized the institution of private property and the capitalistic system. Perhaps we have become oblivious of the flood that threatens to engulf this system. I have seen farmers along the Mississippi River toiling with their crops, and refusing to believe that the river would again rise to wipe out their efforts. I wonder if lawyers should continue to labor in the field of private rights, and ignore the rising current of collectivism that threatens to engulf the field and leave them in the treetops and on a few isolated high spots, there to speculate upon the dubiousness of a rescue until after another leveling onset has spent its fury?

History is a great storehouse of experience. If only bar associations could induce the people to look into the pages of history, they would go far to justify their existence. I think that the founders of this Government of ours would say—and we may say—that the presently exalted schemes for bossing people are simply variants of what has been tried out before. Spectrum analysis in the laboratory of government will reveal that all of the "isms" and "ocracies" of today throw the same bands of color that students have detected through the ages. After all, there are only three forms of government—government by one man, government by a minority, and government by a majority. There is nothing fundamentally new in practice about dictatorships or national socialism. New dealism may indicate nothing but a degree of change to an authoritarian state.

From a practical standpoint, great minds have been in all ages of which we have any record, wrestling with the problem of human welfare, the relation of the individual to the state, and the extent and justification of the exercise of power over the lives of human beings. If we put the ideas and methods of ancient kings, of the great figures of Greece and Rome, of the great Khans, of Chinese dynasties, of the kings of divine right, of the leaders of the French Revolution, into the hopper, we will find that there is not much new under the sun. The great philosophers of all ages have studied this business of regimentation and human liberty. Lawyers must study it now.

And I think we should acknowledge that mere change in and of itself carries no virtue or advantage. The human race has been rotating its crops of government and social systems since the dawn of history. The Greek philosophers, long before the Christian Era, were familiar with the cycle of democracy, anarchy, aristocracy, dictatorship, monarchy, and so on.

Our ancestors thought they had found a crop that would produce the most fruit for mankind—a representative or republican form of government, with a constitutional base; a government created with checks and balances that would serve to retard revolution while the people could dispassionately deliberate upon the course to be taken. They thought they had set up a scheme accommodated to the fundamental traits of human nature.

But we have come to think and talk in terms of democracy. No matter what the pill is, it is put in the capsule of democracy. We talk of immediate response to the wants of the people. We conjure with this word democracy and find difficulty with its meaning. In final analysis democracy means a state where the people have and exercise the right and power to choose their own rulers. But that conception is too refined, and falls short of describing the things that democracy has meant to the people of this country.

There have been associated with democracy in America certain vital things. In addition to free election of the rulers of the people, democracy has meant freedom of speech, of the press, of assembly, of religion, the right to a fair and impartial trial, freedom of opportunity, and freedom in the ownership and enjoyment of property that satisfies to a reasonable degree the acquisitive faculty of human beings.

Now, what are we doing with these things? We have been and are now putting them in jeopardy. A few weeks ago I was startled to hear a professor of one of our large universities passionately arguing that the time had come when freedom of speech and of assembly should be suppressed in this country.

I think lawyers can see the trend. It is so unmistakable that no thinking man or woman should overlook it. One look at the social and political barometer will show it. The fact is we are dangerously near considering democracy in terms of equal distribution of property and the fruits of toil. If we focus upon such a concept, we will soon become oblivious of all the things we have associated with democracy. If equal distribution of property and equal sharing of the fruits of business and employment is our goal, then it will take autocratic power to attain and hold that goal. No government that violates the inherent instincts of people can exist without autocratic power. Collectivism generates such power and grows upon what it generates. You may create a collectivism with a government agent sitting in judgment upon every aspect of life, and call it democracy, but Hitler and Mussolini will call the hand better than that.

In the present emergency the lawyers must be prepared to answer the question: Is socialism, manned by an inevitable dictatorial government, the solution that will accomplish the highest degree of public welfare? That is the question with the bark off. And that suggests another question: Are we going to fasten upon ourselves a system that seems to satisfy the material needs and selfish purposes of the moment, in disregard of the ultimate havoc that may result to capital and labor alike?

Socialism is the negation of private property and capitalism.

Mr. Justice Butler, at a banquet in St. Paul just before he took his seat on the Supreme Court, said: "The issue before the American people is the preservation of the institution of private property." That was a prophetic statement, and it was made in 1923. That issue is now being fought out. We may as well admit that the right of private ownership of property is being challenged today. We are again in the struggle of the "have-nots" against the "haves," which is as old as the hills. In this country we are well on the way toward depriving owners of the incidents of private ownership. Once these incidents are taken away, the existence of private property becomes a delusion. The bare legal title to property means nothing. If property produces no earnings that the owner may keep, it is valueless, and capitalism is at an end.

This is no idle alarm. We see the ever-rising current of income and ad valorem taxes, estate taxes, and other countless exactions—many of them for the avowed purpose of destroying estates and otherwise regimenting our lives. We see these superimposed upon the river of government, State, and municipal debt, with the flood of inflation and money tinkering in the offing. These constitute the core of the leveling and equalizing process now going on that forbodes destruction of the capitalistic system and opens the way for production for use and service. Every businessman and laboring man is anxiously awaiting the answer to the question: "What does all of this mean?" The lawyers of this country can accept the role that was accepted by lawyers of the formative period of this Government. They can help point the way before a relentless march, step by step, on one path, destroys all possibility of a choice of direction.

* * * * *

Bar associations should discuss government and social systems and analyze them for the people without camouflage. The things that are masqueraded in the name of democracy should be uncovered in the cold light of truth. Any attempt to put totalitarian practices in democratic dress should invite candid explanation. Is there to be recognized no distinction between the powers of our Government when at war, and when at peace? Are we to live in a perpetual emergency? Or does it make any difference whether we do or not?

People should be told that it is idle to think that the present war will preserve democracy or any other form of government. This war may determine whether the people of this Nation are to maintain their power to choose their own form of government. Nothing more. Freedom from foreign aggression does not mean that freedom will remain within our borders. National integrity is the only thing at issue in this war. What the form of our Government and society shall be will remain for the people to choose, regardless of the outcome of this war.

The people should be told that the Constitution is no longer the ark of their covenant. The Constitution has become a highly elastic thing, by broad interpretation. Our Constitution has become, in effect, little more than an unwritten constitution like that of England. In Minneapolis, years ago, Lord Birkenhead said: "In times of great stress your Constitution will mean no more than ours." I did not believe him then, but I am inclined to do so now. We are approaching parliamentary supremacy. The efficacy of constitutional limitations is gone. It has been judicially said that the people, through their representatives, are responsible for molding the form and directing the practical course that our Government shall take. The limits of experimentation in government are as broad as the demands of a majority of the people. Responsibility for government rests upon the people, and it has been said that "what the people want they ultimately get." The people should be told that the practical effects of the exercise of governmental power are the same, whether that power exists under a constitution or otherwise, and that they have the power to say what these practical effects shall be.

The test of a government is what is done under it. The people of this country, consciously or unconsciously, will decide the great issue of private property—the issue of capitalism against collectivism, the issue of regimentation against freedom of enterprise. The distance we shall travel on the road of socialization will be for the people to measure.

The people should be told that continued existence of a dual system of goverment in this country is being imperiled; that local autonomy has been whittled away by methods indirect as well as direct. The sovereign powers of the States are being taken away. Self-government is being forgotten. Their attention should be called to the danger of monopolization of forms of indirect taxation in this country by the Federal Government, which would deprive the States of necessary means of raising revenue. This will mean taxation of capital assets to the point of eventual confiscation, and will drive the States to further surrender of their sovereignty to the Federal Government or to acceptance of socialization.

A Giant Goes to Work—Grand Coulee Dam, the Eighth Wonder of the World

---

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 8, 1941

Mr. LEAVY. Mr. Speaker, the first of 18 of the world's greatest generating units went on the line last Saturday at Grand Coulee and began pouring energy the equivalent of 150,000 horses into the production of aluminum and other badly needed war essentials.

I am naturally gratified, and, while to some of my colleagues I may appear to show an undue enthusiasm, yet those who have seen this mighty structure located in the eastern district of Washington, all agree that its magnitude and possibilities can be only partially appreciated when seen, and that language is totally inadequate to describe it.

The Spokane Daily Chronicle, of Spokane, Wash., of October 3, has an editorial under the caption, "A memorable day in power annals," which, though brief, is quite descriptive of what it means to the Nation to have this power available.

The editorial follows:

[From the Spokane (Wash.) Daily Chronicle of October 3, 1941]

A MEMORABLE DAY IN POWER ANNALS

The greatest hydroelectric generator of all time—150,000 horsepower—tomorrow afternoon joins the world power race.

The mammoth machine will start spinning at Grand Coulee Dam Saturday, the first of 18 generators to enter production. Water falling 310 feet at the rate of 141 tons a second will strike the blades of the great turbine when the word is given by the Bonneville power administration.

This machine alone can produce power enough for an industrial city of 200,000. In the next few months 2 more will join the production line and when all 18 are in service they will produce more power than all that was produced by the public utility power plants in the United States in 1905.

Saturday's ceremonies mark one of the great milestones in industrial history and, because of the importance of power in the world armament race, the event rates as one of the mighty steps in national defense.

In the same issue of the Spokane Daily Chronicle, under the news item entitled "Electric Output Goes Up at Dam," is furnished some statistical facts of this stupendous giant that is rapidly coming into use far ahead of the original schedule.

Today we have in the deficiency appropriation bill before us an item of $6,000,000 to further speed construction and bring into use the much needed electrical energy to insure the success of our determined emergency-defense program.

The news item follows:

[From the Spokane (Wash.) Daily Chronicle of October 3, 1941]

ELECTRIC OUTPUT GOES UP AT DAM

COULEE DAM, October 3.—Grand Coulee Dam has added more than 100,000 kilowatts of electrical energy to the national-defense power pool.

Power from the first of the 108,000-kilowatt generators, which will be placed in service formally at 5:30 p. m. Saturday, has been sending power on a test basis to the Bonneville-Grand Coulee power authority lines since Tuesday.

The dam has been serving the Bonneville lines for several months from its two 10,000-kilovolt-ampere station service units.

The big generator, first of 18 which eventually will be installed in Grand Coulee's powerhouses, has been tested and checked steadily since last summer and has been in the making for 3 years. It is the first of 3 to be installed in the next few months, and will produce more power by one-third than any other generator ever turned on.

ITS SIZE IS VAST

A 150,000-horsepower turbine will spin the 825-ton generator rotor. Turning the water wheel of the turbine for 1 generator alone will require 140 tons of water a second, enough for every person in the United States to take a bath every day.

Other figures regarding the electric giants at the Coulee include:

The generator installation from the bottom of the water wheel to the top of the generator is as high as an 18-story building.

The generator housing is 45 feet across and the main shaft is 42 inches thick. Turbine and generator weigh 2,000 tons.

One generator would light 1,500,000 60-watt lamps, or enough for Chicago. The full installation would light New York and Chicago both, supply all power needs, and still have some left over.

The generator will start turning 8 years after work was started on Grand Coulee Dam and 2½ years ahead of the original schedule.

National Reclamation Association

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 8, 1941

PROGRAM OF ANNUAL CONVENTION

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks, I insert a memorandum containing the program of the tenth annual convention of the National Reclamation Association at Phoenix, Ariz., October 15–17.

From the Canadian border to the Rio Grande, from the Great Plains to the Pacific, the proceedings of this convention will be watched with interest. On the united effort it puts forth will depend the future of irrigation in 17 Western States represented at its council table.

Attention has been centered to some extent in recent years on power for national defense as a major objective of reclamation, but we must not lose sight of the fact that food for defense is as important for the safety of this Nation as power to turn the wheels of industry. There is only one way that we can insure adequate food supplies for this country, come drought or floods, and that is through maintenance of the irrigation program that the National Reclamation Association is sponsoring.

The memorandum follows:

MEMORANDUM FOR THE PRESS—FOR IMMEDIATE RELEASE

The future of the billion-dollar Federal reclamation program affecting 17 Western States will be the center of discussion at the tenth annual convention of the National Reclamation Association at Phoenix, Ariz., October 15–17, Secretary-Manager F. O. Hagie, of the association, announced today.

Heading a delegation of speakers from the Department of the Interior whose Bureau of Reclamation is the mainspring of the program, will be Under Secretary John J. Dempsey, Reclamation Commissioner John C. Page, and Acting Director Abe Fortas, of the Power Division. The place of irrigation and particularly power developments like those at Boulder Dam and Grand Coulee in the national-defense effort will have an important place on the program of the convention. The importance of the irrigation developments for food supplies and employment will be stressed.

Senator CARL HAYDEN, of Arizona, chairman of the Interior Department subcommittee of the Senate Appropriations Committee, will be the principal speaker at the annual banquet concluding the sessions of the convention. Other speakers include Acting Chief Forester Earl H. Clapp, of the United States Forest Service, Milton S. Eisenhower, coordinator, land-use program, United States Department of Agriculture, and many other men prominent in Federal and State activities.

Gov. Sidney P. Osborn, of Arizona, will welcome the convention to Phoenix, and Dr. Alfred Atkinson, president, University of Arizona, will be toastmaster at the banquet.

The program in full is as follows:

WEDNESDAY, OCTOBER 15

9 a. m. to 1 p. m.: Registration of delegates, Hotel Westward Ho. (NOTE.—A registration desk will be open from 7 p. m. to 11 p. m. Tuesday evening, October 14, at the Westward Ho for the convenience of those who wish to register at that time.)

10 a. m. to 12: State caucuses, with the following order of business: Elect member of legislative committee; elect member of resolutions committee; elect director; discuss reclamation problems and policies of the State, including budget and State quota.

WEDNESDAY AFTERNOON

Fiesta room, Hotel Westward Ho

1:30 p. m.: First convention session, president, O. S. Warden presiding.

1:35 p. m.: Invocation, Dr. R. N. Merrill, First Methodist Church, Phoenix, Ariz.

1:40 p. m.: What about Phoenix, Dr. Reed Shupe, mayor of Phoenix.

1:50 p. m.: What about Arizona, Hon. Sidney P. Osborn, Governor of Arizona, Phoenix, Ariz.

2 p. m.: President's address, O. S. Warden, publisher, Great Falls Tribune, Great Falls, Mont.

2:30 p. m.: Treasurer's report, J. A. Ford, manager, Spokane Chamber of Commerce, Spokane, Wash.

2:40 p. m.: Secretary-manager's report, F. O. Hagie, secretary-manager, National Reclamation Association, Washington, D. C.

3:10 p. m.: Honoring George H. Maxwell, executive director of the National Reclamation Association, which was organized as the National Irrigation Association on June 2, 1899, father of the Reclamation Act of 1902.

3:20 p. m.: Reports on State caucuses, by director from each State (5 minutes each).

4:30 p. m.: Announcements and adjournment.

WEDNESDAY EVENING

6:30 p. m.: Dinner meeting of directors' advisory committee, Continental Room, Westward Ho, President Warden presiding. Advisory committee composed of director, member of legislative committee, member of resolutions committee from each State, and two others from each State chosen by the director.

7:30 p. m.: Water users' forum, Fiesta Room, Hotel Westward Ho. Raymond A. Hill, consulting engineer, Los Angeles, presiding. An informal discussion of the problems of the water users. Program chairman, Lin B. Orme, president, Salt River Valley Water Users' Association, Phoenix, Ariz.

THURSDAY, OCTOBER 16

Fiesta Room, Hotel Westward Ho, President O. S. Warden, presiding

9:45 a. m.: Western development, John J. Dempsey, Under Secretary, Department of the Interior, Washington, D. C.

10:05 a. m.: Relation of power to reclamation, Abe Fortas, Acting Director, Division of Power, Department of the Interior, Washington, D. C.

10:25 a. m.: Answers to questions from the floor.

10:35 a. m.: Today's reclamation program, John C. Page, Commissioner, Bureau of Reclamation, Washington, D. C.

11:05 a. m.: John C. Page Question Box. During this hour Commissioner Page will answer questions submitted in writing not later than 7 p. m., Wednesday, October 15. If time permits, he will also answer questions from the floor.

11:50 a. m.: Official convention photograph, in the Patio, Hotel Westward Ho.

12:15 p. m.: Luncheon, Patio, Hotel Westward Ho, auspices of convention committee. Ora Bundy, first vice president, Ogden, Utah, presiding.

12:45 p. m.: Entertainment.

1 p. m.: Interests of the Manufacturer in Reclamation, W. W. Shoemaker, chairman, agricultural committee, National Association of Manufacturers, and vice president, Armour & Co., Chicago, Ill.

1:30 p. m.: Announcements and adjournment.

THURSDAY AFTERNOON

Fiesta Room, Hotel Westward Ho, President O. S. Warden, presiding

2 p. m.: The Problems of Agriculture, Carl H. Wilkin, economic analyst, raw materials national council, Sioux City, Iowa.

2:25 p. m.: The Sugar Picture Today, E. W. Rising, executive vice president, Western Beet Growers Association, Nampa, Idaho.

2:50 p. m.: Wheeler-Case Projects—Their Problems and Progress, Wesley R. Nelson, Chief, Engineering Division, Bureau of Reclamation, Washington, D. C.

3:20 p. m.: Answers by speakers to questions on any of above subjects.

4 p. m.: Tour of Salt River project, ending with dinner at steam plant of C. A. L. & P. Co.

THURSDAY EVENING

7 p. m.: Steak dinner at steam plant, C. A. L. & P. Co., hosts. William R. Wallace, presiding. (a) Informal speeches by visiting Governors, Congressmen, Senators, and distinguished guests. (b) Motion picture, The Lifeblood of the Desert, by Lin Orme, president, Salt River Valley Water Users' Association, Phoenix, Ariz.

FRIDAY, OCTOBER 17

Fiesta Room, Hotel Westward Ho, President O. S. Warden, presiding

9:45 a. m.: Forest Management and Reclamation, W. S. Rosecrans, president, American Forestry Association, Los Angeles, Calif.

10:10 a. m.: Development and Care of the Forests in Our Watersheds, Earl H. Clapp, Acting Chief Forester, United States Forest Service, Washington, D. C.

10:30 a. m.: Evaluation of Priorities in Beneficial Use of Water, Royce J. Tipton, consulting engineer, Denver, Colo.

11 a. m.: New and Pending Water Legislation, Clifford H. Stone, director, Colorado Water Conservation Board, Denver, Colo.

11:30 a. m.: Answers by speakers to questions on any of above subjects. Announcements and adjournment.

12:15 p. m.: Luncheon, Patio, Hotel Westward Ho, auspices of convention committee. J. R. Fauver, director, Exeter, Calif., presiding.

12:45 p. m.: Entertainment.

1 p. m.: A Menacing Long Drought, Halbert P. Gillette, president, Gillette Publishing Co., San Marino, Calif.

1:30 p. m.: Announcements and adjournment.

FRIDAY AFTERNOON

Fiesta Room, Hotel Westward Ho, President O. S. Warden, presiding

2 p. m.: The Settlement of Irrigation Projects, Clifford Kaynor, publisher, Ellensburg Daily Record, Ellensburg, Wash.

2:25 p. m.: Changing Attitudes in Agriculture, Milton S. Eisenhower, coordinator, land-use program, United States Department of Agriculture, Washington, D. C.

2:50 p. m.: The National Values of Western Resources, Ralph Bradford, secretary, United States Chamber of Commerce, Washington, D. C.

3:15 p. m.: Business session. Report of auditing committee, report of budget committee, report of legislative committee, report of resolutions committee, selection of next convention city. Announcements and adjournment.

4 p. m.: Meeting of new board of directors.

FRIDAY EVENING

7:30 p. m.: Tenth annual banquet, Patio, Westward Ho Hotel, auspices of Phoenix convention committee (informal). Toastmaster,

Dr. Alfred Atkinson, president, University of Arizona, Tucson.

Entertainment: Floor show, troubadours, dancing.

Messages from friends of reclamation, President O. S. Warden.

Address, Hon. CARL HAYDEN, United States Senator from Arizona.

Fifteen-Fifteen

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 8, 1941

ADDRESS BY DR. ARNAUD C. MARTS, PRESIDENT OF BUCKNELL UNIVERSITY

Mr. SIMPSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of Dr. Arnaud C. Marts, president of Bucknell University, Lewisburg, Pa., at the first chapel session at the opening of the academic year, September 25, 1941.

The address follows:

It has become customary for me to speak at the first chapel session at the opening of the academic year in order to try as your leader to give some direction to our common life together on this campus of inspiration. I shall speak, therefore, briefly this morning about the responsibilities which this Bucknell community of 1,300 students and 150 teachers and administration have in this fateful fall of 1941 in our mutual endeavor to aid each other, to serve humanity, and to aid the slow and painful advance of civilized living on this earth.

I shall take as my starting point a question asked of me last spring by a senior in our mechanical engineering department.

Each May our mechanical engineering seniors spend an hour with me in a question-and-answer period. A week before the conference they send me a written list of questions related to problems that are troubling them, and thus I have some time to think about my answers. There is only one subject which is barred—by mutual recognition of the fact that I know less than they do about it—mechanical engineering. Otherwise, no range of questions is barred—not even advice to the lovelorn.

Last May one of many interesting questions presented to me was this: "Why is it that in time of war there occurs an increase of religious interest and at the same time a let-down of moral standards?"

This was an excellent question—one which on the surface seems to reveal a paradox, an inconsistency or insincerity in human nature. But under the surface, when one gives it deeper reflection, it provides an insight into human behavior which can illuminate our course of action at this time of crisis.

The answer to this question is very simple, when one gets the key to it. And the simple answer to this question is the answer to some of the basic problems which face modern civilization.

The answer is, of course, that there are three sorts of people; there always have been and there probably always will be.

This is best illustrated by certain experiences which I am having in my council of defense work at Harrisburg. We have 10 departments of our work there and 1 of them has to do with recreation for men in uniform when they are on leave. Experts in this department find that always about 15 percent of the men are interested only in the very best types of recreation. They know exactly how they want to spend their leaves—they want to visit relatives or friends; or they want to go to the theater or a concert; or they want to attend a baseball game or take part in some sport; or they want to go to a dance or other sort of party with a self-respecting girl; or take part in some other wholesome form of recreation. Their standards are established. They seek out the opportunities for fine recreation and it does not matter how many dives or low resorts they encounter, they pass them by instinctively without any temptation to lower their standards of conduct.

But in each camp there is another 15 percent of the men whose tastes in recreation and conduct are exactly the opposite. They are the lads whose instincts are coarse and unrefined. They make a beeline—like a homing bumble bee—straight to the hot spots. The U. S. O. could line their pathway with movies and canteens and reception centers and sports, but those 15 percent would pass them all by on the run, for they don't want wholesome recreation; they want only the booze joints and gambling dives, on a level with their own tastes.

And in between this upper 15 percent of lads in the uniformed forces and the lower 15 percent, the remainder—the great 70 percent—are undecided, mobile, ready to go in the direction of the strongest attraction at the moment. If wholesome recreation is available and companions lead them in that direction, they will go there. Or if they are led toward the hot spots, they will go there.

This cross section of the recreational standards of our men in uniform is a cross section of our whole life. About 15 percent have high ideals and standards of life to which they will be loyal through all kinds of experiences. And 15 percent have low standards and ideals, and are too selfish to want them elevated. And in between, many of the 70 percent will follow the one or the other 15 percent.

You are all familiar with John Oxenham's poem which expresses this same thought in beautiful lines:

A HIGH WAY AND A LOW

"To every man there openeth
A way, and ways, and a way.
And the high soul climbs the high way,
And the low soul gropes the low;

"And in between, on the misty flats,
The rest drift to and fro.
But to every man there openeth
A high way and a low,
And every man decideth
The way his soul shall go."

—*John Oxenham.*

ONE SHIP DRIVES EAST

"One ship drives east and another west,
While the selfsame breezes blow,
'Tis the set of the sail and not the gale
That bids them where to go.

"Like the winds of the air are the ways of fate
As we journey along through life;
'Tis the set of the soul that decides the goal,
And not the storm or the strife."

—*Ella Wheeler Wilcox.*

When you have this cross section in mind then you have the key to the answer to the mechanical engineer's question. The reason that at a time of national excitement there is an increase of religious interest and observance, and at the same time a let-down of moral standards, is that there are these two "15 percents" of our people and they react to the situation in opposite directions.

The top 15 percent come to a sharper realization than they have ever had of their share of responsibility for the sanity and decency of the world, and they undertake, with increased energy, to keep standards of conduct and ideals high at a time of danger and confusion. Thus we have the increase in religious interest.

And at the other end, the 15 percent who live selfishly and vulgarly see the standards are being lowered and they become more aggressive and energetic in their low pursuits and in their endeavors to bring all standards down to their level in order that they may have a larger company.

We are following the pattern now in 1941 that those of us who are old enough to remember can recall so vividly in 1916 and 1917 when as America approached the verge of war in those months, excitement and apprehension began to rise and there was an increase of religious interest and observance by the top 15 percent who endeavored to lead the Nation on the pathway of high purpose and unselfish ideals, and at the same time there was also a vast increase of activity on the part of the lower 15 percent who felt the wave of excitement about to pass over the Nation and who preached the gospel of "eat, drink, and be merry for tomorrow we die."

Never before has our modern world experienced a second great World War so soon after a first great World War. These great periodical conflicts and armed revolutions used to be spaced 50 or 60 or 70 years apart. Consequently the memory of the current active generation did not go back to the experiences of the previous war. But this time the second World War broke out only 21 years after the close of the prior World War. Perhaps this is due to the speed-up of all our modern life, or perhaps it is due to the remarkable phenomenon of an Adolf Hitler's genius who brought the storm of hate and bitterness to a culmination much sooner than any previous revolutionary leader has been able to do.

But whatever the cause or reason for this speed-up, we find ourselves now on the verge of a second world conflict and with a generation of men and women who can remember in every detail the patterns of national life before and during and after the previous World War. Let us hope that our memories will be so faithful that we shall be guided by them to a nobler course of action than this Nation followed in connection with the first World War.

During the days of 1916 and 1917 the lower 15 percent took over the leadership of the social and moral conduct of our Nation; "eat, drink, and be merry for tomorrow we die," was their text in one expression or another, and with that text they led America into an era of unprecedented lowering of ideals and deterioration of moral standards. It was a silk-shirt era of boisterous pleasure and selfish indulgence which left our Republic weaker to this very day. So they ate, they drank, and they were merry, but did not die.

It was not a quick revolution of moral conduct by any means. It came slowly, by letting down a little here and a little there. People began to use Sunday for sport instead of attending church; the night club began to creep out of the underworld into the life of the upper crust; standards of modesty and restraint were lowered bit by bit; drinking, which had been barred from all ordinary social life in America, became first admitted, then expected, and, finally, almost socially compulsory.

From one let-down to another, our Nation went with increasing momentum, each person excusing himself or herself against conscience, with the universal alibi, "Everyone else is doing it."

This cheapening of standards spread to the colleges, of course, and college students of the 1920's became generally regarded as a peculiar breed of noisy, ill-bred young people,

clad in coonskins and resembling fur-bearing animals also in their cultural capacities.

The reputation of the colleges still suffers from that cheap era; Professor Cooper, of Girard, says the movies still regard a college as "a place where students have a small room, lined with banners, to sleep in, and a huge stadium to play in. The professors are all stupid, and the students get most of their education by fooling them. The deans are the most stupid of all, although the president runs a close second. On rare occasions the students attend classes, but they spend most of their time dancing and playing. They are always falling in love, and when the football hero wins the beautiful co-ed the whole college turns out and holds a dance and parade."

This silly and false picture is a hang-over from the 1920's.

Those who knew America prior to 1916, and America since 1916, realize that some of the finest elements of our previous national life have been missing ever since those hectic years when the lower 15 percent grabbed the pennant of the Nation and marched furiously toward the era of selfishness, of greed, of stupidity, and of gambling, which characterized the life of this Nation in the 1920 decade.

There was but one possible culmination to the decade dedicated to these low standards of personal and national life. The downhill decade went its foolish course through bootlegging, racketeering, kidnaping, and gambling, and climaxed in the last quarter of 1929 in a financial collapse which shook the very foundation of this Republic and which soon shook the structure of the whole world.

The 1929 collapse wasn't just a financial collapse. It was something far deeper than that. It was the final failure of the national selfishness which had been initiated back in 1916 when the lower 15 percent persuaded the majority of this Nation to lower their standards and to cast aside their habits and traditions of American honesty, honor, and plain decency for an era of boisterous, selfish, personal pleasure.

Since 1929 all America, indeed, all the world, has been paying the price of our previous folly. During the 1930's sick America nursed the headache of the morning after. At that time America, of all nations in the world, with the greatest mission of any nation in history, should have been strong to deal with the growing danger spots in Europe and Asia. America should have been strong enough to preserve the peace of the world. Instead of being strong for this great service to humanity, America was weak and prostrate, using all our great energy simply to survive and recuperate.

Now we stand where we stood once before in 1916—the world is in flames on each horizon—America is the hope of civilization as we know it. We see ourselves approaching step by step toward that final fateful decision just as we saw ourselves approaching a similar point of decision in 1916 and as we find ourselves in this similar situation, so we observe also the lower 15 percent again taking advantage of the excitement as it arises; once again we hear the same text murmured—this time in different words—instead of "eat, drink, and be merry, for tomorrow we die," the words of the same text today are "It's a crazy world; what's the use; let's have our own gay time." Of course, it isn't a crazy world, it's the crazy people in it. During the past few months I have observed a letting down of standards and a deterioration of ideals exactly similar to the patterns of 1916, and I for one am not willing to see America led again down this same pathway to our national destruction. It's the turn this time of the upper 15 percent, instead of the lower 15 percent, to keep American ideals and standards high through the dangerous crisis that lie before us. Only in this way can we emerge from these experiences, upon which we seem about to enter, strong enough and fine enough to take the leadership of the reconstruction of Christian civilization after this cruel war shall be over.

Here on the Bucknell campus are gathered hundreds of young men and young women who believe in high ideals and high standards, or you would not be here. Here on this campus, in this year of national danger, it is our privilege and our duty to keep our standards high and to dedicate ourselves to the service of a future America infinitely finer and nobler and stronger than the America which emerged from the first World War in 1918.

The world after this war will sorely need a generation of young people with high ideals and with utter devotion to the principles of Christian civilization. There will be fewer young people in the world with those ideals than there were at the close of the first World War, for during the past 10 years the oncoming generations of Germany and of Russia, and of Japan, have been actively inoculated with a zeal for selfish and cruel living. They have been taught by their leaders, whom they trusted, that they must be strong and aggressive and cruel in serving themselves only. The problems of the reconstruction of civilized living will be infinitely more difficult than they were 20 years ago, because of these vast areas where the youth have been deliberately trained to cruel and selfish attitudes.

The youth of America have a challenge and an opportunity which will require your finest intelligence and your finest devotion to the concepts of Christian civilization. Henry Luce, the publisher of Time and Life, recently wrote an editorial in Life in which he said, "The twentieth century is America's age. America must at last take the responsibility of leadership in the reconstruction of our civilization."

America cannot take that leadership and that responsibility if she follows the lower 15 percent, as she did 25 years ago.

The strength of a nation lies not in its material resources only, but in the character and unselfishness and devotion of its people. A Washington columnist says that during the 9 months between the beginning of the war in September 1939 and the fall of France in June 1940 some of the gayest parties since the days of Napoleon III featured the social life of Paris. Parisians entertained as never before; some of them even rented villas and ducal estates from the old French nobility and spent thousands of francs to do them over merely to give one party for 1 night. The lower 15 percent were in the saddle in France and they rode the French Republic into the valley of disaster. They were escapists—while their country was about to die they hid themselves in selfish, noisy pleasure.

Can we learn from our experiences of 25 years ago and from our observation of these other tragedies about us?

It is my hope and prayer for our life together on the Bucknell campus this year that we shall consciously keep the faith in high standards of intellectual effort and moral conduct. We have treasures to preserve here, treasures of mind and spirit and purpose. This is no ordinary place. This is a place of rare privilege and responsibility. This is a colony of the upper 15 percent. I want you, each of you, to be on guard against these influences and persons who are already seeking to spread their gospel of "What's the use—let's go."

I ask this for your sake—each of you—in order that you may discover life's real secret of inner happiness—the feeling that you have been true to the very best that is in you.

I ask it for Bucknell's sake, in order that, regardless of how standards around us may deteriorate, this campus may be kept by you as a repository of civilization's noblest values.

I ask it for America's sake. Once before in my memory I have seen America go through the valley of the shadow of dishonor and human tragedy because at a time similar to the present, just 25 years ago, the upper 15 percent were unable to lead our beloved Republic.

I get letters and phone calls and personal pleas every day in my office at the capitol in Harrisburg asking me what very definite thing they or their organization can do in the defense program. Most of them are hoping to get an assignment with a uniform or a badge or a bit of personal excitement. There are few such assignments as yet, except in two special danger centers in the State. But there is a tragically essential service which every man and woman can now render America in this hour, the hour of the greatest peril our Nation has ever faced.

It is for the private citizen to stand true to high ideals of personal life—to be honest in work and play, to be decent and orderly and law-abiding in every relationship, to be unselfish in every word and deed. An America made up of such individual citizens has nothing to fear.

And no citizen can serve America better at this moment or in the days of trial that lie ahead of us than to make himself or herself such a person.

Let us make this year which we are to share at this place of inspiration an experience which we shall never forget because of its very fineness and its strength of honor and beauty.

If high ideals prevail this time, I believe we can look across the valley of this present world tragedy with the poet to victory for Christian civilization.

"VICTORY

"Ye that have faith to look with fearless eyes
Beyond the tragedy of a world at strife,
And know that out of death and night shall rise
The dawn of ampler life;
Rejoice, whatever anguish rend the heart,
That God has given you the priceless dower
To live in these great times and have your part
In freedom's crowning hour,
That ye may tell your sons who see the light
High in the heavens—their heritage to take—
'I saw the powers of darkness take their flight,
I saw the morning break.'"

—*Owen Seaman.*

Effect of the New River Case

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, October 9, 1941

ADDRESS BY ABRAM P. STAPLES BEFORE NATIONAL ASSOCIATION OF ATTORNEYS GENERAL

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD a very able address delivered before the National Association of Attorneys General at Indianapolis, Ind., September 30, 1941, by the Honorable Abram P. Staples, attorney general of the State of Virginia. At the same meeting, Mr. Staples was

elected president of the National Association of Attorneys General of America. The address of Attorney General Staples deals with a most vital question and, therefore, I desire to have his remarks printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I realize that this is not an appropriate time for the States to agitate or initiate controversies involving any of the rights or powers which conflict with those now asserted by the Federal Government, nor is it my purpose or intention to advocate any such action during the present emergency. The entire Nation is now exerting its supreme efforts to train its armies, to produce airplanes, tanks, guns, and other munitions of war, and to build ships and take other effective steps to convey these supplies, or a large part of them, to other nations to aid them in their valiant and desperate struggle to preserve the freedom of the human race and prevent its enslavement at the hands of ruthless aggressors. It is clear that the successful accomplishment of these worthy aims demands a thoroughly harmonious and united Nation. Certainly, the Attorneys General will do nothing to impede or obstruct these efforts of the Government or to impair the national unity. I hope, therefore, that what I have to say will be considered to be in conformity with this spirit. On the other hand, however, we must be alert to prevent, so far as possible, any further permanent encroachments by the Federal Government in the field of powers and jurisdiction reserved to the States by the Constitution.

The subject upon which I have the honor to address the association is The Effect of the New River Case. This case (*United States v. Appalachian Power Company*) involved the broad question whether the Commonwealth of Virginia had jurisdiction to regulate the generation of electrical energy at a power plant constructed by the Appalachian Co. in the New River at Radford, Va., or whether the Federal Power Commission possessed the paramount regulatory jurisdiction over same. The power dam and plant was being constructed by the power company pursuant to and in conformity with a license granted by Virginia. The object of the suit, instituted in the name of the United States, was to enjoin the construction and operation of the project unless and until a license authorizing same should be obtained from the Federal Power Commission. This Federal Commission had tendered the Appalachian Co. a license provided for by the Federal Water Power Act. This license contained conditions the effect of which was to bring the project within the direct and complete regulatory control of the Commission. The company refused to accept the license.

The main questions on which the decision turned were, first, whether New River at Radford was a navigable water of the United States, and, second, even if navigable, whether the regulatory jurisdiction or power of the Federal Government over such waters extended to matters in no way connected with navigation. Virginia and West Virginia filed briefs as amici in the district court and in the circuit court of appeals. Forty-one States filed briefs in the Supreme Court of the United States, and I, as Attorney General of Virginia, was granted leave to argue the case orally in that court. Both the district court and the circuit court of appeals, after an exhaustive review of the evidence, found as a fact that New River at Radford was not a navigable water of the United States. Both courts also held that, even if it were such a navigable water, the measure of control or regulation sought to be exercised over the project by the license tendered by the Federal Power Commission was not a regulation of interstate commerce, but of the manufacture of electrical energy, and that the regulation of such an activity was solely within the reserved powers of the States. The position taken by all of the 41 States in their briefs in the Supreme Court was that these two decisions of the lower courts should be affirmed.

The Supreme Court, however, reversed the case and held exactly the opposite on both points, in an opinion by Mr. Justice Read, with a dissenting opinion by Mr. Justice Roberts in which Mr. Justice McReynolds concurred. Chief Justice Hughes did not sit in the case.

The effect of the decision on the powers of the States is far reaching, not only because of the Court's conclusions but also of the reasons advanced in their support. It not only broadens the previously existing concept of what constitutes navigable waters of the United States but also enlarges the former generally accepted idea of the extent of Federal powers over such waters. Let us consider, first, how far the decision operates to bring within the control of the Federal Power Commission waters over which the States have heretofore asserted their own exclusive jurisdiction, a jurisdiction which had never been challenged since the foundation of the Government.

The former decisions of the Supreme Court had clearly established that navigable waters of the United States were only those streams which in their natural condition were capable of being commonly used in interstate commerce of a substantial character. New River, a wild mountain stream, clearly did not meet this test of navigability. But a new test was applied, depending, not on the usefulness of the stream in its natural condition but upon whether it is possible, at a cost commensurate with the need, to so improve the stream as to make it navigable in fact. Although holding New River navigable under this test, the opinion does not undertake to measure or compare the cost with the need, or even to point out any need for a waterway for keelboat navigation in this mountainous region with its ample railway and highway facilities. It is, therefore, impossible to formulate from the opinion any test or rule to determine whether there is "a balance between cost and need" in any particular case. In fact, the opinion says: "We do not purport now to lay down any definitive test." The Court further held that it is not necessary "that the improvements should be actually completed or even authorized." They were not authorized in New River.

It is clear, therefore, that the effect of the new test of navigability is to bring about a marked change in the status of many State streams and in the control of the States over them. Many streams formerly considered nonnavigable, when subjected to the new test, will or have become navigable waters of the United States. With respect to others, where the results of an attempt to apply such a test are doubtful, the rights of the States over them rest under a cloud. They may be said to occupy a sort of twilight zone.

The right of control by the State over its streams not actually used for navigation, and which it is certain will never be so used, is a matter of the profoundest importance. Sections 9 and 10 of the Rivers and Harbors Act (33 U. S. C. A., secs. 401, 403) prohibit the building of any bridge, dam, dike, causeway, or pier in any navigable water of the United States "until the consent of Congress shall have been obtained" and "until the plans for the same shall have been submitted to and approved by the Chief of Engineers and by the Secretary of War," and then only in accordance with such approved plans. An exception to this is that the Federal Power Commission may license without congressional consent a hydroelectric dam to be constructed and operated under its supervision.

Let us consider, first, the effect upon the States in relation to their highway bridges or other works of internal improvement, such as fish hatcheries and local flood-control or irrigation projects, and, secondly, the effect upon the development of water power in streams of this type.

The problem of highway bridges will suffice as an illustration of the first-mentioned class of State activities. Before the State may build a bridge over a navigable stream the consent of Congress must be obtained. Experience proves that such consent will not be granted except with the approval of the local Representative in Congress. If he disapproves the kind of bridge or its location, he may prevent congressional consent, thus enabling him to dicate to the highway department the location of the road, which is frequently a highly controversial local matter. But assuming the Congressman is cooperative, there may be delay not only in Congress, which may be in recess, but also in securing the approval of the plans by the Chief of Engineers and the Secretary of War. They may, indeed, require a much more expensive structure than the State desires or feels it is justified in building, as has sometimes happened.

Now, these Federal requirements are no doubt perfectly proper as applied to waters which it may be reasonably contemplated will be utilized as a navigable highway in interstate commerce. But to impose these restrictions on streams where there is no contemplation of such use operates as a tremendous burden and unjustifiable obstruction to the governments of the States in the administration of their internal affairs. The New River case holds: "The point is that navigable waters are subject to national planning and control in the broad regulation of commerce granted the Federal Government." I am afraid we cannot escape the conclusion that as matters now stand the States have been divested in large measure of control, or even use, of practically all their rivers of any substantial size except with the consent of Congress. It may be argued that no effort will be made by the Federal agencies to enforce the prohibitions of the Rivers and Harbors Act as to these streams not heretofore considered navigable, and this may be true. But the State officers violating the act may incur a fine of not less than $500 nor more than $2,500 and imprisonment of 1 year (U. S. C. A., sec. 406). And this penalty applies not only to violation of the act itself, but also to "any rule or regulation made by the Secretary of War in pursuance of the provisions of said sections."

This is not an enviable position for State officers, particularly when there has been no judicial determination of the navigability of a stream in the twilight zone or any assertion of its navigability by Congress or any governmental agency. The State officer must act at his peril or else secure the requisite Federal consent. If the stream is navigable the State cannot lawfully, without such consent, erect any structures therein or make any excavations, or fill-ins, or in any manner alter or modify the channel of the stream. The State cannot even improve it for local navigation, although the stream is not in actual or contemplated use in interstate commerce.

If, as appears to be the case, the effect of the decision is to divest the States of their heretofore believed exclusive sovereign dominion over a great many of their rivers, lakes, and streams, with respect to the building of bridges and other structures therein, and their use for irrigation, local navigation and other internal activities, let us next consider its effect upon the development of hydroelectric power. These streams, being navigable waters of the United States under the new test, become subject to the provisions of the Federal Water Power Act and the regulatory jurisdiction and control of the Federal Power Commission. Neither a riparian owner, nor a municipality, nor even

the State itself, may construct or operate a power project without a license from this Commission.

In addition to the question of navigability, on which the jurisdiction of the Federal Commission turned, another question of far-reaching importance to the States was decided in the New River case. This was whether the regulatory control of the Commission, although within the terms of the Federal Water Power Act, could constitutionally be extended to matters having no relation to the regulation of stream flow or navigation. The Federal Act confers on the Commission authority to regulate, not only the type and plan of structure to be erected by a licensee, but also the entire business of generating electrical energy. As stated in the Court's opinion referring to the license provision: "The criticized provisions summarized above are not essential to or even concerned with navigation, as such." The regulatory provisions summarized in the opinion are too numerous to refer to in detail in a paper of this scope. Many of them are extremely burdensome, so burdensome in fact as to amount to a virtual prohibition of the development of water power by private industry, or by the States either for that matter. One provision, which I deem particularly objectionable to the States, is the so-called recapture of the project by the United States at the expiration of the license period—50 years. The Power Commission is authorized to require the setting aside of amortization reserves to be applied in reduction of the value of the investment for condemnation purposes, with the result that the amount of these reserves may be so adjusted over the license period as to completely amortize the investment and leave no value or equity at its expiration. The United States could thus acquire the property for nothing. This provision is objectionable to the States for two reasons; first, because the setting aside of the amortization charges will necessitate a higher power rate which the public must pay, and, secondly, because the taking over of the property by the Government will destroy an important source of State taxation and revenue, and hinder the States in the use of valuable natural resources heretofore considered as belonging to them. It was believed that the States had the paramount right to condemn such properties.

Prior to the decision in the New River case it had been generally believed to be a principle well established by the Supreme Court decisions that the only jurisdiction which Congress could exercise over navigable waters, in addition to that exercised over fast land, was the protection and regulation of navigation. Hon. Cordell Hull so stated in discussing the water power question in the House of Representatives in 1928. He referred to the power of Congress over navigable streams as a "naked right, with no power given to use the water for any other purpose than navigation." (CONGRESSIONAL RECORD vol. 9, pt. 8, p. 8222.) However, in the New River opinion, the Court distinguishes the cases thought to have established this principle, and holds "recovery of the cost of improvements through utilization of power are likewise part of commerce control." And thus, although the Court, in *Utah Power and Light Company* v. *Pfost*, 286 U. S. 165, expressly held that the generation of electricity is manufacture and not commerce—that commerce only begins after manufacture ends—the Court in the New River case apparently reaches the conclusion that the manufacture of electricity on a navigable stream is interstate commerce, and this even though the energy generated is not sent beyond State lines. It is not believed, however, that the effect of the decision is to classify as interstate commerce every activity in navigable waters. It has never been contended, so far as I know, that the States do not have exclusive jurisdiction over seafood industries in such waters, except insofar as they might obstruct navigation, or that such industries constitute commerce between the States. Virginia and Maryland have always exercised regulatory jurisdiction over them in the Chesapeake Bay and other tidal waters. The States have always regulated fishing by sportsmen in their lakes and streams. But it must be conceded that the effect of the opinion is to give Congress paramount regulatory jurisdiction over hydroelectric projects in navigable waters, and that under the new test of navigability this embraces such projects in practically all of the important streams in the several States.

One other matter of interest is the effect of the opinion upon the question of ownership of the property right in the water power inherent in these streams. In the *Ashwander case* (297 U. S. 288, 330) the Supreme Court said: "The water power, the right to convert it into the electrical energy thus produced, constitute property." Virginia owns the beds of its streams and, therefore, would seem to own the water power flowing over the bed. From early days, in granting patents of land to private individuals, Virginia has reserved the ownership of her streams for the benefit of the people of the State. Does the naked power to regulate commerce among the several States operate to transfer the title to the property right in these streams from the State to the United States? It is hardly conceivable that the commerce clause could be given such a broad effect, nor does the opinion expressly so hold. The Court does say: "Water power development from dams in navigable streams is, from the public's standpoint, a byproduct of the general use of the rivers for commerce," but there is no discussion of the ownership of this byproduct, whether by the people of the State owning the stream or the people of the entire United States. The opinion says further: "The Federal Government has domination over the water power inherent in the flowing stream. It is liable to no one for its use or nonuse. The flow of a navigable stream is in no sense private property." But the Court evidently did not consider as presented to it for decision at this time the question whether the State or Federal Government owns the property right in the water power. This question would arise only if and when the Federal Government actually takes over the plant through condemnation proceedings as provided for by the Federal Water Power Act. Said the Court further: "To predetermine, even in the limited field of water power, the rights of different sovereignties, pregnant with future controversies, is beyond the judicial function. The courts deal with concrete legal issues, presented in actual cases, not abstractions."

It has always been the general thought that the States own their water power. This is borne out by the views expressed by no less a person than President Roosevelt. When Governor of New York, in his messages to the legislature and in other public addresses, time and time again he asserted and reiterated that this source of energy in New York's rivers is the property of the people of that State (public papers and addresses of Franklin D. Roosevelt, vol. 1). So far as I know he has said nothing since to indicate any change of view.

Summarizing, then, by way of conclusion, it may be said that the New River decision has had the effect of broadening the former judicial concept of what constitute navigable waters of the United States, and consequently of bringing within Federal control many important streams and lakes theretofore controlled by the several States; that the status of many other streams and lakes as to navigability is doubtful because of the difficulty of determining when the cost of improvements necessary to render them navigable in fact is commensurate with the need for using them as a common highway in commerce among the States; that the provisions of the Rivers and Harbors Act, when made applicable to so many new waters, constitute a very serious obstruction to the governments of the States in administering their internal affairs; that amendments to said act to clearly define and to some extent restrict the extent of its operation are desirable; that the scope of the Federal regulatory power under the commerce clause has been extended beyond previous decisions of the Supreme Court so as to embrace the generation of electrical energy in a navigable stream; and, finally, that the question of whether the several States own the property right in the water power in such streams, or whether it is owned by the Federal Government is left an open question.

Has Madam Perkins Reformed, or Is This Some More of Her Political Demagogery to Mislead the Public?

REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

Mr. LELAND M. FORD. Mr. Speaker, I am inserting in the RECORD a news item from the Washington Times-Herald, under date of October 8, referring to Secretary Perkins' urge to the American Federation of Labor to clean house, stating that their leaders should be American citizens. The reason I am inserting this in the RECORD is that perhaps, when Madam Perkins is confronted with her own statement, she may forget that she said it, the same as she has forgotten in the past some of her damaging statements and would probably deny that she made them. So in order that this one may not be lost, I am placing it in the RECORD. At some future date, Madam Perkins may wish to deny this statement, particularly after the C. I. O. leaders, who belong to subversive groups that she is now backing, take her to task.

Are not Madam Perkins' statements, as shown here, particularly in view of her past actions, the arch demagogery and the 22-carat hypocrisy of the year? We all know Perkins, and recognize her for what she is and what she does. Certainly, we cannot recognize or know her by her statements, particularly these new statements. If her name were not attached to this item, no one in the United States would ever attribute the statements to her. Is it possible that her own chickens have come home to roost in such great numbers that she now finds her position so hot that it is untenable?

Is it possible that she has at last realized that about 90 percent of all the people in the United States know her now for what she is, and that she is trying to hide behind the skirts of demagogery, to create a new personality, in order that she may continue in her help to the subversive interests in the C. I. O.? If

Madam Perkins does realize how wrong she has been, how she has disgraced her office, she should immediately resign, because her record of administration has been so terrible she can never be reinstated in the confidence of the American people.

You will note she calls on the American Federation of Labor to drive out racketeering influences, and to elect trustworthy officers, and furnish full details of union finances. Why does she pick out the American Federation of Labor, who, after all, is certainly no friend of hers, and, when compared to the C. I. O., stands so high above the C. I. O. as a constructive union that it is not equitable even to make a comparison? Have you ever heard Perkins ask the C. I. O. to throw out its Communists, its racketeers, its Socialists, its subversive interests, and those who seek to destroy the United States? You certainly have not. But, on the contrary, you have seen her come to the rescue of Harry Bridges, condone his actions, defend him, and do everything that she could to protect him. The history of the attempt to deport Harry Bridges under the administration of Perkins is a disgrace and a blot upon the escutcheon of all Cabinet officers which neither time nor memory will ever blot out. It is my opinion that the last thing in the world that she wanted Bridges to have was justice, and in order to bring Bridges to justice the whole Department of Immigration and Naturalization had to be taken away from her because of the disgraceful and incompetent manner in which she carried it on.

I think the same may be said of her conduct of the Labor Department. This has been a one-sided C. I. O. administration from start to finish, in which she has backed the subversive interests which are destroying this Government. For any of these reasons she should resign, and I, for one, would like to see Congress still impeach her. She declares labor should be accountable to the public, as are banks, insurance companies, and stock exchanges. Have you ever heard her ask any of the socialistic, alien, communistic, racketeering outlaws, who are feathering their own nests at the expense of the honest rank and file of labor under them, for an accounting? These racketeers do not account to anybody, and I am surprised that the Treasury Department has not gotten after them and brought them to account and put them where they belong. How many of these make income-tax returns?

How many of the rank and file know what the finances are under these men? Many of us do know not only the amounts of money that have been extracted from honest labor in the form of rackets, but we also know what coercion and brutality the honest rank and file have had to put up with. Have you ever heard Perkins say anything to this bunch of C. I. O. outlaw leaders about this? No; you never have; and perhaps you never will, unless she is forced to it by a public demand—and I, for one, hereby make that demand.

Madam Perkins also asserts that all union citizens should be American citizens. Did you ever notice Madam Perkins giving any support to my bill that provides, briefly, in substance, that "no alien may represent labor in collective bargaining with any business or industry"? No; she did not, for she could not and maintain the relationship that she has had with these subversive leaders.

It was stated in the paper that "this was seen as her repudiation of Harry Bridges, west coast C. I. O. leader, whose cause she had once championed." I have stood on this floor day after day and have asked Madam Perkins to throw out Harry Bridges, and we even passed the bill to deport him. Madam Perkins would not budge; but you will note that when the bill was finally passed, the Department got too hot for her to handle and it was immediately handed to the Department of Justice. You will note, too, after this Immigration and Naturalization Service was transferred to the Department of Justice, the difference in administration, and that her friend Bridges is now on his way out. When she finds herself with this hot coal in her hands, no doubt she would throw over Bridges in order selfishly to protect herself.

This demand on the part of Madam Perkins in asking unions to maintain high standards, particularly in handling other people's money, to me is the most farcical demagogery and piece of chicanery, in order to fool the American people, that I have ever seen.

Did it never occur to Madam Perkins that it is just as necessary and desirable that she handle the public's labor business just as carefully as she would suggest that the unions handle other people's money? Perkins does not come before the court with clean hands because she has handled the business of the people of the United States, with reference to labor, in even a far worse manner than the racketeering outlaw labor leaders have handled other people's money.

This is another arch piece of hypocrisy:

The public also expects of its institutions that no individuals shall gain at the expense of the public and that no funds will be sidetracked into the pockets of those whose activities serve either their personal greed or antisocial purpose.

Let us look at Perkins' record. You will find that she has violated every one of the fundamental premises that she has expounded here, namely, that she has supported the C. I. O. group in their fight to extract unreasonable amounts, in socialistic control of business, in unreasonable hours, and many other things, and particularly in the amounts of money. Is this Labor Secretary so dumb that she does not yet realize that all of the citizens of the United States have to pay in taxes these things which she has so inequitably given away to these subversive leaders? Could it be a fact that at last it is percolating through her head that many of the upstanding and outstanding young manhood of this country are serving at $21 a month, when this so-called Secretary of Labor has been feathering the nests of the racketeering, socialistic, communistic, outlaw labor leaders of the C. I. O.?

If ever a person wrote their own indictment, their failures in office, their violations of all the rules of decency, Madam Perkins could not have made a more perfect job of it than she has here made to the American Federation of Labor. In view of this, Madam Perkins, and in view of your own record, you are the type of person that certainly should be gotten out of Government, if not out of the United States entirely. Has this not yet percolated through your thick head? And if it has, will you not resign before you are thrown out?

The article to which I have referred follows:

[From the Washington Times-Herald of October 8, 1941]

SECRETARY PERKINS URGES A. F. OF L. TO CLEAN HOUSE—LEADERS SHOULD BE AMERICAN CITIZENS, SHE TELLS CONVENTION

SEATTLE, WASH., October 7.—Secretary of Labor Frances Perkins today called on the American Federation of Labor in its sixty-first annual convention to drive racketeering influences out of its unions by making these organizations elect trustworthy officers and furnish full details of union finances. She declared labor should be as accountable to the public as are banks, insurance companies, and stock exchanges.

Madam Perkins also asserted that all union officials should be American citizens. This was seen as her repudiation of Harry Bridges, west coast C. I. O. leader, whose cause she had once championed.

NOT INTERESTED IN BRIDGES

Bridges' deportation to his native Australia on a finding that he once belonged to the Communist Party, which advocated overthrow of American Government, has been recommended by a Federal referee. Madam Perkins said she was "not interested" in Bridges.

The delegates exhibited sharply contrasting attitudes in listening to messages from President Roosevelt and Governor Harold E. Stassen, of Minnesota. Little more than half of the 600 delegates were in the hall when the President's address was read, and the handclapping was subdued. He had called on labor to support his all-out program of aid to Great Britain and Russia by avoiding any stoppages of defense work.

All the delegates were in their places, however, when Stassen delivered his talk in person. He was interrupted by loud cheers when he called on the Government to prevent abuses that precipitate strikes and ask labor to keep the administration's widespread powers on only a temporary basis. He was given a long standing ovation when he finished.

URGES HIGH STANDARDS

Secretary Perkins, while not using the specific word "racketeering," said the public demands that unions maintain high standards, particularly in the handling of "other people's money."

"The scrupulous accounting for money, regular independent and public audits of all moneys, including insurance funds, dues, and assessments, is bound to be expected," she said, "and it should be done voluntarily by the trade unions, rather than under compulsion. Many of the best unions have established such methods and are to be congratulated.

"With the trade union basic right protected by statute, surely no moneys need be expended, except as authorized by the membership and for purposes which can be stated in a public accounting without embarrassment to anyone.

"The public also expects of its institutions that no individuals shall gain at the expense of the public and that no funds will be sidetracked into the pockets of those whose activities serve either their personal greed or antisocial purpose. The public has this

same expectation of banks, insurance companies, and stock exchange."

SPECULATE ON BROWNE

There was speculation as to whether Madam Perkins' remarks were inspired by the case of George E. Browne, twelfth vice president of the A. F. of L. and president of the International Association of Theatrical and Stage Employees. There have been reports he will not be renominated to the A. F. of L. executive council. He is scheduled to go on trial in New York tomorrow on charges of conspiracy to extort $550,000 from motion-picture companies.

Governor Stassen said the Government should have a clear-cut labor policy and should not take away the right to strike.

Asking for Trouble

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, October 9, 1941

ADDRESS OF HON. GERALD P. NYE, OF NORTH DAKOTA, BEFORE AMERICA FIRST COMMITTEE RALLY AT NEWARK, N. J.

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject, Asking for Trouble, delivered by the senior Senator from North Dakota [Mr. NYE] at Newark, N. J., on September 23, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The candidate of the Republican Party for President in 1940 has since become a director in a British-dominated insurance company, a director of the New York Ship Building Co., which is enjoying contracts approaching a half billion dollars with the United States Government, has become a director or has been nominated to become a director in the Lehman Bros. Corporation, and is an outfront advocate of further involvement of our country in Europe's war.

Nevertheless, he is the same man who on November 12, a few days following the Presidential election, said:

"Mr. Roosevelt and I both promised the people in the course of the campaign that if we were elected we would keep this country out of war unless attacked. Mr. Roosevelt was reelected, and this solemn pledge for him I know will be fulfilled, and I know the American people desire him to keep it sacred."

Some of us are still asking that those promises made by President Roosevelt and Mr. Willkie be kept sacred. I think it altogether fair, in light of what is being revealed by polls and immediate contact with the people, that 90 percent of the people of these United States are prayerfully urging that these Roosevelt-Willkie promises of the late campaign be kept sacred.

Because we are asking and insisting that our country be kept from involvement in foreign war we are called isolationists, with emphasis upon the implication that we are blind, or would bury our heads in the sands, that we would have no social, no economic relations with the rest of the world, that we would simply ignore all the world, and that we would even abandon foreign trade.

Now let's just pause long enough here to see who are the real isolationists in keeping with this loose defining of what constitutes isolationism.

As a result of Presidential conduct of our foreign policy during the last 2 or 3 years, the United States has virtually no shipping or trade activity in the Pacific, we have surrendered to others our ships and tankers until we have all but abandoned trade with South America, and are even without the usual intercoastal shipping on the Atlantic seaboard, largely because we have given our ships to others. Whatever trade exists on the Atlantic Ocean is a Santa Claus trade, a trade that brings us only debt, a trade most costly of maintenance. This is the result, I repeat, of the manner in which our foreign policy has been conducted, a policy that was threatening virtually every power upon this earth excepting only one, a policy which endangered hatred and suspicion. This has been the policy of the interventionists.

This interventionist policy has all but completely isolated the United States. Those who would get us nearer to, or actually into the foreign wars, have accomplished an isolation more complete than the United States has known in all its history. And when this madness is over with, as it will be one day, we shall doubtless find that Great Britain has all our cargo-carrying ships, continuous control of all the sea lanes, her own trade intact, while we have abandoned ours and are without the shipping capacity needed to undertake renewal of our lost foreign trade.

That will be the result invited by the kind of isolationist policy pursued by the Roosevelt administration and the interventionists of America.

Washington and Jefferson were isolationists, but in quite another sense. They were isolationists against the hates and the wars of foreign lands. They were isolationists against the notion that we could hope to reform or in any wise influence Europe in the adoption of American ideology. Jefferson expressed his style of isolation well when he said:

"For us to attempt to reform all Europe, and bring them back to principles of morality and a respect for the equal rights of nations, would show us to be only maniacs of another character."

Dr. Ray Lyman Wilbur, president of Stanford University, brings the Jefferson thought down to date in more modern language when he says:

"If anyone believes the American people can go out and force other nations around to our way of thinking, he has a Hitler complex."

President Roosevelt was once this style of isolationist. It wasn't more than 4 years ago that the President was saying that he would not object to being called an isolationist so long as isolation meant isolation against other people's wars.

I know that I, along with millions of Americans, am isolationist in the sense only of seeking to avoid trouble with and part in other people's wars. The interventionists have won isolation by seeking for and asking for trouble.

The Monroe Doctrine afforded in essence, the kind of isolation that I believe in but definitely not the kind of isolation which the interventionists advocate and further. The President and the interventionists have redefined the Monroe Doctrine. We have had the Doctrine so redefined as to make it an invitation to trouble. As construed by American leadership today the Monroe Doctrine is an instrument which forbids non-Americans any interference on the American continent but which permits America to interfere anywhere in the world. It becomes now, in the hands of interventionists, an instrument to invite trouble for ourselves.

There is nothing new about this venture because for many months the administrators of our American affairs have been asking for trouble; threatening, daring, and pushing others to extremes which could not win anything but trouble. This asking for trouble has brought our country to a distressing need for more of the instruments of national defense. In the providing of that defense, however much people may differ with the occasion for it—in the winning of national defense of adequacy, there is no disunity among the people or in the Congress. There is disunity on the theory that our defense is adequately provided for by defending others or providing the defense instruments for others who in turn might one day surrender them to those against whom we feel required to provide a larger defense for ourselves.

The saddest thing in this day is the knowledge that our national invitations to and for trouble have been always in the name of peace, of keeping our country out of other peoples' wars. With no enemy in sight, with no threat made against us, or even implied, we have pursued a defense policy that has made us, if not in word then by deed at least, a partner of certain belligerent nations.

Look now to the question of how we have been asking for trouble at every turn in the conduct of our foreign policy of the last 3 years.

First came repeal of the arms embargo in the name of keeping us out of war. This action violated neutrality in the eyes of international law and understanding. Indeed, it violated international law. Repeal could have been accomplished only as the administration sold Congress on the theory that the repeal would help us keep out of war. And it will be remembered that with the repeal of the embargo the President said:

"This Government clearly and definitely will insist that American citizens and American ships keep away from the immediate perils of the actual zones of conflict."

Need the American people be shown in detail how far afield from this declaration of September 21, 1939, the President has flown since he accomplished his purpose with repeal?

As if asking for more trouble, and in violation of our own laws, the President dispossessed us of exceedingly valuable ships at a time when our Navy was pleading for more ships. This act, too, was represented by the President as being a step to keep us out of war, however much it violated the spirit of international law.

Asking for trouble as we were, we found ourselves eventually ready to adopt the ways of Europe, the instrument without which a dictator could never thrive; we adopted peacetime conscription and later put military training on a 30-month basis, whereas up in Canada, which is at war, compulsory military training is a requirement for only 4 months, with the Canadian conscriptee subject to service away from home only as he volunteers that service.

This policy of ours of asking for trouble found the President speaking pleasantly only of those countries which would pitch their strength with one belligerent, with "stab in the back" language for those that would not ally themselves as the President would choose they might ally themselves.

The lend-lease bill, with its provisions in violation of international law permitting the repairing of the ships of a belligerent nation in our own ports, and permitting other acts which were in violation of international law, was a further asking for trouble and was attained by the President and his administration with their representation that even these steps were in the interests of keeping us out of war.

The President, and his sons who have chosen to speak elsewhere in the world, have shown a terrible impatience in the lack of

incidents which would bring us more actual trouble, in a seeming policy of everlastingly asking for trouble.

With patience gone, seemingly, because the incident did not occur in sufficient degree to enrage the American people, the President took to the air waves 12 days ago and proclaimed a war. Not a constitutional war, but a war by Presidential utterance. In that fireside chat he ordered American ships to shoot on sight the vessels of certain nations not at war against us. And quite simultaneously comes the announcement of the Secretary of the Navy that our Navy is convoying ships across the Atlantic. This convoying had to be upon the orders of the President of the United States; the very same President who, when in attaining these steps to trouble one after another in the name of helping us keep out of war, had said upon occasion: "Convoys mean shooting and shooting means war."

Put two and two together and we must acknowledge that we are today at war, not constitutionally at war but at war by Presidential proclamation, in violation of the Constitution, and in violation of the wishes of the great majority of the American people.

This is the result of a program of many months of asking for trouble in the name of keeping our country out of war. There may be some confusion in some minds about this day but historians 25 and 50 years hence are going to have no difficulty understanding just what is responsible for our predicament of this hour, or what will be responsible for our involvement in the war if we are involved. Historians are not going to look with any sympathy upon the Presidential declaration, after all of these invitations to trouble have been issued, to the effect that the decision of war or peace is now up to Germany. By what right can any man order our ships to shoot the ships of other nations and then say that the choice of war or peace is up to that other nation alone?

Asking for trouble! And while we have been asking this, we have been parading our representation of interest in peace, peace, peace.

And not once has our Government, under President Roosevelt, made the slightest move to bring about peace. Never has our Government sought to bring warring nations to an understanding. Instead, he has prodded and gibed and driven others on to war. Again, when history of these days is recorded, it shall have to be everlastingly recorded that there never was a better time for peace than now. No peace accomplished later on can be any better or any more enduring than a peace that could be entertained right now. But instead of trying to accomplish an end to this world slaughter, American leadership says, as the President said last February 25: "The first thing is to win the war."

Oh, fellow Americans, who can be so blind as to fail to know the part which our country, under its present leadership, is playing in a continuation of this world slaughter.

How much longer will the American people consent to the surrender by its Congress to Presidential request, Presidential dictate? How much longer will the people let their Congress consent to this continuing asking for trouble? How much longer will there be consent to a leadership of our American thinking by British minds which are bent upon bringing not only American machinery but American lives, and still more American dollars, into the preserving of domination of the world by one power?

I am not blaming Britain for her persistent effort to get us into this war. I cannot avoid blaming my country for the seeming blindness which is taking us into that war. Might I suggest that if we Americans must listen to British statesmen, that we listen to British statesmen speaking in an hour when they were less selfish than they are in this terrible hour of pressure upon them.

We like to think that what we are doing for Great Britain, Great Britain would do for us if we were in her shoes. Winston Churchill told us in 1934, told all the world, in fact, that Great Britain "must be safe from undue foreign pressure. * * * We cannot confine the safety of our country to the passions or the panic of any foreign nation which may be facing some desperate crisis." So we need more notice than that of what we might expect from Great Britain if our positions were reversed in this hour.

Lord Beaverbrook comes to us and eternally preaches that there can be not even faint suggestion of peace with one so lacking in honesty and sincerity as Hitler. Yet in 1938 it was the same Lord Beaverbrook who declared:

"We certainly credit Hitler with honesty and sincerity. We believe in his purpose. * * *"

Britain's lords and earls engage in most persistent effort to convince us that there can be no peace with Hitler. Yet Lord Rothermore in 1938 declared:

"There is no man living whose promise given in regard to something of real moment I would sooner take. He is simple, unaffected and obviously sincere. He is supremely intelligent."

The lone cause of this war, we are told, and we want to believe, is Hitler. Lord Lothian did a grand job for his country in parading this belief for American consumption. Yet it was the same Lord Lothian who in 1938 said of the trouble that was brewing in Europe:

"We are largely responsible for the situation that confronts us today—('we' meaning Great Britain).

"If another war comes and the history of it is ever written the dispassionate historian a hundred years hence will not say that Germany alone was responsible for it, even if she strikes the first blow, but that those who mismanaged the world between 1918 and 1937 had a large share of responsibility."

"The thing to do now is win the war," says the President. "Stop the aggressors." And Winston Churchill seconds the motion with more demonstration of how impossible it is to even think of talking about a peace with Hitler. He may wish now that he had not said it, but in 1938 we found the same Churchill saying:

"I have always said that if Great Britain were defeated in war, I hoped we should find a Hitler to lead us back to our rightful position among the nations."

Aren't we making ourselves the laughing stock for all time to come when we let our thinking be so completely dominated by the pressure of Britons who are under pressure at the moment? Are we going to anticipate that history will record as fact that which some would have us believe today, namely, that our present predicament is one occasioned by unavoidable circumstances? Isn't it rather clear that time must show to our satisfaction, if we are not satisfied now, that our predicament is one by invitation and proclamation of our own, encouraged and invited by foreign and selfish influences that would not do as much for us under reversed circumstances?

We did not make this man Hitler; Britain did. Hitlerism is not the cause that Britain fights; Hitlerism is only the result of a cause. Waste our blood and our wealth in destroying Hitlerism if we will, but let us know that when our war is won, we will have defeated, not the cause of this war but the consequence of Britain's dictated peace following the last war. No one makes quite so plain and clear the causes of this war as has David Lloyd George, who, after this present war was declared by Britain against Germany, stood on the floor of the British Parliament on the 9th day of May 1940 and delivered himself of this feeling, knowing, and understanding address:

"The Treaty of Versailles was not carried out by those who dictated it. A good deal of the trouble was due to that fact. We were dealing with governments in Germany which were democratic governments, based on a democratic franchise, with democratic statesmen, and it is because we did not carry out the undertakings we had given to those democratic governments that Hitler came into power. There was a good deal that was done in Germany more particularly with regard to disarmament. The solid promise that we gave, not merely in the treaty itself but in a document which I took part in drafting, which was signed by M. Clemenceau on our behalf, that if Germany disarmed, we should immediately follow her example, was not carried out, and there is no government that is more responsible for that than the present National Government which came into power in 1931. They had their opportunity. America was ready, Germany was ready—it was a time when Herr Bruening was in charge—but we refused to carry out the terms after Germany had been completely disarmed. We had the certificate of the ambassadors to say that disarmament was completed, but in spite of that we did not carry out our part."

No one outside the inner circle can speak authoritatively in this hour concerning the possibility of the existence of commitments made by Americans, with or without the consent and knowledge of the President, but commitments nevertheless which might have been made to Great Britain, to France, to Russia, to Poland, to the Balkan countries. But it is altogether fair to say, and to say again and again, that if commitments have been made regarding what America would do in certain eventualities—if these commitments have been made and become now embarrassing under invited circumstances, let the President of the United States be made to remember at every minute that he has made commitments as well to 131,000,000 Americans, the folks at home. Commitments that are a first obligation upon the President of the United States.

Come, Americans, chins up. This is nothing more than a Presidential war. Your country is not at war, and will not be at war until it is declared by your representatives in Congress. Don't let that opposition which would break this splendid united front of nonintervention if it could—don't let them inject prejudices and racial strife to accomplish that end. Chins up. The cause of nonintervention is not lost. Indeed, the winning may be just around the corner. We can win. I repeat there has been as yet no declaration of a constitutional war. And I can say to you here and now, without fear of contradiction, that no one knows better than the President of the United States himself that he can't obtain, with the situation what it is at this moment, a declaration of war out of the Congress of the United States.

My Views on Federal Policy

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, October 9, 1941

ADDRESS OF HON. RUFUS C. HOLMAN, OF OREGON, AT PORTLAND, OREG.

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Ore-

gon [Mr. HOLMAN] in Portland, Oreg., on Friday evening, September 12, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, friends and neighbors, our Government is beset with many serious problems—problems vital to our people. These problems involve the safety as well as the prosperity and happiness of all of us who are American citizens. They involve international questions of policy as well as national economic issues.

I would like to talk over with you here tonight my observations relative to these matters. I, as a member of the Senate Committee for Appropriations, its subcommittees for Deficiencies and Naval Affairs, and the Senate Committee for Military Affairs, have some particular knowledge of them due to the exceptional opportunities to learn about them from original and authentic sources of reliable information.

As your Senator in the Federal Congress, I would like to give you, my neighbors, my present views on some of these questions of Federal policy. Can we not consider this most serious situation which now is confronting us without excitement, anger, or malice?

I am more concerned about the growing strength of subversive, intolerant, and disorderly forces within our own country which appear to receive support and encouragement from the executive department of our Government than I am alarmed about possible invasions of our country by foreign foes.

In foreign relationships, let us look before we leap. Now, before any rash commitments are made irrevocably, let us calmly survey the entire field of national perils, our resources, opportunties, and obligations, and then let us do what is best for our own people—the American people.

I am for America first. I must be. I took a solemn oath before the Vice President of the United States in the Senate Chamber of the National Capitol when I was sworn in as a United States Senator. This oath obligates me to give my entire loyalty to the service of the United States Government and to the American people. Others may wander far afield in their thoughts, words, and deeds, but I cannot. I must be faithful to my oath of office, and that is my natural inclination and ardent desire, as well as my patriotic duty. No man can serve two masters.

I cannot have an American allegiance and an allegiance to any foreign nation, or foreign people, at the same time. All I want to do now is to discover the wisest course to pursue whereby I may serve best the interests of all American people and then to follow that course. I can be a politician and choose to run with propagandized and misguided popular clamor regardless of the disasters which such an unprincipled course would produce, or I can take the course which is best calculated to preserve our Government under the Federal Constitution and to protect the American people, even though that course may be very unpopular at the moment. Either course is open to me now. I am free to make a choice.

I have not forgotten the martyrdom of Oregon's most patriotic Senator of 25 years ago—the late Senator Harry Lane; nor am I oblivious to the fact that those politicians are always most popular who vote for every appropriation and against every tax levy. However, I see before me the path which George Washington took when our country labored under very similar circumstances in 1793. I can hear the voice of the patient and wise Abraham Lincoln calling from the same direction. I believe I know what the tormented veterans in the hospital on Marquam Hill and the forever silent soldiers in Mount Scott Cemetery would have me do. I shall try to go along with those who always serve their country regardless of what the personal consequences may be to themselves. I assure you I have no selfish nor ambitious motives now.

During my campaign for the Senatorship 3 years ago, I stated that I favored making our country so strong in a military way that no foreign nation would dare to attack us, and then we should mind our own business. I have adhered to that policy. I have even been effective in raising the President's recommendations for national defense. Let us not confuse, however, national defense with international offense. Let us call things by their right names.

Before we can be effective in any military action, regardless of what our motives and desires may be, we first must have adequate armies, air forces, and navies trained, organized, officered, equipped, and supplied, fit and prepared for any eventuality. We do not have now such a military organization.

While our Navy is prepared, it is held inactive in the Pacific Ocean by the constant menace of the Japanese Navy. Let us consider for a moment this situation.

I am led to believe that it is the conviction of those who are hot for war that our objectives are in Europe. Where we can land our forces there, I do not know. We cannot get to Europe unless our Navy is in the Atlantic Ocean. We cannot take our Navy into the Atlantic Ocean without taking it out of the Pacific Ocean. We then, under present conditions, automatically would surrender the Pacific Ocean to the control of the Japanese.

It is my opinion that without the American Navy in the Pacific Ocean now, Singapore, Australia, and New Zealand would be lost to Britain, and the Philippines, the Hawaiian Islands, and other island outposts would be lost to America; moreover, the Panama Canal, Alaska, and the entire Pacific coast would be exposed to attack, with only an inadequate defense available to us.

The Panama Canal is of vital importance to our national defense. Its defensive protection is not yet completed. I am advised that if a first-class military power should get a foothold—establish a base for operations—in Alaska, the successful defense of the entire territory of our country west of the Rocky Mountains would present some extremely difficult military problems.

Let us consider the present defense of our immediate area—the Oregon country, the Columbia River watershed, which is one of the greatest breadbaskets in the world—a hungry world which soon may be a starving world. Let me remind you that tens of millions of workers in the world have been taken out of construction and production and put into destruction and consumption.

As a member of the Senate Committee on Military Affairs, I have inspected within the past month the fortifications at the mouth of the Columbia River. Much which I know and is pertinent to this discussion I cannot disclose because it is executive information; but I am not violating any confidence when I tell you there is not a piece of ordnance in Forts Stephens, Canby, or Columbia of later design or efficiency than 1898. Whatever could serve Britain at this time has been removed. These obsolete fortifications are exposed to attack from the air. The best guns there have a range of something more than 7,000 yards. The guns on a modern battleship have a range of more than 14,000 yards. Our present defenseless situation is obvious.

I am doing what I can to correct it and to have located and completed at the earliest moment, air bases and depots for both the Army and the Navy in this area; but the fact is there is much to do and not sufficient time or materials and labor with which to do it, if we are to begin hostilities immediately. I have also inspected the naval hydroplane base at Tongue Point. It is modern and up to date; but incomplete and short of certain supplies on account of our aid to Britain. I cannot be more specific. But the condition of our defenses in the Oregon country is about the condition of the national defenses generally throughout the country and for the same reason. After the defeat at Dunkirk our magazines and arsenals were stripped to aid England. I am not criticizing this. I am merely stating a fact; but it leaves us unprepared.

About 5 or 6 years ago the strength on paper of the American Navy was to the Japanese Navy about as 5 is to 3, if calculated on even, or equal, terms as to location. However, the effective strength of a navy, like the effective strength of an army, decreases as the distance of combat increases from its base. The American Navy is stronger off our coasts than it would be off the coast of Asia.

However, during the past 5 or 6 years some of our townsmen, among others, have made large profits in merchandising scrap iron which Japan has needed so desperately. With this scrap iron Japan laid down the keels of larger and more powerful battleships than those of previous design. To meet this increase in the naval strength of Japan we authorized the construction of a two-ocean Navy and made the necessary, current appropriations. We, too, increased the size and strength of our new battleships. We were forced to do this or become an inferior naval power. Then, we discovered that the present locks in the Panama Canal were not large enough to accommodate the battleships and airplane carriers of the new and increased size. So then we had to authorize and make the current appropriations, for a new set of larger locks at Panama. But, of course, we have this satisfaction—some of our citizens made money selling scrap iron to a potential enemy. Others have made personal profits by supplying prospective foes with tin plate when our own stock piles are insufficient for our own needs, while other international traders sold airplane beacons, fuel oil, cotton—an ingredient of some forms of explosives—and a number of other strategic materials and critical minerals to foreign nations now strengthened by these military supplies and apt to attack us with them.

I have been in the West—Utah, Nevada, California, Idaho, and Oregon—much of the time while the Senate has been in a practical recess during the past 2 months, endeavoring to expedite the domestic production of strategic minerals, a number of which are rapidly becoming of critical importance to the national defense. Then we discover that some rash bureaucrats in Washington, without following the ramifications of their impulsive orders all the way through, establish priorities and limit prices for many materials without regulating the costs of essential elements in those materials. This results in the cessation of production of the very things we need most.

Many important industries are facing a shut-down because they cannot now get supplies or equipment vitally necessary for their continued operation. Because a southern Oregon, or northern California, miner of chrome could not obtain a replacement for a broken part of his automobile truck, he had to stop his mining operations. Without chrome and other strategic minerals, the national-defense program will bog down.

This thing of entering and waging a victorious war—and who wants to wage an unsuccessful war—is a most complicated and hazardous undertaking. We have been less than 3 years preparing for the national defense. Germany has been preparing for war for 20 years. She has had the assistance and cooperation of the international profit seekers and traders and financiers of England, France, and America, and now the youth of America is expected to again face slaughter to salvage civilization. It is not fair. One group augments its profits while another group perishes.

No American youth has appealed to me to rush this country into war nor to find a place for him in the active combat units of our military forces. I have heard only from those who do not themselves intend to take an active part in any armed battle of a shooting war.

If it becomes inevitable that this Nation must go to war with somebody, let us be prepared to be effective in that war and to know just whom we are to fight and why. A year ago we were helping Finland fight Russia. Now we are helping Russia fight Finland. France and England each made a solemn covenant with the other that neither ever, ever, ever would make a separate peace with Germany but that both would continue to fight against Germany as long as either of them had anything with which to fight. Since then, France has had to make a separate peace with Germany, and now England is trying to starve and destroy France and France is opposing England. Much of the military equipment and supplies which we sent to France to aid her in her extremity has been used to destroy London and other places in England. May it not eventually transpire that England may find it to her advantage to make a separate peace with Germany as France did? Then what?

I have given effective cooperation to providing aid by this country to England, France, Finland, Norway, and other victims of ruthless aggressions (except in the case of Iran) and shall continue to do so and to protect the American flag wherever it may be; but let us be extremely careful where and when and under what conditions we send the American flag.

In 1788, Alexander Hamilton made the following observation in the Federalist:

"The causes of hostility among nations are innumerable. There are some which have a general and almost constant operation upon the collective bodies of society. Of this description are the love of power, or the desire of preeminence and dominion—the jealousy of power or the desire of equality and safety. There are others which have a more circumscribed, though an equally operative, influence within their spheres. Such are the rivalships and competitions of commerce between commercial nations. And there are others, not less numerous than either of the former, which take their origin entirely in private passions; in the attachments, enmities, hopes, and fears of leading individuals in the communities of which they are members." This observation is equally true today.

The international situation is dreadfully complicated and constantly changing. However, I am conscious all the time that we must make our own country strong—so strong that we shall be prepared to meet any eventuality at the earliest possible moment. Until then let us be very cautious and hold our peace if possible.

America has developed wonderfully efficient airplanes, ordnances, and devices for combat use; but our production of them has been disappointing. Strikes which cause shut-downs of industries essential to the national defense and the shortage of aluminum, have been very serious in the delays which they have caused.

I have not yet been effective in making any contribution to the remedy of the strike situation but I have been able to expedite production of aluminum by securing authorizations and appropriations ahead of schedule for the ultimate installation of all the generators in Bonneville Dam which now supplies power for the production of about half of all the aluminum used for national-defense purposes.

Our armies are short of heavy and light artillery, motorized cavalry, airplanes, tanks, explosives, and matériel of all kinds. On account of these shortages those boys whom we drafted for training have not had the instruction which it is necessary for them to receive to enable them to be efficient soldiers in warfare under modern conditions. In my opinion, it would be cruel folly to rush them into active foreign combat now.

In the program for efficient national defense there are a number of steps which we must take, each in its order. We have planned the first step but have not yet completed it. When we do complete it, prudence dictates that in the light of our experience, resources, and conditions confronting us at that time, we plan and take the second step; and so on until we are truly prepared to be efficient and effective. It seems to me that the President wants to take the thirteenth step first. He would shingle the roof before laying the foundation of his house.

I have observed that some merchants when an unprofitable business seems irretrievable, venture everything upon the destruction of their establishments in a possibly profitable fire. Likewise, I suspect that this urge on the part of the President to get nearer and nearer and ever nearer and finally into the European war may be with the idea of burying the record of 8 years of administrative failures in an international conflict.

At present, it seems to me, we should confine the use of our Army to the defense of our homeland.

Forewarned is forearmed. Consider the fate of France. Let us get prepared for any national need without delay. Let us unite as one people and go forward with sense and unafraid for whatever may be in store for us as American nationals defending our Government under the Federal Constitution and protecting the American people in their homes and in their employments. By rushing into wars abroad between foreign governments we may lose at home that government under the Federal Constitution which has protected the freedom and liberty of every American citizen for a hundred and fifty years. Let us not be rash and impulsive. It is better to be sure than sorry.

Address by Polish Ambassador at Pulaski Day Parade, New York City

EXTENSION OF REMARKS

OF

HON. FRANCIS MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, October 9, 1941

ADDRESS OF HON. JAN CIECHANOWSKI

Mr. MALONEY. Mr. President, on behalf of the junior Senator from New York [Mr. MEAD], I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by His Excellency Jan Ciechanowski, Ambassador of Poland, on the occasion of the annual Pulaski Day parade on October 5, 1941, in New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This great and magnificent city of New York is the proud stronghold of democratic freedom and civilization, wherein millions of free people of many different races have settled as a unanimous and splendid expression of true Americanism and all that it stands for. It has today celebrated the memory of Casimir Pulaski, the noble Polish-American fighter in the American War for Independence.

Today's Pulaski parade has been greater, more powerful, more impressing than ever before. In watching it one could not help feeling that in this march of many thousands of free people there was much more than a mere tribute paid to the memory of one great fighter for American freedom or of one great military leader. The beauty and fervor displayed today in this parade were the spontaneous expression of the deep love for liberty and the readiness to fight for its preservation, which, at this crucial time, when the destinies of human freedoms are in the balance, directs countless millions of civilized human beings.

No people today has a greater mission to fulfill than the American people. The mighty principles of freedom and democracy which inspired the revolutionary movements of the eighteenth century have found their permanent home in this country. Here they have been cherished, respected, and preserved for over 165 years by the American people. They have been applied with sincerity in every walk of life. American history proves that the "government of the people, by the people, and for the people" is no longer an experiment in statesmanship. Its full application has brought lasting happiness, peace, and prosperity. If it ever needed a proof of its wisdom and greatness, the American democracy is today that living proof.

And now, after nearly 2 centuries, during which enlightened humanity has enjoyed the benefits of freedom and of the evolution of progress in thought, inspiration, and scientific advancement, the whole structure of our modern civilization, so painstakingly erected by generations of worthy and God-fearing men and women, is ruthlessly challenged by a barbarous creed, based on human madness, unleashed upon the world by one race alone in quest of an insane lust for world domination.

Practically all the free peoples of Europe who have stood up to fight this menace, the very existence of which is a disgrace to the twentieth century of our Christian era, have been enslaved by its barbaric power.

The American people have benefited by their privileged geographical situation and by the desperate armed resistance of the European democracies to this scourge. During the peace period the American people have anxiously watched the grim evolution toward inevitable war of the peace settlement concluded 20 years before the outbreak of this new catastrophe. That peace was to make the world "safe for democracy," was to make war impossible. It was to sound the opening of a new era of happiness and prosperity to mankind. It was a peace based upon the noble principles of a great American President. It lasted only 20 years, and even less when we take into account the seizure of Austria, the violation of Czechoslovakia, the tearing up of the various clauses of Versailles, and was in fact but a precarious armistice, a breathing spell necessary to the rearmament of those whom the civilized world has today unanimously branded as the enemies of free humanity.

It is but just and fair to commemorate at this time the great fights for freedom of the past centuries. It is just and fair to celebrate the memory of Casimir Pulaski. His love of freedom inspired him to regard this great human birthright not as the privilege of his own nation alone, or of one continent alone, but as the birthright of the entire human race, as an ideal and a creed so universal in its greatness that it is not only the duty but the signal privilege of every human being to sacrifice his time, his fortune, and his life in its defense.

And now, by fateful return of history, to all nations of good will in Europe, to all those whose freedom has been torn from them over

their dying and dead bodies, to all those who have been enslaved by the barbaric hordes of Hitlerite pan-Germanism, the great American democracy and the American people stand out as the stronghold of the lofty ideals for which they are fighting, as the last oasis of human sanity and peace, as the great hope of a better dawn in the future. That is why I take the liberty of stressing the great responsibility of the American people in this fateful hour of human destiny.

In the course of these 2 years of the war the people of the United States, under the leadership of their President, have proved that they are conscious of the menace which has swept the Eastern Hemisphere into practical slavery and which threatens this hemisphere as well.

The future happiness of the whole world depends on the further rapid development of the powerful support which this great democracy is now so generously giving to insure the victory of democracy in the name of the four human freedoms over the forces of destruction. In fact it is hardly too much to say that you, the American people, hold the destinies of the world in your hands. Your effort alone can save humanity. And on victory alone, there being no possibility of compromise, a new, better, more secure and lasting peace will have to be established. And it can be established if this time we have at last learned the lessons of past and present history, and if democracy proves itself worthy of its ideals. If it is prepared to go the whole length in readjusting, nay, in building up from its very foundations, a new, just, and powerful world system, based upon the wise principles of the equality of rights of nations, of federation and community of interests as well as of unity of ideals. Democracy has not proved itself ready or willing to launch a united offensive in wartime. From all angles of the world, democracies have watched complacently as one after the other of its bulwarks were being ruthlessly torn down. It has also been remiss in peacetime, during which democratic statesmen indulged in wishful thinking, when it was time to act.

This must not happen again. Over the countless millions of human lives sacrificed in its name, democracy must rise to its full height. It must revise its own record. It must purify its practices. It must regain its virility. It must remember that it has been created as a system of life for peaceful relations between human beings. It must therefore take the offensive in the creation of a new and bold peace settlement, based on security, indomitably prepared not only to defend, but to attack all those who may challenge it in the future. It must be bold and brave in solving all those human problems which this war has bared and shown up in all their urgent vastness. Democracy must be prepared to meet the requirements of these great and terrible times that we are at present living. It must solve unflinchingly together with the problems of security, the great social and economic problems as well.

No lasting peace can endure without security, because security alone inspires confidence, and no international relations can develop normally if they are not based upon mutual confidence. No viable system of social welfare can exist which is not based upon a more just distribution of wealth. As security is the basis of peace, so prosperity and contentment are the bases of its durability.

In this conflict the very survival of human freedom everywhere is threatened. The greatness of what is stake is such as to justify any sacrifice and every effort. But the eleventh hour has struck.

There is no time to lose.

"Very Sad Case"

LETTER FROM FRED H. FREE

Mr. NYE. Mr. President, I ask unanimous consent that a letter to the Sioux City Tribune from Mr. Fred H. Free be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Sioux City Tribune of October 4, 1941]

"VERY SAD CASE"

EDITOR SIOUX CITY TRIBUNE: Your readers may be interested in the sad fate of a neighbor of mine who was formerly engaged in the retail mercantile business. He ran a general merchandise store for many years and extended credit very liberally to his many customers. Finally he attempted to collect these accounts because he was financially embarrassed. With but one exception, all of the customers told him that they were too poor to pay. Only one Finlander paid his debt. Just as my friend was about to go into bankruptcy he fell heir to considerable money. He paid the wholesale bills and notified all of his dead-beat customers that he was going to run a cash-and-carry store from now on, and since the aforesaid dead beats still did not have any money he would loan them some to buy goods at his store. Said that these people were good neighbors and Anglo-Saxons like himself and he wanted to keep their friendship. In order to make these loans he compelled his own family to live under conditions of extreme economy. One-third of the family were not properly fed or clothed.

His wife filed charges of insanity against him. He claimed before the insanity commission that he was running his affairs just as the brightest college professors had advised and the Government at Washington was doing, but the insanity commission said he was so nutty that a medical examination was unnecessary, and he was committed to the State hospital for the insane. From there he writes to his friends asking them to get rich by spending all the money they have. He also writes articles on how to attain the more "abundant life" by cutting down production, raising taxes, and increasing the output of ships, munitions, and airplanes by encouraging strikes. This keeps him from getting out on parole.

It is a very sad case.

Yours truly, FRED H. FREE.

The Right to a Free Press

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, October 9, 1941

ADDRESS BY NICHOLAS ROOSEVELT

Mr. CAPPER. Mr. President, there was held in Washington this week an interesting series of meetings preparatory to the Nation-wide celebration next December 15 of the one hundred and fiftieth anniversary of the adoption of the so-called Bill of Rights amendments to the Constitution of the United States. A joint resolution, sponsored by Representative LEON SACKS, of Pennsylvania, in the House, and by myself in the Senate, has been approved, and designates December 15, 1941, as Bill of Rights Day, commemorating the one hundred and fiftieth anniversary of approval of the first 10 amendments by the State of Virginia, this ratification by the State of Virginia being the action that adopted the amendments.

On Tuesday of this week a number of patriotic organizations participated in a pilgrimage to Gunston Hall, in Washington, at one time the home of George Mason, known in history as the "father of the Bill of Rights amendments." Preceding the pilgrimage to Gunston Hall, a luncheon under the auspices of the Citizenship Educational Service at the Hotel Raleigh was addressed by Nicholas Roosevelt, editor of the New York Herald Tribune. I ask unanimous consent that the address be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

George Mason, James Madison, and those others who inspired and framed our Bill of Rights a century and a half ago, used the phrase, "freedom of the press." I have sometimes thought that if they were alive today they would use, instead, the words, "freedom of expression."

The right to freedom of expression belongs to all the pepole, and not merely to a single group, whether it be newspaper owners, the officers of the Government, or the spokesmen for a political party. Newspaper publishers and editors, of course, are vitally interested in freedom of the press because this freedom directly affects their livelihood. But the press is only a channel through which people may be informed of what is happening in the world and in their particular community, and through which opinions about these things may be aired. If the people are deprived of a free press and are given, instead, a press which is controlled by the Government, they are denied one of the most important mediums of free expression and constructive criticism of public affairs.

Many agents of government have, of course, always wanted to be able to control the press, for the simple reason that if they can silence criticism, prevent the publication of the truth, and mislead the people, they, the agents of government, will be free to do what they want without fear of being brought to book. This is why fredeom of the press has always been resented by wrongdoers, feared by weaklings, and abolished by dictators.

Freedom of the press is, as a matter of fact, inseparable from freedom of speech and freedom of the air. It includes the right to denounce evildoing even if it be in the seats of the mighty, and to criticize the acts and policies of those in office. It implies freedom to read and freedom to hear—freedoms, mark well, which the dictators have ruthlessly suppressed. Its very essence is freedom to think, and freedom to hold and communicate an opinion. But these freedoms mean freedom from government control and regulation, and should not be confused with editorial policy, or with the moral obligations of an editor to present facts accurately.

When a government takes over control of what may be said in print or over the air, this control is not limited to what the publishers and broadcasters themselves may say.

Government censors will hold these men responsible for what they print or allow to be broadcast—which means that they will be held responsible for what other people say, as well as for what they say themselves. Not only will they not be permitted to air views of their own which the censor does not like, but they will be forbidden to circulate the views of anyone else which rile the censors. In this manner government will easily assume control over everything which anyone may write or say. It is but a step from such censorship to the punishment, not only of publishers, editors, writers, and broadcasters, but also of any individual who persists in expressing his own views or in circulating articles, pamphlets, books, or broadsides which express his views.

When you punish men for the thoughts that they hold, you put an end to freedom. As that great apostle of liberty, the late Justice Oliver Wendell Holmes, put it, "we should be eternally vigilant against attempts to check the expression of opinions that we loathe and believe to be fraught with death."

As a matter of fact, there is no greater tribute to the importance and value of freedom of the press than the promptness and completeness with which the newspapers have been muzzled by each new dictator in Europe. The only thing to equal it is the severe penalty which the Nazi government has imposed for listening to foreign radio broadcasts in Germany. Each dictator is so fearful of the truth that he has done everything in his power to suppress it. The breath of life of a free press, in contrast, is to be able to air the truth, and, when the truth is obscure, to facilitate the freest possible discussion of current problems. No dictatorship can long endure if the press remains free.

In the light of what we now know about the methods of despotic rulers it is, I think, particularly interesting to hark back to the very words which the great statesman who lived in this beautiful Gunston Hall himself wrote into Virginia's Declaration of Rights: "The freedom of the press," he said, "is one of the great bulwarks of liberty, and can never be restrained but by despotic governments." Despotic governments, as I have already pointed out, cannot tolerate a free press. By the same token a free people cannot keep a free government without an informed public opinion. There can be no informed public opinion except through the unrestricted use of the printed and spoken word. This is why any attempt to curb the freedom of the press must be regarded as an attack on the very foundations of the American system. This is why, so long as the means of expression remain unhampered by Government control, the American way of life can be made to prevail.

Statement of Hon. Oscar Johnston, President, National Cotton Council of America, Respecting Price Fixing

EXTENSION OF REMARKS

OF

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

STATEMENT OF HON. OSCAR JOHNSTON, PRESIDENT, NATIONAL COTTON COUNCIL OF AMERICA, TO HON. HENRY B. STEAGALL, CHAIRMAN, COMMITTEE ON BANKING AND CURRENCY

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Hon. Oscar Johnston, president, National Cotton Council of America, dated August 6, 1941, to Hon. HENRY B. STEAGALL, chairman, Committee on Banking and Currency, respecting the fixing of prices and submitting essential provisions to be incorporated in H. R. 5479 or any other bill relating to fixing prices, to wit:

NATIONAL COTTON COUNCIL OF AMERICA,
Scott, Miss., August 6, 1941.

Hon. HENRY B. STEAGALL,
Chairman, Committee on Banking and Currency, House of Representatives, Washington, D. C.

DEAR MR. STEAGALL: With your very kind permission, the following statement is submitted to your committee, with the request that due consideration be given to the statements and recommendations contained therein.

The statement is made by the National Cotton Council of America in behalf of an organized raw-cotton industry. Embraced in the industry are some 10,000,000 people engaged in and dependent upon production of raw cotton and cottonseed, some 12,000 cotton ginners, some four or five thousand cotton warehousemen, some four or five thousand cotton merchants, some 1,000 or more spinners of raw cotton, and between four and five hundred persons, firms, or corporations engaged in the business of crushing raw cottonseed.

We have given careful and mature consideration to the terms and provisions of H. R. 5479, entitled "An act to further the national defense and security by checking speculative and excessive price rises, price dislocations, inflationary tendencies, and for other purposes."

We here take the liberty of making certain definite recommendations with regard to the proposed legislation.

We recognize the necessity of safeguarding the Nation against unsound and unhealthy commodity inflation as well as against a monetary inflation.

We feel definitely that any artificial interference with normal economic laws is only justified when essential to protect two groups of citizens, namely, producers and consumers.

In a well-ordered economy there should be a constant flow of raw products—vegetable, animal, and mineral—from the producer to the consumer, and of money in payment therefor from the consumer to the producer. Around the circumference of the economic circle so created are numerous essential intermediaries—buyers, dealers, handlers, processors, transportation, insurance, warehousing, distribution, and banking facilities. These various intermediaries are an essential part of our economic system. Each and all must function to insure a sound system, and each such essential intermediary is entitled to a just and equitable compensation for his skill, labor, capital, and service.

A sound economic system can be said to exist only when the original producer receives for his product, by way of compensation, a price which will insure to him an equitable share of the Nation's income, and when each subsequent intermediary receives for the service performed an equally equitable compensation, and when finally the finished product, ready for consumption or utilization, comes into the hands of the ultimate consumer at a price determined by, and definitely related to, the price paid to the producer plus the cost incident to the processing, handling, transporting, etc.

Our Government should be interested in protecting, and, insofar as it may be able to do so, guaranteeing to producers markets for their commodities in sufficient quantities and at prices per unit which will give to the producers an equitable and ratable share in the Nation's income, enabling them to maintain a standard of living equal to the standard enjoyed by others, having due consideration for labor, skill, capital, and other related factors involved.

A government is only justified in interfering with the normal operation of economic principles when such interference is essential to preserve for and guarantee to its citizens those standards of living to which the American citizen is entitled because of the enormous existing and potential wealth of the Nation.

When it is essential that the Government undertake to regulate and control the application of economic principles it is important that it do so to as limited an extent as will accomplish the desired end; it is equally important that, insofar as possible, each and every act of the Government conform to natural economic laws.

The primary objective of the Government should at all times be to protect, preserve, and promote income of producers, having in mind at the same time protection of the consumers.

To the end that both producers, consumers, and the intermediary agencies may be protected, it is important that such action as may be taken by the Government affecting price levels be taken only after painstaking and exhaustive investigation to determine with certainty the consequences which will follow such action.

In the interest of our general economy the National Cotton Council of America respectfully submits that such legislation as may be enacted in this connection contains the following fundamental essential provisions:

1. There should be an administrative body consisting of a board of not less than five individuals appointed by the President and confirmed by the Senate, the members of this board to be representative of agriculture, labor, manufacturing, distribution, with at least one member specifically designated to represent the consumer. The board should be charged with full authority to administer and execute the provisions of the act in question.

2. The board should have full authority to set up such an organization and employ such personnel as may be essential to the administration of the law, and should be adequately financed.

3. Decrees, orders, and rulings of the board should have the force and effect of law, and violation thereof by persons to whom such decrees, orders, and rulings are applicable should be punished as crimes or misdemeanors.

4. Decrees, orders, and rulings of the board, having the force of law, should only be entered by the board when predicated upon and in accordance with the weight of evidence adduced at, or as the result of, full investigation, including open-record hearings as which interested persons shall have had an opportunity for presenting statements and evidence of whatsoever character or nature relevant to the subject matter under investigation. All reports of investigators, all documentary evidence, and transcripts of all testimony submitted in connection with any such investigation should be made a matter of record, such record being available to the public. In any trial of a person charged with violating a decree, order, or ruling of the board, the court having jurisdiction may, at the instance of the defendant, examine the record upon which the decree, order, or ruling is predicated for the purpose of judicially determining whether or not such decree, order, or ruling is predicated upon the weight of the evidence, and if the court shall find that the decree, order, or ruling is not so sustained, the defendant shall be acquitted.

5. All decrees, orders, or rulings affecting or attempting to fix price levels should give due consideration to producers, consumers, and intermediary agencies.

6. No decree, order, or ruling made by the Board should be retroactive, or impair the obligation of any valid contract, or affect the operation of any contractual relationship be-

tween persons, firms, associations, individuals, or political entities.

7. In cases where price levels are fixed, such levels should be sufficiently flexible to permit and require raising or lowering such levels ratably and proportionately as the factors upon which such levels are predicated shall vary.

8. When and if a price level is determined, prices and costs, upon which such level is predicated, must be simultaneously determined, this to include cost of raw material, cost of labor or wage levels, the spread allowed for each step or process taken or applied in the passage of the raw product through its various stages into the hands of the consumer. The board should have the power to control these factors by licensing persons in any way engaged in the distribution of commodities involved.

9. In the matter of fixing prices, the board should at all times be required to maintain such price levels as will protect the original producer, the laborer, or wage earner, the intermediary agencies, and the ultimate consumer.

Respectfully submitted.

NATIONAL COTTON COUNCIL OF AMERICA,
By OSCAR JOHNSTON, *President*.

Freedom of Speech and of the Press

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Thursday, October 9, 1941

EDITORIAL FROM THE BOSTON POST

Mr. LODGE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a valuable editorial from the Boston Post of the issue of October 1, 1941, relating to interference with free speech and to censorship of the press. Speaking as a former newspaperman, I hope that this will not become a national policy, because that is not the way to get national unity.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Boston Post of October 1, 1941]

A FADING FREEDOM

This is the week in which the freedom of the press is noted, written about and extolled in the public prints from sea to sea, in the cities and in the countryside of our native America.

It is a delicious feeling, to be sure, to revel in the heartening atmosphere which these blurbs engender.

But the man who gives American readers the straight truth about freedom of the press cannot be honest with himself if he praises the present situation in this country. Either that or he doesn't know what he is writing about.

Free speech is on its way out in this country. The man who raises his voice is called a friend of Hitler from the White House.

And the free press, despite constitutional guaranties and a red-blooded history of crusade against oligarchies, bureaucrats and special interests, is also on its way out.

To the utter shame and dismay of the organized press, the first move toward governmental control of the news matter in your daily paper came from a newspaper publisher.

That man is Frank Knox.

Despite the fact that he was rejected by the people of this country when he aspired to high office, he was placed in the post of Secretary of the Navy and from this eminence he slapped down a censorship which not only was un-American but was stupid.

The Navy as an organization has long been noted for its abysmal ignorance of public affairs and the public mind.

Perhaps it is because the service, of its nature, is remote from sources of public information. But time and again, in disasters, newspapermen have found the Navy totally lacking in any knowledge of what the public is entitled to in the way of information.

When Secretary Knox took office the Navy was improving in public relations. But his censorship reversed that situation. British sailors flooded our streets and he swung the big stick on reports of why they were here. The former publisher, however, used attractive tid-bits of information in his own magazine articles.

The Knox censorship served as an entering wedge into the whole question of freedom of the press, which was bothering the advocates of the Socialist labor dictatorship which is facing the country.

Leon Henderson, who is a price czar even before Congress has passed a law on price fixing, showed the press where it stands when price fixing is in vogue.

He declared that he would not be deterred from controlling newspaper advertising prices by "any waving of the freedom of the press at me." This seems to assure his accusers of his Communist background.

The new dealers are examining carefully what the automobile and oil companies are spending for advertising, with the view to shutting off from revenue those journals which do not agree in entirety with the schemes of the mighty men of Washington.

The pressure is on. The plans are complete and in event of total war a free press would be no longer present, despite the Constitution and the will of the people of America.

Charles A. Lindbergh

EXTENSION OF REMARKS
OF
HON. GERALD P. NYE
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, October 9, 1941

TELEGRAM FROM S. STANWOOD MENKEN TO AMOS R. E. PINCHOT, AND REPLY THERETO

Mr. NYE. Mr. President, I ask unanimous consent that a telegram from S. Stanwood Menken, and a letter in response thereto from Amos R. E. Pinchot, may be printed in the RECORD.

There being no objection, the telegram and letter were ordered to be printed in the RECORD, as follows:

NEW YORK, N. Y.

AMOS R. E. PINCHOT,
Milford, Pike County, Pa.:

May I as an old friend knowing your broad democratic and humanistic views urge upon you to consider the importance of the America First Committee disavowing Lindbergh. We have no room in America for his pro-Nazi undemocratic advocacy. He is a great comfort to Germany, and you can do no greater service than disavowing him.

Best personal regards,

S. STANWOOD MENKEN.

NEW YORK, *October 4, 1941.*

S. STANWOOD MENKEN, Esq.,
New York, N. Y.

DEAR STANWOOD: Your wire to me came at a time when the National Committee of America First was about to meet in Chicago to issue their statement re Colonel Lindbergh's Iowa speech. And since that statement was published, perhaps the need of an answer to your wire lies only in the fact that you are an old friend whose opinion and good will I truly value.

Our statement said that we did not consider the Lindbergh speech anti-Semitic. As you know, it did not criticize, or tend in any way to criticize, the Jewish people on the ground of race or religion. It did, however, state plainly what I think you will agree is true—namely, that as a group the Jews of America are for intervention and that they constitute one of the main forces for intervention. And this I have heard no Jewish leader or critic of the speech in any way deny. They may have done so, but I haven't heard of it up to date. Indeed, the strong and almost universal prointervention sentiment of the Jews in this country is as generally conceded as it is natural and understandable.

I may be wrong, but in view of this I see no more impropriety in expressing the opinion, provided it is sincere and well founded, that the Jews are interventionists than in saying, for example, the people of Polish or Dutch descent in this country are as a group interventionist. After all, why, in discussing the affairs of our country, is it either wrong, antisocial, or intolerant to say that any group is interventionist? Interventionism is no crime. Therefore, why should the Jewish people, who, because of Hitler's persecutions, have so much reason to desire intervention, and who are undeniably for it, ask that this fact should never be discussed, and that it should be surrounded by a taboo?

It seems to me—and here I would like very much to have your opinion—that the way for the Jewish people to have met Lindbergh's statement, if it wasn't true, was to have some of their conspicuous leaders come out and say it wasn't true in clear words. Instead of that, as it seems to me, they have put forward a claim to a sort of special privilege to have immunity from having their stand spoken about in public. And I don't think this is good stuff or wise stuff in the long run.

In this country decisions are still made, to a large if diminishing extent, by public opinion. In any democracy it is desirable that all groups of people, all interests should record their opinions and their stands on public questions frankly and openly, and should welcome equally open and frank discussion. That, I think, is the way we get on best. And I don't for a minute believe that it helps things to say: "Why, here is a group, here is a portion of our body politic—Jews, or Catholics, or Protestants, or people of French, Belgian, German, Russian, or other extraction—whose particular opinions and aims must never be mentioned aloud, and may be spoken of only in whispers."

I am deeply concerned about this matter. I think the Lindbergh statement was true. And so far I have met no Jewish man or woman who doesn't admit it's true, and very few who are not hell-bent for intervention.

I'm inclined to believe that it would have been better, from many points of view, if Jewish leaders had replied to Colonel Lindbergh by saying: "Yes, of course we are for intervention. And here are our very good reasons," or else not to have taken issue at all. As things stand, many who are pressing the country along the road to war are now engaged in calling attention to the Jewish

prointervention stand by denouncing Lindbergh, who mentioned it aloud, as intolerant.

I think the matter could be helped if some big Jewish leader would take the bull by the horns and state the facts. But I am by no means convinced that the errors that have been made can so easily be healed.

Nobody is much concerned if one says that the people of German or Italian extraction in this country are, on the whole, anti-interventionist, which happens to be the fact. No one is much concerned if it is said that the administration, heavily backed by the opinion of certain Southern States and various domestic and foreign groups, is interventionist, that is to say believes that this country should enter the war on the side of Great Britain. But if you say the Jews are, on the whole, for the same program as the President, etc., you must expect trouble. And this seems to me quite silly and unnecessary in a nation which supposedly plays no favorites, in a nation where the public attitudes of the people and all groups that compose them should obviously be discussible.

Needless to say I'm thoroughly opposed to anti-Semitism in any form, and equally opposed to any discrimination for or against any group on account of race, nationality, creed, or anything else. And I just can't bring myself to believe that any group ought to regard itself as occupying a position where its deeds, words, or attitudes in regard to any public question should be unmentionable. There's something wrong about that. And there's something wrong about the idea that the person who does mention them, fairly and objectively, should be accused of trying to incite prejudice.

I want to be fair and reasonably sensible, especially as I'm convinced that the worst possible thing for the Jews in America is to sour on anybody who talks frankly about questions affecting the Jews, and refuses to surround them with foolish taboos which, in the long run, cannot fail to defeat their purpose.

At the present moment we, as American citizens, face the responsibility of taking our part in choosing between intervention and nonintervention, between peace and war, which is perhaps the most important decision a people is ever called on to make. On the one hand we can choose peace and maintain the so-called defensive position, advocated by America First; Colonel Lindbergh; Hanson Baldwin, of the New York Times; Maj. Al Williams; Col. Frederick Palmer; Lieutenant Colonel Phillips, of the Army General Staff; and almost every military authority, a position in which our country and, indeed, this continent and hemisphere, is admittedly safe from invasion, provided we go to it and accumulate the air power which is within our ability to have in the near future.

On the other hand, we can, if we like and, as the interventionists advise, abandon the defensive position and send our military forces to fight abroad from three to nine thousand miles from our home bases. We can follow a naval war up with an expeditionary force on the, I believe, utterly false theory that a great overseas expedition can be landed on hostile shores, against modern land defenses and modern bombing power, without incurring a staggering disaster. But whichever course we choose, it is essential that everyone of us should be guided by just one primary consideration, asking ourselves but one question: Which course is for the best good of our country?

Many of us, and I happen to be among the number, have had friends or relatives who have been liquidated or subjected to barbarities at the hands of one or another of the unspeakable dictators of Europe. And the effect of this upon our attitude toward war is necessarily strong. Nevertheless, hard as it may be, and irrespective of whether we are Catholics, Jews, or Protestants, we should try to allow no such circumstance to sway us in our judgment on the war and peace issue. I hope and believe that you will agree that it is the interest of our country and our people that should guide us exclusively in this matter. Americans should be for America first, just as the English are for England first, preferring the welfare of their own land to that of all others.

The foregoing seems to be not only the proper, decent, and human conclusion, but the practical one dictated by common sense and the lessons of history. For the sake of our own civilization and, for that matter, civilization in general, we should protect and cultivate our own garden, maintain our own political and economic systems and way of life that have made us a mighty, free, and beneficent power.

Speaking of history, we must not forget that nothing stands out more clearly in history, whether ancient or modern, than the fact that no nation has ever embarked on and followed far-flung, ambitious schemes of world conquest, world control, and world reform, such as Mr. Roosevelt is propagandizing right now, without losing its own integrity, its power, and its usefulness to its own people and everyone else.

One of the reasons that I joined America First was that it sternly rejects the destructive and silly notion that America should go forth over the world and dominate it, fight its wars, write its peace, and from that point proceed to reform all the peoples of the world, democratizing them and guaranteeing them a millennium of justice and happiness, world without end, amen!

Stanwood, this frothy yet deadly, megalomanial dream, "dream of the strong man making great and greater ever things that are not of God," as our friend Euripides put it some time ago, is as crazy as the mutterings of some poor devil dying of ureamic poisoning. And, what is more, it is the same terrible dream that inspired the Greeks, when they multiplied their responsibilities beyond their strength and went in for empire; that sustained Louis XIV when, drunk with executive power, he went forth to bring French culture to the world; that bled the French people white under Napoleon and landed their peerless leader in exile; and that now lurks in the minds of people who have no use for democracy and think in terms of personal power, here and abroad.

Drop me a line, or drop into my office some day on the way uptown. I'd like to see you again and talk things over, especially if, in your estimation, my letter is on the wrong track.

Sincerely yours,

AMOS PINCHOT.

P. S.—Re your estimate of Lindbergh, I must disagree with you on that point. He is neither pro-Nazi nor undemocratic. He is simply saying now what Roosevelt and Willkie were saying up to the moment the ballots were counted on November 5, namely, that the interests of the American people demand that we should keep out of foreign wars and promptly build an impregnable defense. If that is being pro-Nazi, or "a comfort to Germany," then Roosevelt, Willkie, and the principal leaders in both parties were a comfort to Germany till they suddenly changed their tune when the polls closed on election day. The truth is Lindbergh has remained sincerely and uncompromisingly American, at a time when foreign and domestic propagandists and hyphenates have, as in the case of the former World War, made it fashionable, in certain circles, to put almost any country ahead of our own. I am personally grateful to Colonel Lindbergh for helping to keep America patriotic and sane.

One Hundred and Fiftieth Anniversary of the Founding of the City of Hamilton, Ohio

EXTENSION OF REMARKS

OF

HON. GREG HOLBROCK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

EDITORIAL FROM THE HAMILTON (OHIO) JOURNAL-NEWS

Mr. HOLBROCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, We See a City of Progress, by Mr. Homer Gard, publisher, on the celebration of the one hundred and fiftieth anniversary of the founding of the city of Hamilton, Ohio.

Mr. Gard is a distinguished citizen of Hamilton.

The editorial follows:

[From the Hamilton (Ohio) Journal-News]

WE SEE A CITY OF PROGRESS

(By Homer Gard)

Fifty years ago I stood at the corner of High and Second Streets and watched the Hamilton centennial parade of 1891 go by. My part in that one-hundredth anniversary celebration of Hamilton was, first, a newspaper helper, and, secondly, an onlooker. Men older than I, and at that time among the leading men of Hamilton, were prominently active in many ways.

The forward-looking picture of Hamilton presented by Thomas Millikin in 1891 continues as impressively today. In the last 50 years the increase in size of our manufacturing plants, our retail-store business, our educational institutions, our banks, our schools, our churches, the ownership of our public utilities, all go to make up a city in excess of 50,000 population, a city unique in the United States that owns and operates all its public utilities. The tax value of Hamilton 50 years ago was $40,000,000. Today, in our sesquicentennial year, the tax value is estimated at $160,000,000.

One of the things that impressed me at the 1891 centennial celebration was the opening address by Thomas Millikin, lawyer, who was the president of the general centennial committee. Knowing him so well personally, I listened most intently to his eloquently expressed thoughts. So today, at this sesquicentennial celebration, it seems to me that some of the things Mr. Millikin said are just as interesting, possibly more so, than when he spoke them in 1891. So I turn back the pages of history and quote Mr. Thomas Millikin, the president of the general committee of Hamilton's centennial in 1891.

"We look back from this day through a hundred years—through a century of marvelous growth and development. The same sky is overhead, the same sun shines upon us, the same river that in January 1791 bore upon its bosom the canoes of Simon Girty with 300 Indian warriors to the attack upon Dunlap's Station, and in September of the same year flowed past the site of Fort Hamilton, still flows in its channel. The same hills that stood sentinel over the valley, and looked down upon the old fort are still here, but stripped of the magnificent oaks that were their glory."

This week is dedicated to the beginning of Hamilton, to those men and their families who came as pioneers into the forests between the two Miami Rivers and to those men and women who have since played parts, no matter how large or small, in the development of Hamilton and Butler County.

Hamilton had its beginning in 1791 as a fort—an outpost established by the white man in his expansion westward. Today, after 150 years, Hamilton is still a fort, not in the sense of an outpost against the Indians, but in the sense of a fort in which are the deep-rooted democratic ideals of an American community determined to retain those principles written with the sacrifice and blood of our forefathers.

Hamilton and Butler County history is rich in accomplishment. Business and industry and agriculture have grown steadily through the years and with their growth has been the companion growth of community pride and civic interest. Today Hamilton is known in the world's markets for its products and in world civilization for its democratic ideals.

The Journal-News believes it is fitting that Hamilton and Butler Counties properly celebrate this one hundred and fiftieth birthday. The Journal-News believes that such a celebration not only creates an interest in things gone before but also makes the people of today aware of their obligations to the generations to come.

One hundred and fifty years is a long, long time indeed. But as the Hamilton and Butler Counties of today look back through the century and a half of history, there is reason indeed to have fitting celebration for the rich heritage of the passing years.

Too often in this twentieth century do people forget the richness of the past and think only of the things in which they are interested today. Too often do people forget that many of the things they enjoy today have been made possible only because of the work or sacrifice of people who have gone before. And too often do people forget that we in this generation can do things for the future generation just as the founders of Hamilton did things for us.

Let us, therefore, be mindful in this sesquicentennial year of the rich heritage we have received from those gone before. And let us be mindful of our obligation to the future so that our heritage to future generations will be of the same high standard received by us.

Justice Louis Dembitz Brandeis

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

Mr. COCHRAN. Mr. Speaker, the question as to when Louis D. Brandeis, retired Justice of the United States Supreme Court, who died Sunday night in Washington, first took up the practice of law was one that was debated for a long period, but the late Justice settled this question himself by declaring that he was admitted to the bar in the city of St. Louis in 1878, following his graduation from the Harvard University Law School, and it was there that he began practice, in November 1878, in a building at 505 Chestnut Street. It was in May 1931 that Justice Brandeis wrote a letter to Mr. Irving Dilliard, editorial writer of the St. Louis Post-Dispatch, on this subject. The letter follows:

SUPREME COURT OF THE UNITED STATES,
WASHINGTON, D. C., *May 29, 1931.*

Re yours of 25th.

DEAR MR. DILLIARD: My thanks for your generous clipping.

Answering your inquiries:

I lived in St. Louis from November 1878 to June 1879; was admitted to the State and Federal bars (probably in November); and had my office with James Taussig (whose assistant I was) at 505 Chestnut Street. I lived with my sister, Mrs. Charles Nagel, at 2044 Lafayette Avenue.

I think my first printed brief was in the case of *Martin Michael* v. *Joseph H. Locke*, in the circuit court, city of St. Louis, at the June term, 1879; later submitted to the court of appeals as *Cimbat Co.* v. *Locke*.

Cordially,

LOUIS D. BRANDEIS.

MR. IRVING DILLIARD.

In 1936 the St. Louis Bar Association prepared a bronze commemorative tablet which will be found at 505 Chestnut Street. The inscription on that tablet reads as follows:

On this site Louis Dembitz Brandeis, Justice of the Supreme Court of the United States, began the practice of law in 1878. From this spot spread the influence of a great lawyer, a social philosopher, and a wise and just judge. Presented by his friends, under the auspices of the Bar Association of St. Louis, 1936.

The above information undoubtedly will be of value in the future because in years to come biographies of this great man are sure to appear.

Mr. Speaker, I was a great admirer of Justice Brandeis. While it was stated at the outset, when his nomination to the Supreme Court was opposed, that he lacked a proper judicial temperament, this was not the real reason for the opposition to his confirmation. In one sentence the Honorable DAVID I WALSH, who is now a United States Senator from the State of Massachusetts, and who appeared before the Judiciary Committee of the Senate in support of the nomination, gave the real reason for the opposition. I am quoting that sentence:

The real crime of which this man is guilty is that he has exposed the iniquities of men in high places in our financial system.

Mr. Speaker, I wish everyone in this country could read the book written by Justice Brandeis long before he was nominated by President Wilson entitled "Other People's Money." If the Congress of the United States had created the Securities and Exchange Commission and passed the laws that are now upon the statute book which are administered by that Commission, I say without fear of contradiction the people of this country would have been saved billions of dollars. In that little brochure Justice Brandeis told the story of interlocking directorates and how the great financiers of this country handled other people's money. Justice Brandeis was never forgiven by the great financiers of this country for writing that book.

Had the laws I refer to been passed when that book was written, there would never have been a depression nor would stock and bond holders have lost billions of dollars in the stock-market crash of 1929.

Mr. Speaker, as part of my remarks I include an editorial from the St. Louis Post-Dispatch and St. Louis Star-Times. The editorials follow:

[From the St. Louis Post Dispatch of October 6, 1941]

MASTERPIECE OF PUBLIC SERVICE

If a young lawyer, just admitted to the bar, should seek an example for his career in the legal profession, where would he find a better model than Louis D. Brandeis?

Justice Brandeis, who died last night, ripe in years and full of honors, had the humble beginning that any lawyer might have had. He started in 1878 at the bottom rung—as it happens, as assistant to James Taussig, of St. Louis, at 505 Chestnut Street, a stone's throw from the Old Courthouse. Later he rose brilliantly in the bar of Boston. Legal skill and unending industry brought him important cases and handsome fees. He could have been content with a large fortune and a life of comparative ease as a lawyer's lawyer and consultant.

Yet he was not. He became, as no lawyer before him, an advocate for the people, the great unorganized mass of ordinary citizens who so often went unrepresented when their interests were at stake in court proceedings, public hearings, and legislative bodies. When the Dingley tariff was before the House Ways and Means Committee of McKinley's time, Louis Brandeis, with no more credentials than his intense belief in democracy, appeared to testify.

"Whom do you represent?" the chairman asked.

"I represent the consumer," came the reply.

The laughter of the committee echoed in headlines and "pert paragraphs," but the young lawyer spoke only the truth. He did represent the consumer—he represented him on that occasion and many times thereafter. He represented the consumer in his battles for better living and working conditions, in his furtherance of trade unionism, in his many services as a mediator of labor disputes, his probing of financial, utility, and railroad schemes. Had he done no more than fight the lone but successful battle for mutual savings-bank life insurance in Massachusetts a generation ago, that achievement in itself—safe low-cost insurance for working people—would have earned him a lasting place in the record of American social progress.

It was this career for the consumer, for ordinary men and women, who could hire no great-name lawyers, which caused the great storm of protest among the vested interests when Woodrow Wilson nominated Louis Brandeis to the United States Supreme Court in 1916. It is impossible now to recapture the bitterness of that fight. Seven past presidents of the American Bar Association found it their painful duty to declare him unfit for a seat on the highest bench. Among those who so testified were William Howard Taft, Elihu Root, and President Lowell of Harvard.

From January until June the battle raged, but the Wilson of the New Freedom knew why he had chosen Louis Brandeis and he stood by his nominee without flinching. In the end, 22 Senators voted against confirmation, and many of them, like Borah of Idaho, would have been glad in later years to have expunged their share in that partisan record.

Justice Brandeis' contributions to our constitutional law were many and great. Yet they derived from very simple views of our Federal system. He found in the Constitution an ample charter for our changing needs. He

joined with Justice Holmes in allowing the States wide experimentation in coping with the essentially economic problems raised by new trends in ways of living and working.

He never stopped refining his own views as new information came to his hand; he believed and profoundly practiced that "your opinion is no better than your information." He stood as stanchly as any man for the right of free expression. And when narrow minds sought to stay legislative response to new forces, he said, "If we would guide by the light of reason, we must let our minds be bold."

The success of this open mind is written in changed business practices, in now accepted regulation of corporate enterprise, in the United States Supreme Court reports from 1916 until this very day, when his late associates, led by Chief Justice Stone, bow in his memory as another term opens.

For many a view Justice Brandeis expressed in dissent is today the law of the land. Indeed, there were times when not even Holmes stood with him, as for example when Justice Brandeis first argued for Federal taxation of personal income derived from lands leased by States to private operators. But by slow progress through the years he was able to do what he said early he would like to do, amend, not the Constitution, "but men's social and economic ideals."

The strength of American democracy lies in men like Louis Dembitz Brandeis.

[From the St. Louis Star-Times of October 7, 1941]

THE FAITH OF LOUIS BRANDEIS

Where shall we find the key to the character of Louis Dembitz Brandeis, who died Sunday night after a long lifetime ar rich in productive achievement for democracy as that of any American this era can remember?

It was not his intellectual capacity, though Brandeis revealed himself in his judicial opinions as a scholar of the law and though his search for knowledge was avid and unending. Other men, who at heart were mere snobs, have possessed equal or superior intellectual ability.

It was not his courage, either physical or spiritual, though tidal waves of criticism beat about his head on many occasions before he had lived long enough to become respected and cherished. Other human beings have bravely faced social disapproval, and some have even paid the death penalty for their temerity, without quite reaching the level of Brandeis.

It was not his radicalism—though Brandeis uttered criticisms of vicious corporate malpractices and the manipulation of other people's money which, coming from a Supreme Court Justice, made the turgid corporation baiting of professional radicals look pale and vapid.

And assuredly it was not a habit and custom of dissent, a maudlin, contrary, perverse antagonism to the status quo or to the majority. Brandeis, though circumstances forced him for many years into a dissenting role, was a man of great affirmative faiths. He believed in moral law. He believed in liberty—that shining thing which too many are so easily persuaded to trade for some mess of pottage. He believed, deeply and passionately, in the dignity and the rights of ordinary human beings. He believed in many such simple verities, which less great-souled men timidly hesitate to acknowledge.

Here, indeed, we touch the underlying faith of Louis Brandeis, the basic impulse which motivated his conduct. He believed in man. He believed in democracy. Like some other Americans one can remember—like Lincoln, for one, and a certain few poets—he gave actual faith and credit to the high principles of the Declaration of Independence and the Constitution.

And in these beliefs his career unfolded. Because of them he turned his back on the life of a successful, wealthy corporation lawyer which was wide open before him in his young manhood. Because of them he fought for "the consumer" against special interests. Because of them he braved the enmity of the rich and powerful. And when he rose to the Supreme Court—in an appointment to the everlasting credit of Woodrow Wilson—the trappings and comfort and exalted security of his position worked no evil in his heart.

He still trusted the people, so he dissented from narrow legalistic interpretations which would have made the Constitution a crabbed and constricting influence on this generation. He still respected individual rights and he protected the victims of racial and class prejudice. He spoke often for the rights of free speech and free assembly. He had no doubts for our future so long as we preserved our independence of mind and our willingness to experiment boldly, and it is characteristic that one of his philanthropies was an obscure little "radical" labor college in Arkansas which the authorities of that sovereign State saw fit only to persecute.

If American democracy is still vital and strong to face its new problems, Brandeis, with his incorruptible faith in the people, helped make it so. And it is to the credit of our democracy that it cradled Brandeis, and gave him place, and took him at last to its heart.

The New Farm Program and Human-Labor Hours

EXTENSION OF REMARKS

OF

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

COMMUNICATION TO THE SEVENTY-SEVENTH CONGRESS BY MR. O. F. BLEDSOE, PRESIDENT, STAPLE COTTON COOPERATIVE ASSOCIATION

Mr. WHITTINGTON. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following communication from my friend and neighbor, Mr. O. F. Bledsoe, president of the Staple Cotton Cooperative Association, of Greenwood, Miss., a successful grower and a successful seller of cotton, who has devoted much time and thought to an unselfish solution of the cotton problem, entitled "The New Farm Program and Human-Labor Hours," to wit:

THE NEW FARM PROGRAM AND HUMAN-LABOR HOURS

OCTOBER 1941.

To the Seventy-seventh Congress of the United States of America:

The human-labor hour is the foundation of all wealth. It performs a dual function of production and consumption. These God-given rights should be carefully safeguarded and equitably administered by our Government to maintain our democracy.

The cotton plant, the South's gift from God, should be cherished, nourished, and glorified, for it consumes the greatest volume of human-labor hours of any product of our country's soil. Our first farm program converted 15,000,000 acres of cotton, consuming 85 human-labor hours per acre, into oats and hay that consume 15 human-labor hours per acre. This loss of 70 human-labor hours per acre on 15,000,000 acres produced a total loss of over 1,000,000,000 human-labor hours. This tremendous economic loss was absorbed by the W. P. A. and the remaining cotton acres.

Now comes the new farm program for cotton with a proposal for another 3,000,000-acre voluntary reduction of the cotton-acreage quota, and an added loss of 210,000,000 more human-labor hours, making a grand total of 1,260,000,000 human-labor hours, with no provision for productive work for these unfortunate people. We shall ask the Seventy-seventh Congress of the United States of America to carefully consider the trend of this continuous pressure for reduction of the limited employment of this type of labor.

Should the great labor-consuming cotton plant be treated in this manner because it produces ample, and more than ample, fiber to clothe the small percent of the world's population that inhabits this political subdivision which proclaims a sanctified role with its neighbors? Would this program be a sound economic proposal if the cotton South was south of the Rio Grande?

If the intention of the Department of Agriculture is to reduce the cotton South to domestic fiber consumption, then the sound and direct economic procedure would be to select the best 10,000,000 acres of cotton land which would produce ample fiber for domestic consumption. Instead of continuous agony, accentuated with barbs of derision and scorn, this major operation would produce a loss of 70 human-labor hours on 30,000,000 acres, or a grand total of over 2,000,000,000 human-labor hours. How will the United States Department of Agriculture provide work to consume this tremendous volume of this type of labor? We will have to feed them out of the United States Treasury or export our surplus lint cotton so they can earn a decent living at their natural calling. I respectfully call your attention to the Bankhead-Eastland bill that is a fair arrangement for providing export subsidies from import duties.

The most wonderful feature of the cotton plant is that it produces 2 pounds of food and feed to 1 pound of fiber. The linters from the cottonseed provide the powder for a shooting war, while the meal and hulls provide feed for the dairy cow producing necessary milk and butter, and the cottonseed oil assists the dairy cow with an excellent cheap spread to help out the butterfat, as well as frying fat and soap stock.

The present price of human-labor hours as related to the price of cotton and cottonseed, based on published reports of the United States Department of Agriculture, are approximately as follows:

1. Average yield of lint cotton per acre, pounds	250
2. Average yield of cottonseed per acre, pounds	500
3. Average number of human-labor hours per acre	85
4. One human-labor hour produces:	
Lint cotton, pounds	3
Cottonseed, do	6
5. Parity price (approximately), cents	17
6. Average price of cottonseed (approximately) (per ton)	$50
7. Fertilizer and soil-building crops per pound of cotton, cents	1
8. Parity price less fertilizer and soil building, cents	16
	Cents
One human-labor hour produces 3 pounds of lint cotton at 16 cents	48
Plus 6 pounds of cottonseed, less ginning, at 2 cents per pound	12
Total returns per human-labor hour	60
Labor's share is 50 percent, or rate per hour	30

A single family, limited by conditions of Nature to working 12 acres of cotton and producing 6 bales, would expend 1,020 human-labor hours at 30 cents, making a cash income of $306.

O. F. BLEDSOE.

Tennessee's Part in National Defense

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

RADIO ADDRESS OF HON. ESTES KEFAUVER, OF TENNESSEE

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include a radio address delivered over station WINX in Washington on October 7, entitled "Tennessee's Part in National Defense." The program was sponsored by the Tennessee State Society:

Whenever the United States is imperiled, Tennessee stands ready to do its share. The raging world-wide conflict that Hitler started more than 2 years ago has long since reached the southern highlands and fertile regions of Tennessee and has found its challenge met by a people unafraid. Tennesseans have ever been lovers of freedom and liberty. And in the face of this latest threat to the American way, by ruthless international brigands, the State of Tennessee has offered to the Nation its complete services unreserved, with a spiritual fervor commensurate with its great God-given natural resources. Independence is a fetish here. To know that fact is but to know the history of Tennessee whose cognomen connotes the spirit which caused it to be called the Volunteer State. Within its boundaries, its rugged pioneer settlers in the Watauga Association as early as 1772 drafted the first constitution to be written and adopted by independent white Americans. No menace to this country's safety has found the ensuing summons to arms unheeded. Tennessee's sons have fought in all of the wars of the United States of America and the independence of Texas was espoused and won largely by transplanted Tennesseans and Kentuckians and Tennessee furnished a majority of the volunteers who fought in the Mexican War. As in history—so now. A dispatch from Drew Middleton, Associated Press War Correspondent, in Reykjavik, Iceland, states, "A regiment of seasoned soldiers recruited from the factories and farms of Ohio, Tennessee, and Kentucky and with a history studded with battle honors from Bull Run to the Argonne, forms a prominent part of the American fighting force on Iceland." Once again then true to tradition, Tennesseans mount the bastions of Americans' farthest outposts of national defense.

Warfare is no longer a matter of superiority of manpower alone, but a gigantic struggle among economic forces. Competitive industrial development demands huge natural resources. A vast reservoir of materials active and latent are available in Tennessee, long recognized for the richness of its mineral resources. More than 70 minerals and chemicals, a larger variety than is to be found in any other Southern State, are produced in Tennessee. Not more than a half dozen States in the Union have a greater number. They range the field from ever-needed coal, marble, and phosphate to the much-emphasized strategic minerals, such as copper and manganese.

Tennessee is wonderfully blessed with water. Indeed, it has been estimated that there are from 25,000 to 30,000 miles of rivers and streams in the State—more than enough to reach around the world. The Tennessee and Cumberland Rivers are, economically, among the most important rivers in the United States. With their major tributaries they form systems of waterways which nearly cover the entire State.

To the region traversed by the rivers of Tennessee has come a giant, girded for war. The giant is the Tennessee Valley Authority, which, in addition to its established program of navigation and flood control, supplies the electric power essential and vital to our industrial machine for national defense. Born in the shadow of the first World War, the T. V. A. now gears its mighty dam-building, soil-saving, electricity-producing operations to the needs of the present emergency. An integrated unit of many dams working as a single system for power, navigation, and flood control is envisaged, but just now the emphasis is primarily on power. The power market in the Tennessee Valley 8 years ago was using only a fourth of the present installed capacity, but even the present capacity may be doubled within another 3 years. Power and still more power is now recognized as the key to national defense. To be sure the essentials of the conservation and fertilizer program are still being carried on, but it has been tersely pointed out that the Tennessee River and its tributaries are primarily at this moment a line of battle—and such is the nature of modern war that this is no figure of speech but a statement of cold fact. R. L. Duffus in a recent article in the New York Times succinctly described the scene in the Tennessee Valley.

"The war machines are hungry. They will eat all the power there is and clamor for more. They can be built faster than the dams and generators that feed them. It is no longer a question of public versus private power, of waterpower versus steam—it is a question of power alone. The water behind the high dams is more than liquid gold. It is liquid aluminum, magnesium, rubber, high explosives, tanks. First and foremost, it is bombers. Out of this valley must come, in substance, a good part of the air-borne fleets that may strike down Hitler. * * *

"The river is at war, even though the Nation, in the legal sense of the word, is not. A desperate energy has seized upon the valley. If electric power is wings, it is time that makes them precious.

"The valley throbs with the beat of those mighty wings, of ore not yet refined, of metal not yet cast or rolled. Destiny moves upon the green and brown of falling water.

"It is with this sense of wings hovering and swooping—the wings of bombers, the wings of death, the wings of fate—that one watches T. V. A. at work and looks at the machine it feeds. What has to be done may be prose. Its significance is epic poetry."

Every section of the State is a contributor to the building of the arsenal within an arsenal of democracy. There is the Montsanto phosphorus plant at Columbia, the Wolf Creek ordnance plant near Milan, ferro-alloys plants, and the Volunteer ordnance plant to make TNT at Chattanooga, the gigantic Vultee airplane plant at Nashville, a General Motors plant making aircraft parts at Memphis, the large smokeless-powder plant at Memphis, the Aluminum Co. of America at Alcoa and Maryville, the Tennessee Copper Co. at Copperhill, the largest single sulfuric acid supply source in America, and other war industries too numerous to mention.

A map dotted with storage depots, artillery ranges, barrage-balloon training centers, and encampments like the great Camp Forrest cantonment at Tullahoma attests the realism of the military preparation being made for our defense.

Aviation, one of the deadliest phases of current warfare, has not been neglected. The pound of beating propellers and the whir of wings have told a dramatic story in Tennessee in the past few years. The progress of flying in Tennessee has been a real success story. In 1929 the State had only 3 airports. At present it boasts 23 airports, either already modern, up-to-date, and able to meet all requirements of their respective fields or else being rapidly made that way. There are airports at Chattanooga, Clarksville, Cookeville, Dyersburg, Fayetteville, Gallatin, Jackson, Nashville, Knoxville, Memphis, Tullahoma, and others along with innumerable intermediate landing fields, private and Army air fields and numerous landing strips. Tennessee has shown fine foresight in sponsoring instruction in gliding and has placed itself in the forefront of this important new movement in the Nation's program of aviation for defense. The Tennessee Bureau of Aeronautics has pioneered with its new school in gliding and soaring training, the first in the country sponsored by any government unit. And the spread of gliding instruction, expected as the United States profits by the Nazi experience in the value of this type of training will find Tennessee already in service in this field. To those tangibles of manpower and natural and industrial resources must be added in times of national stress, great leadership. Here neither is Tennessee lacking. In the shades of Jackson, Polk, Johnson, walks that great Tennessean who has contributed so largely to the formation of the foreign policies which have so ably steered the United States through the treacherous seas of international discord.

A host of native sons of the Volunteer State are carrying on in posts of leadership. No résumé of leaders would be complete which omitted the name of the distinguished senior Senator from Tennessee, the Honorable KENNETH D. MCKELLAR, whose dauntless courage is at this very time finding expression on the floor of the Senate in an effort to repeal those laws which are not in accord with the avowed determination of the American people in their international dealings. His service to his State is a living example to those Tennesseans in many high places who are emulating the heroic deeds of their hardy ancestors.

And so from the fertile soil in which it is embedded, to the mighty rivers that course its veins from its lowlands to its mountain tops; from the lofty Appalachians to the banks of the mighty Mississippi comes the unisoned voice of a Tennessee dedicated anew to the tasks of national defense.

Let's Have Economy and Honesty in the Defense Program

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

ARTICLE BY I. F. STONE

Mr. PIERCE. Mr. Speaker, future historians will see clearly that, in these dangerous days of the onrush of the powerful and seemingly irresistible Nazi war machine, our Nation has been twice put

in jeopardy—first from the Hitler menace, second from those in our Government who have the power and the will to bend the defense program to a pattern which allows great financial and other returns to a privileged few.

Some of the men who are appealing to the public for an all-out defense effort appear to be deeply concerned, in private, to protect monopoly rather than to guard the interests of the public. Acts of this Congress have made it possible for them to hazard our financial soundness and our whole economic structure, as well as an important part of the defense program, in a poker game played for tremendous stakes. They are actually gambling with our safety, destroying national confidence, and undermining the morale of private citizens, as well as of those young men selected to defend the system which made them possible, and protects them.

Every Congressman is currently receiving many propaganda letters demanding economy in our nondefense budget. Why should we not expect ordinary vigilance, honesty, and economy in defense expenditures as well? Any who would use a national emergency for private profit or power or aggrandizement are traitors to our national cause. The location of aluminum plants in the Northwest has been made without due economy and with millions of dollars of unjustifiable costs—and with wicked delays, and unnecessary use of strategic materials.

We are in grave danger from foes from without who know our internal weaknesses, and they are sweeping toward the lands of this hemisphere and toward the seas which we call our frontiers. We must put a stop to every individual and every group endangering our national strength and unity by plundering, through defense contracts, or wasting our resources through ignorance or gross carelessness. We have men of integrity and ability whom we can trust. We must insist that the great responsibility is put into their hands. We must rid ourselves of those who are preying upon us in our all-out effort to aid those nations which are meeting the onslaught while we are spared.

I have frequently called the attention of this House to the shortage in aluminum, especially as connected with the need for electric power, which is supplied so cheaply in the Pacific Northwest. On Tuesday of this week, October 7, I made a statement in the CONGRESSIONAL RECORD in regard to the Aluminum Co. contract negotiated for the Government by the R. F. C. I have called attention to the investigations of the Truman committee in connection with this contract. The terms of the contract, the inexcusable delay in arranging for the manufacture of aluminum, and the very apparent willingness to make that aluminum costly to the Government are matters which should concern every Member of Congress.

The obtainable facts seem to indicate that a great monopoly, the Aluminum Co. of America, does not want to make cheap aluminum, which would thereby compete with their own more expensive output in plants where power costs are higher. Our agents in our defense program have given them the right and the privilege of fixing the prices of aluminum. As indisputable evidence there is the contract already signed and entered into, a contract drawn by Alcoa's attorney and nursed along by Alcoa's agents and officials in O. P. M. Senator TRUMAN, in his press statement, suggested that the contract should be abrogated. Possibly a public burning would be a more wholesome and salutary procedure. Something must be done to restore confidence. Before any action can be taken all the facts must be made known.

On Tuesday I inserted in the RECORD, with the permission of this House, the second article of Mr. I. F. Stone's very careful and informative series which has been running in the New York Nation. I now ask permission to insert the first one of those articles entitled "Making Defense Safe for Alcoa," which appeared in the September 27 issue of the Nation. This correspondent has done a very fine piece of work which is a valuable contribution to our knowledge of the conduct of the defense program.

[From the Nation of September 27, 1941]

MAKING DEFENSE SAFE FOR ALCOA

(By I. F. Stone)

WASHINGTON, September 19.—Last Monday the Truman committee, a Senate committee investigating the defense program, heard two witnesses. One was Jesse Jones. The other was Arthur H. Bunker, executive vice president of the Lehman Corporation, now Chief of the Aluminum and Magnesium Section in the Materials Division of the O. P. M. Both were unwilling witnesses. The story drawn from them, painfully and piecemeal, was a sensational story and an important story, for it dealt with aluminum. Without enough aluminum we cannot make enough planes, and without enough planes we can neither help the British and the Russians to survive nor defend ourselves in the event of their defeat.

Some important stories are dull stories—full of statistics and complicated facts. "Pig iron" we used to call them. The story developed by the Truman committee hearing was hardly dull. The testimony showed that (1) Bunker, the dollar-a-year man in charge of aluminum and magnesium, is still drawing his $60,000-a-year salary from Lehman Corporation, which owns stock in the Aluminum Co. of America and its sister corporation, Aluminum Ltd., of Canada; (2) after 4 months not a shovelful of dirt has been turned on the 600,000,000-pound aluminum expansion program announced by the O. P. M. last May; (3) the first contract to be signed under that program obligates the Government to spend $52,000,000 to finance new alumina and aluminum plants but leaves the Aluminum Co. of America to build these plants when it chooses and to operate them as it pleases; (4) this one-sided contract was negotiated by Jesse Jones, who can be the country's most hard-boiled horse trader in dealing with some small businessman or municipality; (5) Jones signed the contract 2 days after the receipt of a letter from Secretary of the Interior Ickes protesting that the contract was unfair to the Government and contrary to the public interest, and ought not to be signed; (6) Jones testified that the contract was written "in the first instance" by "Mr. Cliff Durr, our General Counsel," but a moment later Durr was forced to admit that the first draft was written by Oscar Ewing, counsel for the Aluminum Co. of America. I can add, as my own contribution to this story, that there was very little difference between the first draft of that contract and the last, and that Ewing is not only one of Alcoa's principal attorneys and local lobbyists but also vice chairman of the Democratic National Committee. At this point the Truman committee pulled its punches.

I went over the contract between Alcoa and Jesse Jones last week end and mentioned it in last week's letter because I was naive enough to think the press could hardly ignore the story and would squeeze all the juice out of it before a weekly could get around to covering it. I saw eight or nine newspapermen at the committee hearing on Monday, and I see a good many papers every day, but the only place I saw the story printed was in the Baltimore Sun, which ran a short Associated Press account. Until yesterday the only clipping the Truman committee had received on the hearing was from the Baltimore Sun. The Ewing angle is political dynamite, but the Republican Herald Tribune in New York charitably overlooked it. The New York Times, which is for all-out aid to Britain, seems to have failed to see the connection between aluminum and planes. It does not hate Hitler less; perhaps it merely loves Alcoa more. The Washington papers kept mum on the story, although the Washington Post on Monday ran a rewrite of an A. P. dispatch, saying that Jones would be put on the griddle by the Truman committee.

I think the silence of the press on the matter is as shocking as the inactivity of the O. P. M. Together they present Mussolini with a fine example of what he calls a "plutodemocracy." They show how little the real controls of the defense program have been changed behind all the recent scene-shifting and shake-ups. This is the kind of thing that rots empires and prepares defeats, and it is time that Mr. Roosevelt woke up to what is going on in his own defense household instead of continuing the grandiose farce by which a Stettinius—more responsible than any other man for the delay in expanding aluminum production—is placed in charge of speeding up the lend-lease program.

The darkest aspect of this aluminum story is its one bright spot. When William L. Batt appeared before the Truman committee last May 12, he was able to show by some strenuous arithmetic that the present production of aluminum plus the expansion planned would be just enough by the spring of 1942 to take care of our "direct" military needs. The new bomber programs—which remain headline hashish without aluminum—have since increased those direct military needs for the light metal. Four months have been lost, and the only contract signed covers but half the expansion planned. The new aluminum-producing facilities will not be ready by next spring. I learned from Truman committee investigators, however, that the consequences will not be as serious as might have been expected because the lag in aircraft production is greater than the lag in aluminum production. Aircraft production is now expected to hit its full stride by December of 1942 instead of next spring, and aluminum planning is in terms of the winter and spring of 1942–43.

Judging from the testimony last Monday and the contract, what we have to begin worrying about now is whether present expansion plans will materialize in time to take care of expanded plane production in the winter and spring of 1942–43. Unless Alcoa's grip on the O. P. M. and the R. F. C. is loosened, I do not think we will get that aluminum in time. The contract with Alcoa provides for four new plants. One is for alumina, the intermediate product from which aluminum is made. This plant, to be erected in Arkansas, will supply 400,000,000 pounds of alumina a year, or enough to make only an additional 200,000,000 pounds of aluminum. The three other plants are

aluminum plants, one with a capacity of 150,000,000 pounds a year, to be built near Massena, N. Y.; the second, with a 90-000,000-pound capacity, to be constructed "adjacent to deep water" in Washington or Oregon; the third, with a capacity of 100,-000,000 pounds, to be set up in Arkansas. That is a total of 340,000,000 pounds of aluminum. No contracts have yet been signed for the rest of the 600,000,000-pound expansion promised in May, or for the additional alumina required to produce the aluminum, or for the additional fabrication facilities necessary. Aluminum ingots don't fly.

The contract is full of loopholes that lawyers will appreciate. No time is fixed for completion of the plants, and there is, of course, no penalty clause. Alcoa merely agrees to "use its best endeavors" to obtain the land necessary for construction of the plants, and it is doubtful whether the sites have yet been picked. The best Jones could say was, "I think the site at Massena, N. Y., has been picked. I am not certain about Arkansas. I think the site for the Northwest plant has been picked." Alcoa agrees to prepare plans, and if the plans are approved by the Government, to complete the work "as soon as practicable." Jones said it was his recollection that Alcoa thought it would have the plants ready in less than a year's time. When Hugh Fulton, counsel to the committee, asked him why that wasn't put into the contract with a penalty clause attached, Jones said, "I can't tell you." Jones' testimony is a lexicographer's nightmare. At one point he interpreted the word "shall" in the contract as meaning "maybe," and at another he said "or" meant the same as "both." In the construction of the plants Alcoa is not obligated to exercise "good faith and reasonable care," the usual formula, but "good faith or that degree of care which they normally exercise in the conduct of Alcoa's business." The nonlawyer reader may take my word for it that the second clause would make proof of negligence, much less bad faith, very difficult. Fulton wanted to know why the term "reasonable care" wasn't used instead and why the contract said "or" instead of "and." I quote from the record:

"JONES. I don't agree with you that 'or' means one or the other. 'Or' means 'both.'

"FULTON. 'Or' means 'both'?

"JONES. Certainly."

Aluminum is made from alumina and alumina from bauxite. Ninety percent of the country's high-grade bauxite, the only kind being used, is controlled by Alcoa. After the bauxite is purchased, on Alcoa's terms, the Government will still have to ask Alcoa's permission to make alumina from it in the Government's own alumina plant. The contract says, "When the alumina plant is completed, the production of alumina therein shall be at such rates within its capacity and for such periods as shall be agreed upon from time to time by Defense [Plant] Corporation and Alcoa." Fulton asked Jones, "Suppose Alcoa tells you it doesn't agree that that plant should be operated, even though you have a good many millions of Government money in it? I don't quite see under this contract how you could require it to be operated."

"JONES. I suspect you could if you were to try.

"FULTON. Under what provision of the contract?

"JONES. You could do it without a contract. * * *

"FULTON. Why sign a contract where they have a right such as that, Mr. Jones, when you have no right to control and operate the plant? Why not insert a provision authorizing you to operate the plant if they don't want to?

"JONES. I think we are fully protected."

Under the contract, after Alcoa has permitted alumina to be produced in the Government plant, the Government cannot use its own alumina to make aluminum in its own aluminum plants except at a price satisfactory to Alcoa. If any alumina is left over, which could be made available to other manufacturers of aluminum, it cannot be sold except on terms satisfactory to Alcoa. Alcoa gets a 5-year lease on the aluminum plants. The lease begins either 7 years from the execution of the contract or whenever production reaches 80 percent of capacity, whichever is earlier. This allows 2 years for construction of the plants. Once they are in operation, production in the Government-owned plants is to be at the same rate as in Alcoa's plants, and under the contract the Government cannot cancel the lease unless production is restricted to less than 40 percent of capacity. I am going to tell some more about this extraordinary contract and its equally extraordinary companion contracts with the Canadian Aluminum Co. next week. In the meantime I wish some Senator would have the courage to ask Jesse Jones whether this contract was written to defend the United States or the Aluminum Co. of America.

The Indispensable Quality of Highways to the National Defense

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

ADDRESS OF HON. THOMAS H. MACDONALD, COMMISSIONER OF PUBLIC ROADS

Mr. CARTWRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered on September 29, 1941, by Hon. Thomas H. MacDonald, Commissioner of the Public Roads Administration at the twenty-seventh annual meeting of the American Association of State Highway Officials at Detroit, Mich., on the indispensable quality of highways to the national defense.

Commissioner MacDonald's address was as follows:

In the June 1941 issue of Current History and Forum, Mr. Frederic Sondern, Jr., former foreign correspondent in Germany, has rendered a great service for all of us in this country. He has disclosed the factual background, and step by step described first, the development of the conception of Germany as the dominant world power, and in sequence the building of a vast organization for planning and for gathering data as a basis for the planning through world-wide espionage, in addition to those official representatives generally accepted in good faith by and between all nations. With the background now supplied we should be prepared to accept without shock any disclosures of espionage. And we have the knowledge of just why events have shaped themselves as they have. The following is quoted from Mr. Sondern:

"For the fourth time in 20 months Germany has rolled its forces irresistibly against the weakest points of its opponents' defenses at exactly the right moment. No army has ever been so precisely led, so effectively directed, or had the way so thoroughly prepared for its advance with propaganda, political sabotage, and economic pressure.

"The development of this formula of destruction and the split-second timing which has sent the Nazi juggernaut rolling across Europe without serious hindrance is the work of one man.

"Maj. Gen. Prof. Dr. Karl Haushofer and his Geo-Political Institute in Munich with its 1,000 scientists, technicians, and spies are almost unknown to the public, even in the Reich. But their ideas, their charts, maps, statistics, information, and plans have dictated Hitler's moves from the very beginning.

"Here is an organization for conquest, a machine for scientific planning, which no conqueror before Hitler ever had at his command."

The resulting coldly calculated, scientific methods for world conquest integrating motor-powered equipment on the highways and in the air is accurately reported in a June 1941 memorandum by Lt. Col. Lacey V. Murrow, former State highway commissioner of the State of Washington. Colonel Murrow was temporarily released by the Army Air Corps, at the request of the Federal Works Administrator, to go to England for the purpose of observing the demands upon highway services and the relationships between air services and highways which have grown out of the titanic European war operations. The following is quoted:

"RAPID FLEXIBLE TRANSPORT CHIEF FACTOR IN THE NEW FORM OF WARFARE

"Adequate modern transportation has proven to be one of the greatest single factors in present offensive or defensive warfare. In all of the campaigns in which the German Army has thus far been engaged, rapid transportation facilities have been of the greatest importance. Perhaps in no single instance was this fact more clearly demonstrated than in the battle of France.

"Discussions with French, Belgian, and English officers, who participated in and observed the full extent of this operation, disclose two most interesting facts. The German Army made full use of the entire road net, and it has been stated that there was little or no cross-country movement of tanks or other mechanized units. Every detail as to the movement, supply, and maintenance of these mechanized units was carefully worked out in advance. Allied aerial observation reports indicate that there was never at any time confusion or congestion on the various portions of the road system that were being used by the advancing German Army.

"UNORGANIZED TRANSPORT A FATAL WEAKNESS IN FRANCE

"On the other hand, it was stated by the same officers that there was utter confusion insofar as traffic was concerned behind the Allied lines. After the break-through at Sudan, there was no semblance of order in the movement of either military or civilian traffic. There was apparently no successful attempt at segregation and no establishment of priorities for certain classes of traffic. Records on file in the British War Office describe road blocks in France extending for miles and lasting for many hours made up of all classes of refugee vehicles and all classes of military transport. It would appear that only behind the British-held sectors was there any semblance of order."

But this Nation is not engaged in war. The national effort is directed toward two great objectives, the mass production of matériel of war for ourselves and for those nations who are valiantly defending themselves from aggressor nations, and simultaneously the building and equipping of an adequate army and navy for our own protection.

We know we are facing two periods of crisis, the immediate future of a life-and-death struggle involving the nations of the world to an extent we cannot yet know, and

then, sooner or later, the aftermath of dislocated industry, unemployment, debts, and unprecedented, world-wide social and economic disaster.

It is only intelligent to accept that all this disruption in the life of the world, the momentum achieved first by the German Nazi political party, and now by the German war machine, have advanced from a street brawl in Munich to a domination of most of the countries of Central Europe as a climax of a decade of painstaking, scientific planning and production. These elements of German national policy have converted mechanical power and engineering invention, designed to free men from the tyranny of physical labor, into coordinated weapons to impose upon nation after nation, the tyranny of a dictator's fancy. No matter what we think of the ethics between nations that are violated, no matter how immeasurable the suffering, the destruction, the loss of economic and social independence of the conquered nations, the conditions exist. These are real and are to be faced. This places the problem of what to do, what attitude to take, squarely before every individual. In our particular capacities of highway officials the responsibility is greater than the average. With each one it is not a question of individual action. It is a matter of official attitude and leadership. The responsibility extends beyond the limits of a locality, even a State, and for each of us pertinently raises the question, What is my responsibility to the Nation as a whole? In this national crisis, what contribution can I, as a highway official, make that will advance the interests of the Nation?

The experience of the past few months has been illuminating. Since it became evident that the Nation was in danger, there has been generally a response from the highway officials in attitude and in action that glorifies the spirit of solidarity of the highway organizations in the service of the United States. The measure of this response is indicated by the facts.

Directly in the interest of national defense, a program has been launched consisting of work on the strategic network and on access road projects, which as of August 31, 1941, embraces a total of 6,105 miles of programmed and approved highways.

On the 78,000-mile strategic network, 1,159 miles have been completed at a total cost of nearly $29,000,000; 4,288 miles have been approved for construction to cost in excess of $172,000,000; and an additional 1,517 miles have been programmed to cost approximately $64,000,000. The total programmed and approved mileage of strategic network, 5,805 miles, is estimated to cost $236,606,000, of which $127,565,000 or 54 percent is to be paid with Federal-aid funds. The program on this system also includes 585 structures and work on grade crossings to the extent of 145 eliminations and 105 protections.

Approximately 300 miles of access road projects have been programmed and approved at a total cost of $26,478,000 on which the Federal share is about 57.5 percent or in excess of $15,000,000. Surveys also have been authorized or engineering supervision is being supplied on over 1,450 miles. This work includes 58 structures and grade-crossing work, comprising 13 eliminations and 10 protections.

In a few States—it may be accented, in a very few States—there has been a meager response. The theory advanced is that defense highways are a responsibility of the National Government. This attitude prompts the question, Whose nation is this? The very essence of our national philosophy pivots upon our individual willingness to sacrifice political and personal interests to advance the common good. In no other way can the democratic principles underlying our national life be preserved. Because of these principles men as individuals are free within the laws to choose their own course. As public officials, they must accept the limitation upon their official decisions that is dictated by the advancement of the common good. In the time of national distress there is no place for self-interest or partisan politics. The record is now in the course of being written.

What has been accomplished on our highways during the past year to meet the known deficiencies measured by defense needs has been through the generous cooperation of the State highway departments through adjusting their current programs and the directing of expenditures of State and Federal funds to this end. There is no doubt that Federal legislation will be enacted that will materially augment these efforts. This is certain. However, there is a growing responsibility for both State and Federal highway officials. This is to concentrate upon the program of action that will insure the adequacy of indispensable services that can only be rendered by the highways. Transportation of persons and commodities over the highway has become so interwoven with the fabric of the life of every individual and all industry that, like the air we breathe, it is accepted without conscious thought. Highway service has become indispensable to our national life in normal times and much more in times of national emergency.

The universal transportation fallacy is in thinking of the units that move, and not the combination of the units that move and the roadbeds over which they move. This is true of all forms of transportation.

No matter how well the motive power and car equipment of the railroads are managed, efficient rail transport is dependent upon the constant day-by-day maintenance, including betterment and replacement of roadbeds and bridges. No matter how advanced the design of airplanes, they are dependent upon adequate runways to get off the ground or to land with safety. It has certainly been well demonstrated there is nothing more helpless on the ground than an airplane. Their effectiveness for either defense or offense depends upon how rapidly they can be put into the air.

So with motor transport. Adequate highways and bridges and organized operation are fundamental to their utility, and this can become accented with accelerated swiftness in an emergency. In his report of May last to Maj. E. W. Ridings, the head of the Civil Defense Mission which was sent to England in March of this year, Mr. Frederick C. Horner, a member of the Mission, assigned to study transportation and public utilities, quotes the Chief Engineer of the British Ministry of Transport, Maj. F. C. Cook, a highly competent engineer of long service in this capacity, as follows:

"You must have alternate highway routes and you must plan now—ahead of the emergency—how you propose to use them. In England, no effort was made before the war to work out strategic roads because we never expected invasion. You should not make that same mistake.

"Give your highway engineers, who are experienced in these matters, full control of the highways, repairs, and maintenance of both bridges and carriageways. Let the military authorities, working in the closest cooperation with the highway engineers, make the plans, but wherever possible, even including the theatre of war, let the highway engineers do the work."

Conceding the differences between a nation heroically defending itself through months now lengthening into years, and a nation turning its whole energies and resources at a rapidly accelerating rate toward preparedness to defend itself and to render essential assistance to other nations, the statement of Major Cook concisely, authentically defines the place in the organized plan for effective action that can be best filled by the highway officials in the providing of adequate highway facilities. In the broader field of highway transport there must be complete coordination with the motor-vehicle administrators, with the State and local traffic control organizations, and the establishment of cooperation with and between all classes of road users.

The plans for the orderly, efficient use of highway transport have been progressing but the real effort is yet ahead. Probably the detailed knowledge that we have for quick reference of the condition and capacity of the highways of the Nation, particularly the more important routes, is unsurpassed. Just what needs to be done is not a matter of conjecture. The facts are known, and among other things we know there are many, many miles of highly important routes that for some time have been loaded beyond their reasonable capacity both as to tonnage and numbers of units. But the work ahead must incorporate more than the remedying of these defects. It must include the orderly planning and execution of a program that continues logically along lines already determined. The steps which have been taken to carry into operation a defense-highway program include many related yet widely differing activities. These are here reviewed.

1. DESIGNATION OF THE STRATEGIC NETWORK

Beginning in 1935, the State highway departments and the Public Roads Administration inaugurated cooperative State-wide highway planning surveys which have provided a complete inventory of the highway facilities of the Nation. The application and use of the information gained in these studies have proven of inestimable value in the defense effort now being made by this country. The study of events in Europe during the past 2 years emphasizes the importance of highway transportation to any successful defense or war effort, and requires a system of strategic highways, which, as the name implies, will afford continuity of movement over predetermined routes for military traffic.

The results obtained largely from the planning surveys have provided the basis for the final selection of a strategic network, in the making since 1922, composed of 78,000 miles of highway extending into all sections of the country, taking maximum advantage of existing facilities and affording the greatest opportunity for the unimpeded flow of traffic. Selected in collaboration with military authorities, and finally approved by the Secretary of War, the routes comprising the strategic network connect all major centers of population and are most highly correlated with traffic origins and destinations. The consideration of modernization to meet the needs of swiftly moving traffic in the shortest possible time has been paramount in the final selection of this network. Since that time the greatest possible emphasis has been placed on the necessity for the speedy correction of existing deficiencies, which from a military point of view are most critical.

2. ACCESS ROAD PROJECTS

The national-defense effort has created a Nation-wide situation analogous to a major industrial migration. Though an attempt has been made carefully to plan and coordinate the plant expansion essential to defense production and the facilities for defense transportation, nevertheless serious dislocations have been countenanced in the interest of speeding the effort. New and expanded industrial plants for the production of ordnance and aircraft items, and for shipbuilding, and the development of Air Corps training centers and replacement camps have all added to the need for the coordinate expansion of existing access roads and for the construction of many new access highway facilities. The improvement of access roads subscribes only to the general procedure of establishing particular requirements by surveys of individual cases, and of affording relief according to their relative urgency within the limitations of available funds.

As of September, there have been certified to the Public Roads Administration some 400 military, naval, and industrial areas for study. In these areas it is anticipated that the construction of 3,150 miles of access road costing $256,000,000 is indicated. In 220 military areas need is indicated for 2,410 miles of access road at a cost of $138,000,000. Some 70 naval areas presently require 340 miles of access road to cost $67,000,000, and in approximately 110 industrial areas 400 miles costing $50,000,000 are now indicated as necessary.

The importance of adequate access to and from plant and camp and major highway routes cannot be overemphasized. We cannot expect to move trained men and equipment out of camps and plants unless we move supplies and raw materials into them.

3. ALTERNATE AND AUXILIARY ROUTES FOR CIVILIAN DEFENSE

In England, the Ministry of Transport, in cooperation with the Ministry of Home Security and the military, have laid out a system of strategic and tactical highways. Considerable study has recently been given to the control and operation of this system. Although their strategic system is somewhat like our network, their control and operation are somewhat further advanced by reason of the urgency of their present situation. Military authorities can take full control at any time, including policing, and can exclude all civilian traffic.

In particularly vulnerable areas, carefully worked-out schemes provide for the evacuation of civilians over alternate roads not forming a part of the strategic or tactical system. Arrangements have been made for the civilian crossing of the strategic system by civilian traffic on the auxiliary routes with a minimum of interruption to the military movements. The provisioning of canteens in strategic areas has been worked out to facilitate the evacuation of civilians. The thoroughness with which this plan has been developed testifies to the close coordination of the Ministry of Transport, the Ministry of Home Security, the military and the civilian police

One of the next undertakings in which we feel certain of the full cooperation of the State highway departments is the planning of supplementary and alternate routes for civilian use and defense.

4. HIGHWAY MAINTENANCE BY REPLACEMENT PROGRAMS

It may be, perhaps paradoxically, stated that the complete highway system is never completed. Over a period of years, a series of construction projects are built up of various surface types designed to meet the requirements of variant traffic volumes and integrated into a system which provides continuity of traffic flow. At any interval in the development of a planned highway system, the relatively small project elements composing it express the complete range of service life, design standard, traffic adequacy, and degree of modernization.

In the dynamic advance toward system modernization adequate to the expanding volumes of highway transportation, maintenance is the only static element. Maintenance is properly the function of preserving the initial status of the constructed facilities; of protecting the assets created by construction during an economical period of service life. Thus, at all times, the variant ages of the project elements composing the highway system require varying degrees of maintenance expenditure to check the forces of depreciation and obsolescence. Maintenance, however, cannot indefinitely offset wear and tear, obsolescence, and traffic inadequacy, so that attempts to unduly prolong service life may result in exorbitant maintenance expense, which in turn may inhibit the replacement essential to economical traffic service.

Recent studies of special maintenance-cost sections in a number of States have revealed instances of maintenance cost exceeding 50 percent of all highway expenditure without contributing to essential modernization.

Continual replacement is therefore dictated by continual lapse of obsolete and inadequate projects into a category of uneconomical maintenance. Especially in the defense effort, the systematic and planned replacement of the weak links strained by the defense load is the best guaranty of sustained highway capacity equal to that effort.

It should be more generally understood that the highway programs that are most important now do not contemplate the building of new highways. The important—the essential—work is the replacement of facilities now in use that can no longer provide the required service.

5. PRIORITIES ON MATERIAL AND EQUIPMENT

Conferences between the Priorities Division of O. P. M., the Priorities Committee of the Army and Navy Munitions Board, and the Public Roads Administration resulted in an outline of policy governing the assignment of preference ratings to several categories of highway construction. This policy recognizes the prior defense importance of access road and strategic network construction, but is broad enough to cover all construction activities of the State highway departments.

To implement the policy a procedure has been established providing for the submission, through the Public Roads Administration, to the Office of Production Management, of applications requesting the assignment of preference ratings to groups of projects, appropriately classified. Preference rating orders issued to the State highway departments may be used to assure delivery of material and equipment to contractors.

Negotiations are now under way for the issuance of an order covering the maintenance activities of State and other highway departments.

6. HIGHWAY TRAFFIC ADVISORY COMMITTEE TO THE WAR DEPARTMENT

The War Department recognizes that the burden placed on highway transportation as a result of troop movements in connection with mobilization and training maneuvers, requires the scheduling of convoy movements and the advance planning of maneuvers so as to incur a minimum of interference with civilian pursuits. That Department also realizes that maximum facility of movement, with the least interference to civilian activity, cannot be obtained without the cooperation of civilian authorities in the various States. To effectuate such cooperation the Secretary of War has appointed a committee, designated as the Highway Traffic Advisory Committee to the War Department, composed of the heads of the national associations whose members will be directly concerned in three major problems:

1. Routing of troop and convoy movements.
2. Provision of civilian driver records.
3. Conduct of a Nation-wide bus and truck inventory.

The first problem will enlist the aid of the State police, the motor vehicle administrators, and the highway departments in assisting and routing convoy or other movements of military forces and equipment.

The second problem will require the assistance of the State motor vehicle administrators in connection with the Army's driver-training program.

The third problem will require the complete cooperation of the State motor vehicle administrators, highway planning survey representatives of the Public Roads Administration, the War Department, and the Work Projects Administration, in order to provide a complete list of truck and bus equipment which will be available for necessary emergency defense use.

It is intended that the national committee be a directing agency to coordinate the operation of similarly constituted subcommittees in the various States, appointed at the request of the Secretary of War, known as State highway traffic advisory committees and consisting of the chief of State police, who acts as liaison officer between the State committee, the Army, and the national committee; the State motor vehicle administrator; and the commissioner or chief engineer of highways. A series of recent meetings has resulted in the organization of the State committees into regional groups coextensive with the Army corps areas.

7. CENTRAL MOTOR TRANSPORTATION CUMMITTEE

It was inevitable that the defense effort would develop the need of plans for the efficient and economical use of highways and motor vehicles, and require machinery for the determination of highway-transportation needs, in order to assure an adequate supply of motortruck equipment. To meet these requirements and to advise on motortruck transportation problems, a Central Motor Transportation Committee was formed late in June by Mr. Ralph Budd, Transportation Commissioner, Office for Emergency Management.

The central committee is composed of the Interstate Commerce Commissioner in charge of the Bureau of Motor Carriers as chairman, the Commissioner of the Public Roads Administration, representatives of the Interstate Commerce Commission, organized and private trucking consultants to the Transportation Division, Office of Civilian Defense, National Grange, and for-hire and private truck operators. The central committee has authority to establish such subcommittees as may be deemed necessary.

With the central committee are 16 regional committees with headquarters in the field offices of the Motor Carrier Division of the Interstate Commerce Commission. Members represent the various types of carriers and include public members from the Highway Traffic Advisory Committee to the War Department and the Office of Civilian Defense.

Work of the central committee formed the basis for the issuance by O. P. M. of a program to facilitate the acquisition of material for the production of trucks and passenger carriers. This program, based on estimated requirements for 1,189,000 trucks during the 1942 model year, includes a limitation order which gives specific instructions as to the number and kind of trucks and allied products which can be made during a specified period. Also included is a limited preference rating order which extends a rating of A-3 for use in obtaining material for truck production to the extent provided. This is a typical blanket rating order and is extendible by producers to their suppliers.

8. COMMITTEE TO INVESTIGATE NONESSENTIAL FEDERAL EXPENDITURES

The Revenue Act of 1941 under Title VI, Section 601, established a committee to investigate Federal expenditures, to be composed of (1) three members of the Senate Committee on Finance and three members of the Senate Committee on Appropriations, to be appointed by the President of the Senate; (2) three members of the House Committee on Ways and Means and three members of the House Committee on Appropriations, to be appointed by the Speaker of the House of Representatives; and (3) the Secretary of the Treasury, and the Director of the Bureau of the Budget. The committee is charged with the duty of making a full and complete investigation and report, to the President and to the Congress, of all expenditures of the Federal Government with a view to recommending the elimination or reduction of those deemed nonessential. The committee is authorized to hold hearings, subpena witnesses and take testimony and also to utilize the services, information, facilities, and personnel of the departments and agencies of the Government.

The Public Roads Administration as the major Federal highway agency is prepared to

cooperate fully with this committee to establish the requirements for adequate highway transport and for the construction of new facilities essential to the defense effort.

A comparison of the requirements for defense and civil vehicles in 1941 with those of 1940 clearly demonstrates the increased burden which defense activity has superimposed on the highway systems of the country.

From 1940 to 1941, military and civil requirements for new trucks and busses increased by 205,000 vehicles.

In the same period, the number of military and civil vehicles in service increased by more than 294,000 units.

It is estimated that military vehicles traveled nearly eleven times farther in 1941 than in 1940 and that the bulk share of this travel was added to an already heavy load due to the increase of civil traffic following on the defense effort.

Based on the best available evidence, it is estimated that the total 1941 carried load on rural highways approaches 72 billion ton-miles. This is approximately 24 percent higher than the estimated total 1940 movement on rural highways.

A recent analysis of the distribution of average trip lengths of motortrucks operating on rural highways shows that 66.1 percent of all trips are under 25 miles; 13.1 percent are from 26 to 50 miles in length; 10.7 percent are from 51 to 100 miles; and 10.1 percent are over 101 miles. In view of the predominance of short trips by highway trucks as compared with the relatively longer trips involved in railroad haul, it appears that truck haul on the highways is essentially supplementary to, rather than competitive with, rail haul. It is highly possible that peak transport periods may produce a definite shortage of motortruck equipment

Recent large increases in traffic volume and extensive defense migration of large numbers of persons into strange surroundings operate to make imperative the provision of maximum protection to highway traffic, particularly at railroad grade crossings. Recent progress in the evaluation of relative accident hazard at grade crossings permits of obtaining the maximum of aggregate hazard elimination with a given sum of money.

SUMMARY

From a consideration of the foregoing description of the current demands on highway transport and of the procedures established to deal with the problems presented, it should be self-evident that:

First. Federal highway expenditures must be directed toward defense objectives and all other requirements must be subordinated thereto.

Second. Highway administrative agencies—national, State, and local—must be fully prepared to justify, as essential, the expenditures made for highway improvement.

Dr. Edward L. Israel

EXTENSION OF REMARKS

OF

HON. WILLIAM P. COLE, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

Mr. COLE of Maryland. Mr. Speaker, one of my distinguished constituents, Dr. Edward L. Israel, for more than 18 years rabbi of Har Sinai Congregation, has been chosen to lead the union of American Hebrew Congregations, a national organization with more than three-quarters of a century of service in the cause of liberal Judaism in America.

The acceptance of this offer necessitated Dr. Israel's removal from Baltimore to the new national headquarters of the Union in Washington, D. C. As might be expected on the departure from the community of so outstanding a civic leader, beloved by many within and without his congregation, there was a round of farewell meetings and parties in his honor.

As I looked over the group attending one of these gatherings, the realization came to me that this was not merely a well-deserved tribute of affection and esteem for an individual, but that the occasion had a higher significance. The atmosphere of the assembly in which I found myself impressed me with the uniqueness and greatness of America. Here was a rabbi who had been called to lead the Union of American Hebrew Congregations, the great organized expression of liberal Judaism in America. But this was not a sectarian occasion. Gathered to honor him were men of widely differing religious beliefs and political opinions—a Roman Catholic priest, the president of a Catholic college, leading Protestant ministers of the great city of Baltimore, and an outstanding group of laymen among whom I found Protestant, Catholic, and Jew. I could not but reflect that a meeting such as this could not take place in Nazi Germany, in Fascist Italy, in communistic Russia, or in any of the other countries which are now under totalitarian domination. Yet here was expressed in dramatic form the way of life that we have endeavored to build in America, and which is threatened by the forces of tyranny in the world today.

How much better and how much more worthy was the scene which I beheld that evening than those that are being enacted in other lands. In those unhappy places men of different creeds and races are divided by suspicions and hatreds; here they joined irrespective of creed in amity and good will to signalize the service rendered by a good citizen in the promotion of those virtues which are held in common esteem by all creeds. Voices have been raised that would bring disunity and ill-will into our midst; but I believe that the sound common sense and sense of decency of Americans will not incline them to heed appeals to racial and religious dissention and prejudice.

Again and again in the past few years we have witnessed the technique employed by the enemy to divide and destroy one country after another by sowing the seeds of bigotry. The technique is clear. It is merely to inflame one group against another, to bring internal strife and confusion, to divert attention from the evil designs of the real enemy. America is not oblivious to the lessons of experience. I hope it will not be led astray by false and inflammatory appeals.

As I reflected over the broadly representative character of those who had joined in comradeship to do honor to Rabbi Israel, I remembered that our President has correctly emphasized, that inherent within the forces of organized religion are those great ideals of human brotherhood which as democracy loving Americans we are striving to preserve. I am glad to have participated in the tribute to my friend, Dr. Israel, the new head of the Union of American Hebrew congregations. Cherished democratic traditions of this country will be maintained not by bitter divisions but my united effort of this and other religious organizations, and by the common loyalty of men of many races.

Dr. Israel, I hope, will meet many Members of Congress personally. His personality, sincerity, and entire make-up radiate confidence in any position he takes. There are ever recurring problems affecting his work which require men of his type and character. His race and the country are fortunate in having a man of his strong character and forceful approach assigned at this time to such an important work, with headquarters at the National's Capital.

President Writes His Endorsement of Dams and Arkansas Valley Authority

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

LETTER FROM THE PRESIDENT

Mr. ELLIS. Mr. Speaker, I have here a letter which I have just received from President Roosevelt, and which, with your permission, I read to the House:

THE WHITE HOUSE,
Washington, September 26, 1941.

Hon. CLYDE T. ELLIS,
House of Representatives,
Washington, D. C.

DEAR MR. ELLIS: In reply to your letter of September 23 in regard to the Arkansas Valley Authority bills, I want to assure you of my continued interest in the enactment of this legislation.

The value of such authorities in assuring defense power supply has been amply demonstrated during the past 2 years. I am glad that the White and Red Rivers projects, which in effect will form the nucleus of this Arkansas Valley regional program, are going ahead. Recent studies of the power requirements of the defense program indicate that they should be expedited.

I am also convinced that such authorities, based on full utilization of the resources of our river basins, can play a vital role in the eventual adjustment to a peacetime economy which the post-war world will require.

You are, of course, aware of the difficult problems involved in reconciling varying points of view toward this type of legislation. For this reason I am sure that you will appreciate the importance of the careful work which the Bureau of the Budget is doing in reaching a solution which will assure the expediting of these river-basin programs on the soundest possible basis. It would please me very much to see the enactment of the Arkansas Valley Authority at this session.

Sincerely yours,

FRANKLIN D. ROOSEVELT.

The President's Mother

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

POEM BY H. I. PHILLIPS

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by H. I. Phillips, from the Boston Daily Globe of September 10, 1941:

[From the Boston Daily Globe of September 10, 1941]

THE PRESIDENT'S MOTHER

(By H. I. Phillips)

She walked serenely through the far-flung years;
Within her the eternal mother shone;
God blest her in the treasured hills she loved
And kept her from declining years alone.

There was a certain something in her eyes—
A look so gallant, yet a little sad;
Devotion seemed forever dwelling there,
It was a look like this my mother had!

The spirit of another age was hers
An age of crinoline and candlelight.
A nation's stalwarts with her walked the stage
When ancient glories put today's to flight.

The tinkling music box, the flickering glow
Of oil lamps, and the sound of carriage wheels,
Torch light parades for chiefs long dead and gone,
The memory of waltz, gavotte, and reel.

Her life was linked with days of sailing ships—
With packet, stage coach, and the first steamboat—
A girlhood contact with the China trade,
In times when perils marked each day afloat.

A voyage on a clipper ship she knew
Around the Horn when but a girl of eight;
She'd seen Napoleon and smiled to watch
Empress Eugenie by a Paris gate.

As she looked out on Hyde Park's placid fields
Such shadows as she saw in silent joy!
Old friends long gone, in garden paths again—
Her husband, and, a child again, her boy!

The early years when lofty plans she made
To fit him for whatever might befall—
And, yes, the thought that every mother has—
Might fate decree him for a far, high call?

The sun it now makes elfin pools of light
Beneath the trees, and there again she sees
Him in a thousand phases, moods, and forms
To fill her heart with lovely memories.

That day she took her son to Washington
And Grover Cleveland took him by the hand.
What dream was hers to mark that distant day?
Ah, she alone could know and understand.

Those years when she beheld him stricken down—
And all high hopes seemed buried in the dust—
Her matchless faith, unfaltering, proclaimed,
"He will go on! I know he will! He must!"
As if she willed it so by that strong faith,
So dominant in mothers through the years,
He did go on—on to the cherished goal.
And, overjoyed, her eyes were damp with tears.

Three times she saw him take the solemn oath—
And listened to his words fall one by one;
But there amid the pomp and panoply
She merely saw a well-deserving son.

Stately and regal in her four-score years,
She was the valiant mother all sons know;
Even in death she seems but in a sleep,
Waiting to give him strength, her heart aglow.

Now in the Hudson's hills this lady rests
Amid the memories so rich and rare.
"Courage, my son!" he seems to hear her say—
And this, too, is a saddened Nation's prayer.

The Danger Confronting America

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

LETTER FROM HON. OTTOMAR KRUEGER, PRESIDENT OF CONCORDIA COLLEGE

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received today from the Honorable Ottomar Krueger, president of Concordia College, Fort Wayne, Ind.:

CONCORDIA COLLEGE,
Fort Wayne, Ind., October 8, 1941.

The Honorable GEORGE W. GILLIE,
House Office Building, Washington, D. C.

HONORABLE SIR: This letter is being written you by an individual American citizen who has for almost 50 years been exceedingly proud of his country, flag, and all of the traditional American ideals and who hopes and prays that he may continue to feel that same way during the remainder of his life. The letter is written to you as a representative of the American people and one to whom a great trust has been transferred. I hope that you will give this letter consideration and some study.

From all indications our country is being brought steadily but surely into another war which then may be designated as a World War, a war which has to do primarily with European nations and European ideals and philosophies of life. Our American tradition since the days of the founding fathers, particularly so since President George Washington, has been one of isolation and independence and one which expressly remained aloof from all European complications and quarrels. Once before we were led through much propagandizing to forsake our traditional ideals much to our sorrow, for we are laboring now under the aftermath of that first World War and have never completely recovered, especially not morally.

In this entire affair, the rank and file of the American citizenry has never been consulted, and by rather reliable polls it has been demonstrated repeatedly that from 80 to 83 percent of the people are opposed to our intervention in any European war although they may favor the strongest kind of home defense both in the Army and Navy. The 80 to 83 percent have declared over and over again to a man that they are willing to lay down their lives for the defense of their country, but they are not willing to shed any blood, their own nor other people's blood, for European entanglements and involvements.

In order to bring the United States to the brink of war and to create a certain warmindedness among the people, highly dictatorial powers have been used. The people have been kept in ignorance. Even our legislative bodies, elected by the people for purposes of safeguarding the rights of the United States have been ignored and a small coterie of people have shaped the tragic affairs as we now find them. All of this is certainly indicative of what the future may bring to our Nation and it is the best encouragement for all these factions and much malcontent among the people.

Certainly there will be a day of accounting for the actions of the United States Government, with the President in leadership, and that accounting will take on a double form, one the moral accounting which must be given for the lives of any American citizens lost through involvement in a European war. There is after all a God to whom even the kings of nations are responsible and likewise the authorities of our country. In the second place there will be an accounting in the political history and future development of our Nation. Who can guarantee what the outcome of this war will be, and who is there that is not afraid that the traditional democratic form of Government which we have enjoyed these many years will disappear at the close of this war. There are elements in our country today who would be willing at the incitation of certain leaders to overthrow the American Government. The Members of our Congress and Senate know this. You have people who speak openly of rebellion. Not long ago a letter appeared in one of our local newspapers in which the writer suggested that there should be a march on Washington. Communism and other isms are working day and night to undermine our American form of government. If now dictatorial measures are used to involve us in this war and to help other people who have never concerned themselves about our welfare, many of whom have done everything to hinder the development of the United States and our American way of life, will not these unruly and dissatisfied elements probably link together to do all in their power to bring about the downfall of our form of government when this entire affair is over? Millions of people believe that they are deliberately hoodwinked and betrayed, and such conditions do not bode well for the country.

I should like to encourage you as one elected by the people to represent our interests to do all in your power by way of opposition to our being urged and finally compelled into this war. I personally believe you owe it to your constituency.

Furthermore, as a father of a family and as an educator of youth, I should like to raise my voice in protest against this undermining of the Government of the people and the American form of government. Certainly I should like for my children and all of the young people with whom I am dealing daily to enjoy the same splendid liberties and inexpressible privileges that I have enjoyed in this my fatherland. I am one who realizes also that there is no other country in the world like unto ours and that nowhere else have people found such material bounty and happiness as here, and I should like to do all in my power to preserve all of these good things for the coming generations.

May the Lord grant our Government wisdom and courage to do that which is Godpleasing in this matter and which will in the end serve our Nation best, and may He hold His hand over us and preserve peace

unto our people, and may He preserve our American traditions.

I am,

Very sincerely yours,

OTTOMAR KRUEGER, *President.*

Price Control

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

RESOLUTION OF SUGARCANE ADVISORY COMMITTEE, LOUISIANA FARM BUREAU FEDERATION

Mr. SANDERS. Mr. Speaker, under leave to extend my remarks, I desire to place in the CONGRESSIONAL RECORD a resolution relative to price control that was unanimously adopted by the Sugarcane Advisory Committee of the Louisiana Farm Bureau Federation on September 25, 1941.

No issue now before the Congress is of more vital importance to the American people, and especially to the American farmers, than this problem of price control.

The membership of this committee is composed of leading and well-informed farmers. Their views on this vital topic, I am sure, will be of greatest interest to Members of the Congress.

The resolution in question reads as follows:

Whereas the executive committee of the American Farm Federation in session July 11-12, 1941, adopted a resolution having to do with price fixing, in which is embodied the following: "* * * representatives of the federation * * * should insist upon the adoption of a policy that no maximum price should be fixed on any agricultural commodity or product thereof which would result in a price of less than 110 percent of parity, by current periods * * *" and

Whereas farm bureau members and officials in session at Hot Springs, Ark., adopted a resolution, which reads in part "If it becomes necessary to impose ceilings, we insist that such ceilings be applied clear across the board upon industry, upon agriculture, and upon labor. * * * And we insist that no ceilings be placed upon farm prices at less than 110 percent of the parity price": Therefore be it

Resolved by the Sugar Cane Advisory Committee of the Louisiana Farm Bureau, That the recent action of Mr. Leon Henderson, Federal Price Administrator, in arbitrarily fixing the ceiling on raw sugar at 3.5 cents per pound without consulting the producers of sugarcane or sugar beets from which raw and refined sugar is made, is unfair and unjustified; and be it further

Resolved, That we do hereby call upon the Louisiana Farm Bureau and the executive committee of the American Farm Bureau Federation to vigorously protest the said action of Mr. Henderson and to use the means at their disposal to prevail upon Mr. Henderson to review his decision and call for facts and figures upon which to base a more fair determination; and be it further

Resolved, That we call attention to the dangerous probability that if the action of Mr. Henderson in setting a ceiling of 3.5 cents on raw sugar is allowed to go unchallenged, he may arbitrarily take upon himself to set ceilings on the prices of any and all agricultural products.

Resolved further, That copies of these resolutions be sent to the Louisiana delegation in Congress, President Ed. O'Neal, and Milton Tainter, secretary-manager at Baton Rouge.

Termination of Defense Contracts and Allotments Under Lease-Lend Appropriations

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

Mr. TABER. Mr. Speaker, the defense contracts all carry a clause which provides for termination in the event of the end of the war.

The following is a sample of the termination clauses:

Termination by the Government. The Government may terminate this contract at any time by giving the contractor 30 days' written notice of its intention so to do, and at the termination of such 30 days, or such longer period as may be specified in said notice, this contract shall be terminated, and shall be of no further force and effect, without prejudice, however, to the contractor's right to receive payments theretofore due.

If the contract is thus terminated, the contractor shall be entitled to payment for the work done by it under this contract up to the date of termination and for which the contractor has not theretofore been paid.

The President's order turning over to Edward R. Stettinius the power to make allotments under lease-lend appropriations is as follows:

THE WHITE HOUSE,
Washington, September 18, 1941.

Hon. E. R. STETTINIUS, JR.,
Lease-Lend Administrator.

MY DEAR MR. STETTINIUS: Pursuant to section 9 of the act of March 11, 1941, I authorize you, as Lend-Lease Administrator, or your designee, to allocate, after consultation with the Bureau of the Budget, up to the sum of $300,000,000 out of the Defense Aid Supplemental Appropriation Act, 1941, to various departments and agencies of the Government for the procurement of defense articles, information, and services, for administrative expenses, and for such other services and expenses as are necessary to carry out the purposes of the act of March 11, 1941; and to amend, alter, or revoke such allocations.

I further authorize you, or your designee, to transfer defense articles, information, and services up to the value of $300,000,000 to those nations whose defense I shall have found vital to the defense of the United States; to retransfer to such countries defense articles, information, and services heretofore or hereafter transferred; and to revoke, alter, or amend transfers and retransfers heretofore or hereafter made.

I further authorize you to increase or decrease quantities of defense articles, information, services, and expenses, or substitute other defense articles, information, services, and expenses in lieu thereof, within the aggregate amounts heretofore or hereafter allocated to each department or agency in section 1 (a), 1 (b), 1 (d), and 1 (e) of the Defense Aid Supplemental Appropriation Act, 1941.

I further authorize you to exercise any functions necessary to carry out the authorizations contained in the three preceding paragraphs.

I would very much appreciate your reporting to me monthly on action taken under these authorizations. Copies of such reports should be submitted to the Bureau of the Budget.

The authorizations to the Executive Officer of the Division of Defense Aid Reports contained in my letter of July 26, 1941, and of August 29, 1941, are hereby revoked.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

As Hoover Sees It

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

Mr. MUNDT. Mr. Speaker, ex-President Herbert Hoover is one of a select group of probably not to exceed four or five Americans of whom it can be rightfully said that they are the best informed citizens in our Republic on matters of international affairs and foreign policy. Consequently his observations and counsel on the trying problems of today always warrant the most careful study and consideration.

Even the most vicious and vigorous of Mr. Hoover's critics have never even hinted by innuendo or suggestion that our former President is pro-Nazi or pro-Fascist or pro-Communist. He speaks and writes his convictions with the sole desire to serve the country which he loves so well and which has honored him so highly. His present opposition to the involvement of this country in an outright shooting war is all the more impressive by virtue of the fact that when he ran for his second term the smear artists of the New Deal who were at that time just beginning to learn the art of character assassination, which they have since developed to the *n*th degree, called for President Hoover's defeat because they called him "pro-British" and "too international-minded." These disciples of the Charley Michelson line of poison politics harangued America with speeches and articles recounting President Hoover's long residence in England, in China, and in Europe. They accused the then President Hoover of being more interested in England and in China than in America, and urged his defeat in the interests of "America first." The Democratic campaign speakers even accused Mr. Hoover of having at one time been a British subject.

Mr. Speaker, how rapidly our modern medicine men can change their minds!

One of the outstanding editorial writers of the entire Middle West is Fred C. Christopherson, of the Sioux Falls (S. Dak.) Daily Argus Leader, the leading and the largest newspaper of the two Dakotas. I think the Congress and the country will be interested in reading the following analysis of Herbert Hoover's last radio address to America, and I call attention to the following editorial in pursuance with permission granted to me by the House:

[From the Sioux Falls (S. Dak.) Daily Argus Leader]

AS HOOVER SEES IT

Herbert Hoover spoke calmly, thoughtfully, and dispassionately last night. He approached the greatest problem of our times as it should be approached—in a spirit of penetrating realism and solid reason, devoid of name calling and intolerance.

He speaks as an American—and, we might add, as a great American. His public record and his experience, both here and abroad, have expanded his understanding and his wisdom. He views the current crisis from the position of a man who is familiar with the events preceding and following the World War as well as this war.

His speech last night was notable in its detachment from the excitement of the moment. He discussed basic fundamentals, and he studied the entire picture, not only a part of it.

It is natural to contrast Hoover's speech with that of President Roosevelt last week, and to the advantage of the former.

Hoover exploded the mythical argument about freedom of the seas quite effectively by a simple reference.

"Any definition of freedom of the seas in wartime," he said, "is largely academic. Britain could not accept the President's definition and carry on an effective blockade."

This is a statement which no logician can question. The issue of freedom of the seas is a false one now, as it was in 1917. If we are to enter the war, let us do so on a genuine issue, not one which is manufactured.

Hoover also advanced into the foreground a factor that has been overlooked too generally in recent discussions—the situation in Europe that causes wars, including the multiplicity of small nations, traditional hatreds and long-time boundary disputes, the insufficiency of many countries and the differences in habits and tongues.

It may be argued with some validity that we are concerned now with the effect, not the causes. That we must put out the fires of war first and then proceed to correct the causes so that other similar fires may not flare to plague us.

This is true. Yet our current approach to the subject will not be wholly intelligent unless we are constantly aware of the causes.

Hoover fears, with considerable reason, the grave troubles that may afflict us if we become participants in the war. He considers it a threat to the maintenance of our democracy.

Discussing economic freedom, he said last night that: "A large number of the men administering our preparedness program do not believe in this freedom. With a long war—and it will be long if we put our boys into it—then their methods with the inevitable debt, inflation, unemployment, and demoralized agriculture will make us over into state socialism, probably under some other name."

This is not an idle warning. Instead, it is one whose reality is apparent in countless words and deeds.

There are men in Washington, many prominently placed, who have no faith in the capitalistic system. Insidiously as well as directly, they have sought to advance other ideas—a new deal that out-deals even the original New Deal. These are the men who whisper that we need not worry about increasing Federal debt or insolvency—who blandly say in respect to the debt that "we owe it to ourselves." These, too, are the men who believe in advancing the influence of the Government at every opportunity, who array class against class, and who seek to discredit the private operators of business.

We need not fear their activities if we are conscious of their objectives. But today they are using the label of defense to work toward their nondefense objectives.

The general theme of Hoover's address was an emphasis of our ability to defend ourselves against attack from overseas and to retain in operation in our country a workable democracy.

He voices the plain statement, which is not disputed by military authorities, that an invasion of the United States is a virtual impossibility.

This, by the way, is something which President Roosevelt does not say though he should have available to him the opinions of leading American Army and Navy experts.

To adopt the attitude displayed by Hoover last night is not a confession of weakness. He neither fears nor admires Hitler. But he is realistic. He understands the problems involved in direct American participation and he appreciates the devious ways in which we can be maneuvered into a position where our national honor would compel us to go overseas to squelch the German aggressor.

And he sought to point these out to the American people. In so doing, he was supplying a notable service.

To our advantage, we might study and restudy two statements near the close of his address. They follow:

"We can do our greatest service to civilization by strengthening here in the Western Hemisphere free institutions and free men and women. This is not isolation. It is a service to all mankind. * * *

"Let us never forget we came over the ocean to this oasis of liberty. We extended this oasis greatly by mighty streams of freedom. They were dug and builded by the toil of our fathers and defended with their blood. Are we now to march out into the desert of European war and see the wells of freedom dried up behind us?"

Repeal of Neutrality Act and Aid for Russia

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

RESOLUTIONS ADOPTED BY IOWA UNIT OF FIGHT FOR FREEDOM, OCTOBER 7, 1941

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following resolution of the Iowa unit of Fight for Freedom, recommending unqualified repeal of the Neutrality Act and all-out aid to Russia:

Resolved, That the Iowa unit of Fight for Freedom approves and recommends the unqualified repeal of the Neutrality Act.

Resolved, That the Iowa unit of Fight for Freedom approves and recommends all-out aid to Russia.

The National Income and National Debt

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, October 9, 1941

ARTICLE BY VICE PRESIDENT WALLACE

Mr. BILBO. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a recent contribution by the Vice President of the United State, Hon. HENRY A. WALLACE, on The National Income and National Debt.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Land Policy Review for August 1941]

THE NATIONAL INCOME AND NATIONAL DEBT

(By HENRY A. WALLACE)

(The Vice President considers the increasing national debt and contends that "we will have little to fear if we do all in our power to maintain a relatively stable price level and if we don't allow unemployment and curtailed purchasing power to develop.")

When the war comes to an end there inevitably will be certain persons who will think that the Federal Budget ought immediately to be cut in half, or more.

Those persons will have a tremendous influence when this war is over, and their influence will be felt at once with respect to several farm programs.

I know that many farmers have expressed concern over the mounting Federal debt—what it means to farm prices, to land values, national financial stability, the permanence of our land policies.

Let me cite a few facts, not generally available, which I find useful in balancing our viewpoints on the debt burden and our ability to pay for the things the Nation needs for adequate defense and to prevent unemployment afterward.

To many persons it may be surprising that this year, with our national income greater than in 1929, interest charges on total debts in the United States will be only about $6,300,000,000, compared to about $9,500,000,000 in 1929, a reduction of about $3,000,000,000, or one-third.

It is important that we understand why we have been able to carry an increased

Federal debt and still have interest charges on all debts less than in 1929.

Most of the increase in the Federal debt since 1932 has been due to the fact that private capital, in the face of world preparations for war, could not expand sufficiently to restore full employment and purchasing power.

More recently the increase in the Federal debt has been due to the need for building our defenses to prevent being engulfed by aggression.

By the end of 1941 we shall find that private long-term debts will be about $10,000,000,000 less than in 1929, private short-term debts about $13,000,000,000 less, State and local government debts about $3,000,000,000 greater, and the net debt of the Federal Government about $30,000,000,000 greater. Thus the total of these debts, which in 1940 was $5,000,000,000 less than in 1929, will this year be about $10,000,000,000 greater than in 1929; but interest charges, because of lower interest rates, will be fully $3,000,000,000 less than in 1929.

Gross and net public debt

1941 [1]	120,000	43,000	77,000	42,000	6,900	28,100

[1] Estimated.

So far we have fought our way out of the economic depression and have made headway on our defense program without any real burden to the Nation as a whole. This is clear from the fact that this year's interest charges on private long-term and Government debts are only 6 percent of the national income, whereas in 1932 they amounted to more than 15 percent of a national income that had been cut in two, and to 7.5 percent of the national income in 1929.

If we can keep this healthy relation between the Nation's capacity to carry its justifiable debts and the annual interest costs, we have little to worry about.

But we will have a great deal to worry about if, when the defense program is over, the props are knocked from farm purchasing power by the destruction of the Commodity Credit Corporation, the ever-normal granary, the stamp plan, and the surplus removal system, and if we also knock the props from city purchasing power by allowing unemployment to develop.

We must be realistic enough to know that at that point many short-sighted persons with old ideas will urge the destruction of these protective devices that rest on Government credit and Government fiscal policies. Such a destruction would reduce the national income to such a low point that interest charges would represent at least 15 percent and possibly 20 percent of our national income. No country can endure such a situation without upheaval.

We will have little to fear if we do all in our power to maintain a relatively stable price level and if we don't allow unemployment and curtailed purchasing power to develop. These evils we can stave off if, as consumers, we conserve and save our rising purchasing power for the post-defense time, when we shall need it; if, as businessmen, we begin to think up post-defense production programs for peacetime goods; and, if, as Government agents, we plan for public works and other programs in which private and Government capital cooperate to keep our manpower and our physical resources fully employed.

The steps needed to sustain full employment beyond the defense program have not been developed. I hope a rural conservation works program will be included. The National Resources Planning Board has made recommendations to develop resources and stabilize employment, with special reference to land use and public works, and water and energy development policies. There are proposals for a rural housing program and for transcontinental highways. Private industry, too, is thinking of new products and new uses of old products at lower costs as ways of supplying employment when defense orders taper off. Much is expected of the greatly expanded air-transport industry for peacetime commerce.

If we inaugurate these broad programs of conservation and development, major financial requirements will be involved; the Federal Budget, as well as private capital, will need to play a major role.

It is in this connection that our data on the annual cost of carrying an increasing national debt, public and private become pertinent.

Those who have seriously studied the greatly changed economic and financial conditions are no longer as concerned about so-called Government spending as they used to be. Not that we see our way clearly through the new debt structure that has been reared by the circumstances of the depression of the 1930's and the defense program, but we do see more clearly that the huge volume of Federal finances is but a feature of the tremendous world changes of the past few years.

Ten years ago we were frightened by the prospect of a Federal deficit of one or two billion dollars, when we saw a national income of only $40,000,000,000 or $50,000,000,000. Now we are beginning to envision a national income of $100,000,000,000 or more and see more clearly the joint function of Government and private funds in relation to the development of natural and human resources and to the preservation of our way of life.

Muncie, the Typical American City

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

Mr. SPRINGER. Mr. Speaker, the typical American city of Muncie, Ind., which is located in the congressional district I have the high honor to represent, has taken a long step toward community unity. This has been accomplished by

the formation of the Muncie Cooperative Committee, which is composed of the representatives of labor, trade, industry, education, religion, and agriculture. This committee meets regularly, and in the meetings the various problems which confront the people are thoroughly discussed and many of these ponderous and perplexing problems have been solved by this splendid group which represents practically every part and parcel of that fine citizenship. This community forum is an exemplification of democracy working—and when the forum speaks, the people listen. Theirs is a community development, which has become the very soul of action in that fine industrial and agricultural section. In this forum, where labor and industry are seated together at the table, the differences of employees and employers have been settled and strikes have been avoided. All have the same common interest: that their community may develop and the progress of the people may not be retarded. They are working in unison and their goal is a common one.

Mr. Speaker, the people of that typical American city of Muncie, Ind., are to be commended for this splendid achievement in their community. They are building for the future. The people are working in harmony and they are making progress under this outstanding plan of community unity. May I compliment all those who have had a part in this splendid community plan.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD, and to include therein an article appearing in the Christian Science Monitor, of recent date, in which the citizens of Muncie are highly commended for their foresight and community interest, which follows:

THE COUNTRY SPEAKS: MUNCIE—MUNCIE'S UNIQUE FORUMS

(By Ralph W. Cessna)

Twice a month, on Friday nights, a group of a dozen or so men climb a flight of stairs, gather in the big front room at the Muncie Chamber of Commerce, and talk things over. What do they talk about? Everything, from bootlegging to the gasoline shortage. They sit around a long shiny table. Sometimes feet go up on the table. Always there are elbows on the table—and in the summer time they are coatless elbows.

Once in a while a fist comes down with a bang on the mahogany surface. That's just to emphasize a point, though. It's not a sign of a frayed temper. For these folks don't get much excited. They're friends. They have different, even diverging interests, but they know each other, and have respect for each other. They've learned that they can get more done by talking calmly, and letting the facts speak for themselves.

It's the Muncie Co-operative Committee in action. It is composed of representatives from the following organizations: City of Muncie, Delaware County Farm Bureau, Delaware County Industrial Union Council (C. I. O.), Muncie Central Labor Union (A. F. of L.), Muncie Chamber of Commerce, Muncie Merchants Association, Muncie Ministerial Association, Muncie Real Estate Board, Vocational Department of the City Schools, a Township Trustee, the Township Assessor, a member of the County Council, and a member of the County Commission.

That's a long list, but look it over. You have government, labor—in fact, two ordinarily belligerent factions of labor—trade, industry, education, religion, agriculture. That's a pretty good cross-section of people—except for the women folks. In this particular instance—still not forgetting about the women—such a cross section has some added significance for you'll remember that Muncie is "Middletown." It was designated by economists as "the typical American City." Might we not assume that here in this Muncie Co-operative Committee we have a human agency that comes not too far from reflecting American opinion and American ways, and American potentialities?

Anyway this Co-operative Committee has some most interesting meetings. It began in February this year, as a sort of citizens indignation meeting, to see what could be done about getting more defense contracts for Muncie. They did give that subject a good going over and they haven't by any means dropped it. But they found, when they got into their discussions, maybe to the surprise of a lot of them, that they could—these laborers, and these ministers, and merchants, and industrialists, and politicians, and educators—that they could talk together easily; that they had quite a bit in common.

Gradually other matters popped up at the meetings. It grew to the point where it was accepted that anyone could in fact bring up anything he wanted to. And they did. Sometimes they just talked. Sometimes they adopted resolutions and sent them to Washington. More often, though, they just talked.

But out of the talking has come a new understanding among Muncie's people. For one thing there has been established the basis for the amicable setting of labor disputes. In fact, there have been few if any serious labor disputes, because all of the responsible leaders of groups that might be a party to such disputes have been at these meetings, or represented there. Troubles have been settled before they started. C. I. O. leaders called A. F. of L. leaders by their first names—politely.

The committee was instrumental in pushing a clean-up of bootlegging in the county. They looked into the matter of the national debt, and asked Congress to reduce the domestic budget by $2,000,000,000, so there would be plenty for defense. They discussed the gasoline shortage and memorialized Congress to stop selling oil to Japan. They have looked into the local real-estate situation. And right now they're trying to get Washington to declare the county a defense area so that needed housing projects may be established here.

The good that comes from these meetings in the front room of the Muncie Chamber of Commerce isn't measured though in terms of tangible action on specific things. The good lies chiefly in the fact that these good Americans have found a common denominator; each has seen the other's viewpoint.

If you want to see democracy in action, I can't think of a better place than a meeting of the Muncie Cooperative Committee.

There Will Come a Better Day

EXTENSION OF REMARKS

OF

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

STATEMENT BY HON. CORDELL HULL

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement made by our Secretary of State, Hon. Cordell Hull, which appeared in the October 1941 issue of the Free World Magazine:

"THERE WILL COME A BETTER DAY * * *"

We are in the midst of desperately serious days which involve all peoples and all nations. Unfortunately, many people fail to grasp the nature of this world-wide crisis and its meaning to our country.

Too many people assume that the present struggle is merely an ordinary regional war, and that when it comes to an end the side which is victorious will collect indemnities but otherwise leave the defeated nations more or less as they were before the conflict began. This assumption would prove entirely erroneous should the aggressor powers be the winners. As waged by them this is not an ordinary war. It is a war of assault by these would-be conquerors, employing every method of barbarism, upon nations which cling to their right to live in freedom and which are resisting in self-defense.

The would-be conquerors propose to take unto themselves every part of every conquered nation: the territory, the sovereignty, the possessions of every such nation. They propose to make the people of each conquered nation into serfs; to extinguish their liberties, their rights, their law, and their religion. They systematically uproot everything that is high and fine in life.

Although the task is huge, though time is pressing, and though the struggle may continue for a long time, I am confident that at the end there will come a better day. We are at work not only at the task of insuring our own safety but also at the task of creating ultimate conditions of peace with justice. We can help to lay a firm foundation for the independence, the security, and the returning prosperity of the members of the family of nations. I have absolute faith in the ultimate triumph of the principles of humanity, translated into law and order, by which freedom and justice and security will again prevail.

CORDELL HULL.

Who Were the Mourners?

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

Mr. ANDERSON of California. Mr. Speaker, a recent editorial from the Pacific Rural Press, one of the leading farm journals on the Pacific coast, calls attention to the fact that one more left wing publication has given up the ghost. It is extremely gratifying to learn that another misleading slander sheet has passed to its just reward, probably because the necessary funds and sponsorship were withdrawn.

Excerpts from the editorial to which I refer are rather interesting and under leave to extend my remarks they are included as follows:

WHO WERE THE MOURNERS?

The Rural Observer is dead and buried.
With its dying gasp it passed the torch to the communist Peoples World.
All of which has been widely publicized.

But it may be interesting to inquire who, if any, were mourners? Who wept at the wailing wall?

The Simon Lubin Society might well do so. It is the father of the Rural Observer. Its officers and directors, if such there be, might drop tears in the casket. But if they did it must have been an incognito act, because freedom of speech as practiced by the Rural Observer did not extend to featuring in publicity such details as officers, directors, constitution, bylaws, set of noble purposes, etc.

A diligent lawyer, seeking to find who was officially back of the Lubin Society, so he could bring suit for an aggrieved farmer, gave it up as too much puzzle for him.

However, the Lubin Society did announce "sponsors" and an "advisory committee," doing this back in 1938 and 1939 in the peak days of its uproaring. It is proper to inquire if any of these brought flowers and tears.

Culbert L. Olson, often announced as sponsor, was first publicized as sponsor before his election as Governor. Recently he got a divorce, denouncing the society as "red," according to press quotations.

Stewart Meigs, chairman of the State Board of Agriculture, chairman of the State Fair Board, and regent of the University of California, was publicized as a member of the "advisory committee."

Carey McWilliams, famed in uproar, and chief of the State Department of Immigration and Housing, was named as both sponsor and adviser.

There was also a liberal sprinkling of preachers and professors.

In these latter days when the sowing of "red" oats is not so popular, it is proper for citizens to inquire where these folk stand now.

The editorial then published a list of members of the sponsor committee and the advisory committee, which I shall not place in the RECORD, as some of them may have learned the error of their ways and left the Rural Observer before its all too extended career terminated. However, in the stress of social emotion many honest, square-minded citizens are misled and many times give aid and comfort to un-American organizations whose objectives are not for the best interests of good government. To suggest that they should look before leaping is no more than good advice that all of us can profit from.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

Mr. LAMBERTSON. Mr. Speaker, the foreign policy of this column still remains that it is Europe's dog fight.

Why does not the President ask for a declaration of war and have it over with?

There are $90,000,000 in the two lend-lease bills for tobacco for over there.

The soaked-up and flooded Dust Bowl of western Kansas extends its sympathy to the parched eastern coast.

Our country is in a bad way. We are looking to England for our war policy and to Russia for our economics.

The Kansas share of the two lend-lease bills of $13,000,000,000 is $108,000,000. Do you think they would have voted that in a bond election?

A post-war planning commission, like the proposed price-fixing set-up, would require an army of handlers. The war for bureaucracy is ours first.

General Cornwallis at Yorktown turned over 13 colonies to America. Henry Corn-Wallace is ready to guide the Senate in turning over 48 States to Britain.

Do you remember that just following the war in 1920 a sweeping victory was won against the ticket of Cox and Franklin Roosevelt on an America-first campaign?

One of the men stenographers before the committee always keeps five lead pencils sharpened on both ends and ready while he uses the sixth. This is preparedness.

"Is this you, Joe? This is Franklin speaking. How about taking on religion for the duration?" "Sure; sure; Franklin. Send over a Bible with the next lend-lease shipment of bombers."

Some people's conception of patriotism is only to follow the President, even though he is not following the Constitution. Webster said it was one thing to support a temporary President and quite another to support the Government.

The Union now has its victories. Mr. Young, formerly of the Treasury but who now administers the lend-lease, in his formal statement to the committee, like a thoroughbred Englishman, refers to Britain as "His Majesty's Government in the United Kingdom."

Berlin's gag about Harriman's Moscow conference being the last desperate effort of the United States and Soviet Russia to drag Great Britain into the war is as nasty as Willkie's hoarse protests last November that "the President is leading us down the road to war."

Former Canadian Opposition Now Strong Supporters of Seaway

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

CANADIAN NEWS RELEASE

Mr. GEHRMANN. Mr. Speaker, under unanimous consent to extend my remarks I include herein two short Canadian Newspaper releases showing that Senator Paterson of the Dominion Parliament, one of the largest shippers and operators of elevators in Canada, now strongly supports the St. Lawrence Seaway. These newspapers quote Senator Paterson as follows:

[From Shipping Register and North American Ports, July 1941]

NO IDLE SHIPS ON THE GREAT LAKES FOR YEARS TO COME—DEVELOP THE ST. LAWRENCE NOW

"The present is the most favorable time to deepen the St. Lawrence for the future prosperity of Canada, and for the development of the West." (By Senator N. W. Paterson, of the Dominion Parliament, who is said to be one of the largest owners and operators of lake freighters and terminal elevators in Canada.)

Senator Paterson continued:

"In 10 years the shipping business in Canada has altered more than any other industry.

"From a surplus of ships both on the Great Lakes and through the canal we are at present in the position of having a great shortage of tonnage compared with the business to be handled. This has been caused by two things, first, the surplus of canal boats have been fitted out and sent to various places on the ocean, where they found considerable trade, and, second, the immense growth in business, such as coal, pulp, pulpwood, sulfur, sugar, pitch, and many other commodities too numerous to mention. The grain business has altered to the extent that the railroads are now handling 75 percent of the receipts in Montreal from Georgian Bay ports. The canal ships are not handling grain because of delays in being unloaded through congestion at eastern elevators. The larger steamers on the upper lakes have found business in pulpwood, coal, iron ore, and grain more than sufficient to keep them going 100 percent, and now that the American Government have opened their business to Canadian ships there is not likely to be idle ships during 1941, and it will be a good many years after this war is over before Canadian inland-water ships will find any difficulty in getting cargoes.

"ST. LAWRENCE SHOULD BE DEVELOPED

"From being an active opponent of the deepening of the St. Lawrence Canal, I have been converted to the idea that shipping in Canada has nothing to fear from this construction. If the canals are lengthened we can picture our upper lake ships coming to Montreal with cargoes of grain, in this way making up some of the shortage of canal ships, and I cannot see where ocean ships can become plentiful enough in a number of years to take the time to travel on our inland waters. * * * In looking at the map one feels that this great waterway should be utilized to its utmost, and the tremendous growth of western Canada, after hostilities have ended, will require every means of transportation available. This whole development must be looked at in a broad light with the great future of this country always in mind."

[From the Fort William Times-Journal (Liberal) (Dominion of Canada) of August 21, 1941, forwarded to the American Legation at Ottawa on August 22, 1941, by the American consul at Fort William, Ontario, Canada]

SENATOR PATERSON BACKS WATERWAY

In an article contributed to the twenty-third annual harbors and waterways edition of Shipping Register and North American Ports, Senator Norman M. Paterson, of Fort William, announces his conversion from opposition to the deepening of the St. Lawrence Canal to the idea that shipping in Canada has nothing to fear from this construction. He goes on to say that if the canals are lengthened we can picture our upper lake ships coming to Montreal with cargoes of grain and taking back cargoes of coal from Montreal, in this way making up some of the shortage of canal ships. The senator goes on to say that he cannot see where ocean ships can become plentiful

enough in a number of years to take the time to travel on inland waters. * * * The senator concludes by saying: "In looking at the map one feels that this great waterway should be utilized to its utmost and the tremendous growth of western Canada after hostilities have ended will require every means of transportation available. This whole development must be looked at in a broad light with the great future of the country always in mind."

In his article Senator Paterson notes radical changes that have come about in the shipping business of Canada in the last decade and sums up this development by saying: "There is not likely to be an idle ship during 1941, and it will be a good many years after the war is over before Canadian inland water ships will find any difficulty in selling cargoes."

In announcing his conversion on the matter of deepening the St. Lawrence canals, Senator Paterson automatically has reduced to a large extent opposition to the project. His practical knowledge of navigation matters appertaining to the Great Lakes route makes his change of opinions most significant and augurs ultimate sanction of the enterprise when it reaches the Canadian Parliament.

The Loyal Opposition—In re Senator Austin

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 9, 1941

ARTICLE BY WALTER LIPPMANN

Mr. PLUMLEY. Mr. Speaker, under permission to extend my remarks I am including an article by Walter Lippmann in the New York Herald Tribune of Tuesday, October 7, entitled "The Loyal Opposition."

I desire particularly to call attention to what Lippmann has to say about the position of the Republican Party if it rejects the leadership of Willkie, Stimson, Knox, Austin, Wadsworth, and the advice of men like Capper and Dirksen.

Up in Vermont we do not minimize the importance of the positions which the senior Senator has taken outspokenly. The Brattleboro Reformer well says:

It might be said of Senator AUSTIN that he has been out in front of the pack, and has been leading the administration, rather than merely falling in line with it.

[From the New York Herald Tribune of October 7, 1941]

THE LOYAL OPPOSITION

(By Walter Lippman)

It is said that the opposition in Congress intend to treat the new lend-lease appropriations and the modification of the Neutrality Act as the equivalent of a declaration of war. They will do a grave disservice to the Nation, and also to themselves, if they take this line. For they will be trying to place the country in a dangerous dilemma; they will be forcing the country to choose between the paralysis and collapse of its foreign policy on the one hand and, on the other, what might easily be tremendous new entanglements in a vastly expanded war.

The policy of the United States is to keep the Axis locked up in Europe and to keep Japan locked up in Asia in order to prevent the country from becoming engaged in a great two-ocean interhemispheric struggle that might go on for a generation. This policy, which has now been in effect for about a year, has been extraordinarily successful. It has helped to avert the catastrophe of an Axis victory. It has made possible the development of the armed forces of the United States. It has, as compared with the situation a year ago, greatly improved the security of the Americas.

The American policy is carried out by a mixture of diplomacy, economic action, and naval power, and it would be in the highest degree reckless for the congressional opposition to say that this policy must now be scrapped, and the country must now either do nothing or it must commit itself to a universal war. In this complicated and dangerous world why on earth should we compel ourselves to choose between nothing and everything?

The opposition, and particularly the Republican opposition in Congress, have gone as far as they can afford to go in obstructing American foreign policy, and in the showdown which is now at hand they will face a very serious test. By the action of the President and the Congress this country has been thoroughly committed to a stupendous program of defense against the aggressor nations. The country is committed already to an expenditure of sixty billions which has already begun to grip the whole economic life of the Nation. The country is committed to the support of Britain and of other countries, Congress having voted that their defense was vital to the defense of America. The country is committed by the President to the control of the seas against the aggressor states, and this commitment, though it has not had the formal approval of Congress, was well advertised in advance by authorized official speeches and it was made in the open while Congress was in session and free to express its disapproval.

The Nation's policy has, therefore, been fixed, and the questions now before Congress arise out of measures to make the policy effective. The test which the opposition now face is whether they will refuse to support a policy which has already been adopted. They cannot evade this test by a propagandist maneuver which would make it appear that what is at stake is not the existing policy of limited intervention but the very different question of whether to declare an all-out war which might mean universal war in both oceans. If on the pretext that they are trying to avert this universal war they obstruct the national policy which is, in fact, designed to avert universal war, the maneuver will be quite obvious and will easily be exposed.

The Republican Party in Congress would then find itself in a position where, being irreconcilably opposed to the Nation's policy, the future of the party would become identified with the defeat of the Nation. The Republicans would be making a record in Congress on which they could reap a political profit only if America were defeated and humiliated. There are politicians in Congress who imagine themselves rising to power upon a wave of popular revulsion similar to that which brought Warren Harding to the White House in 1920. But can the Republican Party—its responsible leaders and managers—afford to play a game of that sort?

They cannot afford to do it. If the United States is defeated, if the revolutionary conquerors become masters of the world, does anyone in his senses imagine that in the ensuing disaster, men like Hoover, Landon, Taft, Vandenberg, Martin, will be returned to power? Or that in the chaos and confusion of such a world-wide catastrophe, all that will happen is that the country will shed the New Dealers and then lapse into another Coolidge era? Surely it must be possible for the loyal opposition to realize that they cannot profit by an American defeat. Surely they must be able to grasp the fact that even the political strategy of 1920 was possible only because America had won the war, and that in a defeated country power goes not to the conservatives but to revolutionaries.

There are the profoundest reasons, therefore, both of public duty and of partisan advantage, why the Republican Party cannot afford to be placed in the position where it is gambling on a disaster to the United States. Yet that is the position the Republican Party will be in if it rejects the leadership of Willkie, Stimson, KNOX, AUSTIN, WADSWORTH, and the advice of men like CAPPER and DIRKSEN. It will become known as the party which hopes to win the next election because America has failed and has been defeated in the greatest crisis of modern history. The Republican Party will have invested its political capital in an American defeat and it will have acquired a vested interest in an American disaster. That would be a sorry end, indeed, to the party of Washington and Hamilton, of Lincoln and Theodore Roosevelt.

Moreover, once a party, however sincerely, takes a position which can be profitable only if the country is defeated, it will attract to itself those who not merely prophesy defeat, but also the lunatic fringe who are actively engaged in trying to produce defeat. Once men commit themselves irrevocably to the view that their country is wrong and is headed for disaster, refusing to support the decisions of the majority, they are bound, sooner or later, to become entangled with, to become compromised and contaminated by adventurers and malcontents, by revolutionists and foreign agents, who are working to produce disaster.

And so, the great mass of solid reputable citizens who are the rank and file of the Republican Party are going to feel themselves badly misled if the Republican politicians do not stop walking in their sleep.

Southern Agricultural Problems

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 10, 1941

ADDRESS OF I. W. DUGGAN, DIRECTOR, SOUTHERN DIVISION, AGRICULTURAL ADJUSTMENT ADMINISTRATION

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable I. W. Duggan, director, southern division, Agricultural Adjustment Administration, before a meeting of the Louisiana State Farm Bureau Federation, at Natchitoches, La., on September 4, 1941:

It is always a pleasure for me to visit Louisiana and come in close personal contact with the farmers of this State. It is especially gratifying to appear before a Farm Bureau Federation meeting.

Your organization today can look back on many definite achievements in the interest of the American farmers. No small part of the credit is yours that farmers in general are better off at the present moment than at any time since 1929.

There is a strong temptation for us to pat ourselves on the back, point with pride to our accomplishments, and to trust to luck for the future.

You know perfectly well that trusting to luck has never brought anything but trouble to the farmers of this country, particularly here in the South. Whatever improvements have come to their lot have come the hard way—the way of careful planning, the way of wholehearted cooperation, and the way of determined action.

I mention action because it is the watchword of your organization. Action, intelligent, effective action, is just what the national farm program seeks to provide. I think we are all agreed that the old days of wishful thinking and endless talking about the farmer's ills are gone forever. Since the inauguration of the A. A. A. in 1933, we have been substituting action for words. We undoubtedly have made some mistakes. But never the mistake of standing idly on the side lines, never the mistake of refusing to come to grips with reality.

Louisiana farmers, more than 100,000 strong, have turned to the program as a realistic approach to their problems. Cotton acreage in your State has been cut about half a million acres since 1932. It was, roughly, about 1,700,000 acres in 1932 and about 1,100,000 acres this year.

Much of this land, taken out of cotton, has been planted to crops that build up the soil and check erosion. Some has been devoted to establishing pastures, some to seeding legumes and grasses, and much of the land has been terraced. More soybeans, more velvet beans, more Austrian winter peas—such is the goal of Louisiana farmers.

In looking over their soil-conservation record for last year, I was particularly pleased to note that nearly 120,000 pounds of artificial reseeding went for pasture improvement. I also note that the home-garden provision of the program was utilized by nearly 19,000 farm families in your State last year.

These pasture and garden features are all to the good, now that farmers, factory workers, and businessmen are giving so much thought and effort to our program of all-out defense of the Nation. The defense effort does not in any way overshadow the farm problem. In fact, the pressure of defense needs has brought home to millions of city people the plight of the farming population.

It is recognized now on all sides that food will win this war, just as food in the last analysis has won many other wars. On the farmer lies the burden of supplying food and fiber necessary for the final winning punch in this great military struggle.

The farmer's interest, therefore, becomes one with the national interest. Agriculture must march abreast with industry and labor if our defense effort is to bear full fruit.

In spite of certain adverse effects of the present World War upon their foreign markets, American cotton farmers have much to be thankful for today. Not only cotton farmers but tobacco farmers also, peanut farmers, hog farmers, dairymen, and all other farmers have much to be thankful for. They should be thankful for the farm programs which bring them nearer to equality of opportunity with other economic groups—an equality of opportunity which was denied farmers for so long a time.

They have even more than this to be thankful for today because they can, with genuine joy, be thankful that they are Americans. With the privilege of being Americans also go responsibilities for protecting and maintaining the American way of life. Farmers have as much responsibility as do other groups in America for protecting and supporting the ideals for which we stand. I am sure that they will do as much as any other group to see that democracy continues to exist in the world.

I know that farmers are not only sending their sons to the Army and helping swell the ranks of labor in defense industries but that they are also making their full contribution to national defense in the production of raw agricultural commodities. I am also sure that southern farmers, and farmers in the entire United States, are thankful for this opportunity to serve their Nation and help other countries that are now resisting aggression.

Farmers have an important role to play in national defense. They must do their part to keep us a united people. They must help to make it certain that we not only have abundant supplies of airplanes, of tanks, of guns, and of other materials of war, but also abundant supplies and reserves of raw materials, of food, and of fiber products—for we must have vigorous and healthy men and women, well fed, well housed, and well clothed, to defend the country.

Every farmer, as well as every other individual in this country, must appreciate strongly the fact that he has things worth defending; that he is assured of an opportunity to earn an abundance of nourishing food, of clothing, and of housing facilities.

It is important not only that we have sufficient quantities of healthful food for this country, but that we have for Great Britain and her allies adequate reserves of milk, of poultry products, of canned tomatoes, of pork and pork products, and of beef and beef products. It is likewise essential that we keep our ever-normal granary well stocked for any emergencies that may arise. In this way, when the war is over, we may be in a position to assist in the rehabilitation of the oppressed countries.

Yet we must not make the same mistakes we made in the World War, when we expanded our agricultural plant with no thought of the future, but with the single idea of producing enough food to win the war. You are familiar with the waste of our land and of our soil resources that came about as a result of the World War expansion of the acreage devoted to soil-depleting crops. With our present farm programs, this can be avoided. We must not lose sight of the necessity for conserving and increasing the fertility of the soil. This can be done while we are expanding production of the agricultural products we need.

Although the increase in farm prices and the balancing of supplies with demand has been of immeasurable benefit to farmers, comparable benefits will result from the soil-building and soil-conserving features of the program. We should, therefore, be thankful that we have a farm program that can serve this country in time of war as well as in time of peace, and, we also hope, in the time of rebuilding this war-shattered world. We should also be glad that this program will enable us to expand production of needed farm commodities and to accumulate reserves without either causing producers to receive disastrously low prices or exhausting our valuable soil resources.

I therefore am proud of the record we have made in conserving and building up our soil. We must continue to place added emphasis on this phase of the A. A. A. program, especially here in the South.

Of course, the center of the stage in the South is still occupied by cotton. This great staple is too deeply embedded in our social and economic life to be assigned any secondary role. Today cotton farmers have much to be thankful for. They know before the first boll of cotton is picked what the minimum price will be for this year's crop. This price will be the best received since 1929.

How often in the past have farmers known, before they took a bale of cotton to market, even approximately, what that bale would be worth and that its price would be a fair one?

I am sure you all know full well that the loan at 85 percent of parity is responsible for the present cotton price level. I know also you realize that because of the large carryover of American cotton in this country at the present time and the large stocks of cotton in the outside world, the price of American cotton would be exceedingly low in the absence of the A. A. A. program—if there were any market at all.

While we may all rejoice over the present price of cotton and the assurance of conservation and parity payments, there are some dark spots in the cotton picture, and we must give consideration to these.

Domestic consumption of American cotton is, of course, running at record levels. We consumed about 9,718,000 bales in this country for the season just ended. This is the largest domestic consumption of cotton on record. World consumption of American cotton amounted to approximately 12.4 million bales, or roughly the equivalent of last year's crop.

However, because of the war exports for the crop year just ended amounted to only 1,083,000 bales. The export prospects for this year and for the duration of the war are not at all encouraging.

Although the passage of the bill providing for loans at 85 percent of parity on cotton and other agricultural products has given much needed immediate relief, it has not of itself permanently assured cotton farmers of prosperity. The income from cotton is not determined by the price of cotton alone. This income is determined by multiplying the price by the volume of production—a fact which producers must never lose sight of. This fact is being brought home forcefully just now to cotton farmers in Georgia, South Carolina, Alabama, parts of Louisiana, and other States where the boll weevil and other factors have seriously cut the crop.

As long as we are embarked on an all-out defense program we may be reasonably sure that domestic consumption of cotton will remain at a high level. But it is also probable that production of rayon and other synthetic fibers and competing products will expand to a high degree; and, while we have not been aware of the competition from rayon and other substitutes for cotton this year because of the strong demand for cotton products, the competition nevertheless exists.

Increasing the price of cotton to a fair level may further encourage competition from substitutes unless some action is taken to offset this increase in the price of cotton. Cotton farmers should think about this. In general, they realize that the cost of raw cotton is a very small percentage of the cost of the finished product. Many are aware, in fact, that there is an average of only about 12 cents worth of raw cotton in the cotton articles costing a dollar which consumers purchase. For that matter, a laundryman who launders the shirt you wear receives twice as much each time he launders that shirt as the farmer received for the cotton in the shirt.

Yet we must not forget that the cost of the raw material in many articles is still an important item in the cost of the finished product and may encourage competition from commodities whose prices have not advanced as much as the price of cotton. Once the war is over and we reach normal times, we may expect increased competition from factories currently being expanded for the production of rayon and other synthetic products which may be substituted for cotton. At present, cotton farmers are enjoying relatively favorable prices, prices which are not out of line

with other commodity prices, since the parity principle is aimed at fairness for all. But they should not be lulled into a false sense of security or assume that the cotton problem has been solved.

The loss of exports for the duration of the war would have been disastrous for the one-third of the farm population which lives on cotton farms had it not been for the increase in domestic consumption, the cotton loan program, and the assurance of soil-building and parity payments. In normal times we exported about one-half of the annual cotton crop. In fact over a 10-year period we exported more than 6,000,000 bales annually, and in 1 year, 1926, we exported almost 11,000,000 bales. Therefore, cotton farmers must cooperate in making sure that they have the type of program which will enable them to compete successfully in world cotton markets when the war is over. During the war they should sell every bale they can in those foreign markets still available to them. They should discuss in groups such as yours the problem of competition from synthetic and other competing fibers, as well as the problem of our loss of foreign markets. It is in discussions such as these that programs are developed. Programs are neither developed nor executed in Washington. We in Washington merely represent and express the combined thoughts and desires of the people at home.

No one can say with any degree of certainty just what we must do to maintain our position in world markets after the war, because we don't know in just what condition our former customers will be. It may be that we will have an international agreement between the cotton-producing countries of the world. I think this would be very desirable.

It is almost certain that we will have to accept goods in exchange for our cotton to a greater degree than in the past. If so, it may even be necessary for Government to take a far larger part in the actual bartering and handling of our export trade in order to increase the bargaining power of the American farmer. Our Government might also find it expedient to renew export subsidies on raw cotton and to take additional steps to increase the relative quality and appearance of American cotton intended for export. And, of course, we must continue and even increase our present efforts to stimulate the domestic consumption of American cotton.

We should be thinking about these things and charting the course we expect to follow. It is only through the concerted action of a well-informed people that we can develop a sound and workable program. Our farm programs are standing up admirably under the stress of the defense emergency. I know the collective intelligence of the farmers will stand up as well. We must be alert to avoid the pitfalls that followed the first World War. We must do all in our power to head off inflation and its attendant disasters. I doubt very much that our democratic form of government can survive another crack-up such as the one we suffered in the 1920's when inflation swept us to the brink of ruin.

Farmers are just as interested as any other group in keeping our price system on an even keel. Farmers have just as big a stake in the national economy as any other workman or businessman. Agriculture is set against runaway prices.

In the effort to avoid inflation, however, the farmer feels that his sacrifices should be no greater than those of other groups. Just now he is being represented in some quarters as grabbing for all he can get at a time of national crisis. The farmers are familiar with this type of criticism. They are not disposed to answer their critics in kind. I can see no peril of inflation arising from the meager income of the cotton farmers.

Before the present emergency all that agriculture sought was equality with labor and industry. This equality continues to be the goal of American farmers. More than equality farmers have never asked. Less than equality no genuine democracy can withhold.

Farmers remember that organized industry for years enjoyed immense advantages showered by local, State, and Federal Governments. They remember the billions of dollars they have paid into the protective-tariff coffers of domestic manufacturers. The burdens of this system alone outweigh all the benefits put together which government has extended to agriculture from the beginning of our national life down to the present day.

Farmers remember the process, stage after stage, by which monopoly gained control of many important sectors of American business. As recently as 1935, according to internal-revenue reports cited by President Roosevelt, less than 5 percent of our corporations owned 87 percent of the total corporate assets of the Nation, insofar as these assets were reported to the Government.

This single fact throws a flood of light on the picture of monopoly control and concentration of economic power under which industrial production is limited and prices fixed. More could be added to fill in the outlines—discrimination in freight rates, abuse of the patent laws, and operations of the banking system.

Bear in mind, all these advantages fell to the lot of business because of the active, friendly intervention of the Government, because of man-made laws, and not because of the free play of natural economic laws. Under a monopoly, the law of supply and demand is repealed. From the sound of some of the talk I hear, you would think that farmers were the first and only body of citizens to receive favors from Washington.

Organized labor has far outstripped the farmers in the race for equality with business. Membership in labor unions has trebled since the low point of the depression. Hand in hand with striking gains in employment and income have gone the series of remedial measures dealing with the problems of labor—unemployment compensation, old-age insurance, the Social Security Act, the Wages and Hours Act, placing a floor under wages, a ceiling over hours, and outlawing child labor; the Public Contracts Act; immigration laws; and many other similar measures with which you are familiar.

Farmers are much nearer to their goal of equality with other economic groups than they have been for years. One of the reasons is the growth of farm organizations. Farmers must be well organized, just as other groups in this country are well organized. Farm organizations must grow in numbers, for in numbers there is strength.

Group organizations are natural and healthy products of democracy. It is only when these groups become coercive and selfish that they defeat their purpose.

Too often some of these groups put their own special interests ahead of the general welfare. This is a ruinous policy. In the long run the pressure group will suffer for such actions.

I feel confident that the farmers of this country will not make such a mistake. Yours is a wonderful opportunity for showing what can be done by concerted action directed toward the welfare of all the people.

If you can always stand squarely for the interests of the farmers without forgetting that the consumer, too, has his rights; if you can continue the fight for permanent parity for agriculture and at the same time support the legitimate claims of labor and of industry; if you can hold out for security and a decent American standard of living on every American farm, and at the same time not begrudge the city worker the privilege of seeking such security and such a standard of living—then you will deserve to become, and I believe you will become, a stronger and a greater organization.

The Life of Judge Brandeis

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 6, 1941

Mr. DICKSTEIN. Mr. Speaker, many years ago a book was published entitled "Dissenting Opinions," by Mr. Justice Holmes. In this book there were collated the judicial opinions of Oliver Wendell Holmes, the son of New England, who was a member of our Supreme Court tribunal for so many years, representing the liberal views of that Court on a conservative background.

In 1916 another son of New England joined the Supreme Court. Louis Dembitz Brandeis became a judge and colleague of Justice Holmes, and for many years thereafter decisions of that tribunal used to read, "Mr. Justices Holmes and Brandeis dissent." Thus the two famous dissenters were linked together in our highest Court, and it was they who helped to mold judicial opinions to such an extent that from dissenters they became the leaders of that tribunal.

Justice Brandeis was described by one of his eulogists during the many birthday celebrations which were arranged in his honor as being "by descent a Galician Jew, by birth a Kentuckian, by training a New Englander, and by temperament the judge."

Brandeis was the kind of individual who did not espouse a cause because it was popular, nor did he ever fail to give his aid and assistance to any worthy cause simply because his own interests might have been opposed to it. Brandeis was the attorney for large corporations and stood to gain a great deal by representing their interests. Nevertheless, he became known as the people's attorney, and without compensation and from his own purse defended many causes which his personal self-interest should have urged him to fight against. It was Brandeis' rule, as an attorney for many years, to limit his income from the profession to $15,000 a year. Whenever his earnings exceeded that sum he would not take on any cases that year, and any surplus thus earned would be turned over to the public interests which he represented.

When Brandeis was appointed to the Supreme Court in 1916 there was a storm of opposition raised against his selection, and many a protagonist of vested interests appeared before the committee of the Senate which was considering his nomination to voice his opposition to the appointment of Judge Brandeis because of his activities on behalf of the people.

Nevertheless, Brandeis' nomination was confirmed, and during his many years of service on the Supreme Court Bench he exhibited to a very large degree that wonderful quality of his mind which made him the foremost dissenter, and then the leader of our highest court.

In 1916 Brandeis was looked upon as a wild-eyed Socialist. In 1939, upon his retirement, he was considered one of the most conservative judges. Chief Justice Taft, before he himself ascended the bench of the Supreme Court, had appeared before the Senate committee in 1916 against the nomination of Justice Brandeis. In 1930, however, Justice Taft, then Chief Justice of the United States, publicly stated to Mr. Justice Brandeis that he was not justified in his opposition to him and tendered him the humblest apologies for his action in 1916. Judge Brandeis magnanimously accepted Chief Justice Taft's apologies, and from thence on the two became very close and intimate friends.

When Mr. Justice Brandeis retired from the bench in 1939 there was not a member of that Court, or the attachés of that Court, or an attorney who ever appeared before that Court, who did not feel that in Justice Brandeis' retirement from the bench, one of its most outstanding characters was lost. Not only as a judge, however, but also as the author of many important books on the law, particularly addresses and speeches, will Justice Brandeis be remembered. In his writings he exhibits that wonderful style which furnishes that unique flavor, which will live forever in the annals of our jurisprudence.

Justice Brandeis lived in retirement during the last 1½ years and little was heard from him. He was nursing his frail health, which was never too robust, and whatever influence was shed by his benignant personality was given to private conversations with friends and other well-wishers. While Justice Brandeis' work on the Supreme Court Bench came to an end by his retirement, the rays of his personality reflected in the work of his brethren, and those who sat at his feet while he was expounding the law from that august tribunal which he graced for almost one-quarter of a century.

Dedication of New Home of Lincoln Post, No. 89, American Legion, in Philadelphia, Pa.

EXTENSION OF REMARKS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 10, 1941

ADDRESS OF HON. JAMES P. McGRANERY, OF PENNSYLVANIA

Mr. McGRANERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I delivered before Lincoln Post, No. 89, of the American Legion:

Commander Upshur, Dr. Perkins, Colonel Gilbert, officers of Colonel Gilbert's staff, Gold Star Mothers, comrades of the auxiliary, my comrades, ladies, and gentlemen, I am honored to join you on this great occasion when you are gathered together to dedicate the new home of Lincoln Post No. 89 of the American Legion. This splendid meeting place should fill you with pride today—and I must confess to you that I share your pride in a particular and personal way. For you have built an important civic center just within three blocks of the house where I was born, grew up, and lived my entire life. Lincoln Post will ever be a source of pleasure and inspiration to your comrades and to all Philadelphians. The spacious building here erected will be a lasting tribute to the men whose ability, devotion, and sacrifices made it possible and especially a memorial to your founders, Comrades VanAdams, McEachern, Clyde Allen, George Washington Forster, Maxwell, Dewey Wynn—as well as to those pioneers who carried on after them, Charles Smith, Cottman, and William (Pop) Taylor.

I could go on and cite other names of legionnaires who worked long and unselfishly for this post. But you know those men as well as I. And, as we look about at the officers and members of your post, we can see many of them here to rejoice with us this afternoon.

My congratulations are tendered to all of you here. And at the same time I wish to congratulate Colonel Howard Gilbert, commanding officer of the Three Hundred and Seventy-Second United States Infantry, who is here on the platform with his entire staff and whose regimental band, seated immediately in front of the stand, has stirred us by its music just as the clear and forceful remarks of the distinguished Colonel Gilbert have inspired me.

That all of you are here today is eloquent, silent testimony that you have a great meaning to America, and that America has a great meaning to you.

As Americans, we glance at the world beyond our hemisphere in this troubled time, and we glimpse in every land war and all the doom companions of war—hatred, suffering, famine, pestilence, and every evil hostile to civilization.

We are assembled here in an hour when loyal citizenship, militant patriotism, thoughtful courage, and faith in God must characterize every American. It is a period for reason and serenity joined with the firm purpose to preserve America inviolate, its ideals, its traditions, and its free institutions.

These are the qualities needed in America now more than ever, and these are the qualities exemplified by the members of American Legion Lincoln Post, No. 89. No wonder then that I find it a distinct privilege to greet you and to urge you to continue the patriotic services which you rendered in time of war, during this momentous period of the world's history.

Some who learn of your post may possibly ask: Why a Negro post for any group of war veterans? The establishment and maintenance of Lincoln Post does not mean that you are not satisfied and proud to be comrades and fellow members with those veterans who compose the other posts. It does signify, however, your desire to take justifiable pride in the contribution which your race has made in the military service of the United States to the defense and upbuilding of America.

It also fulfills the splendid purpose of making the general public aware of the willingness of the children of your race to make the supreme sacrifice for the preservation of American institutions. Most important of all, the mere existence of this post should finish forever the prejudicial propaganda of those who would seek to deny to your people the full enjoyment of the civil and religious liberties guaranteed to all citizens under the Constitution

Let us reflect for a moment upon the glorious record of Negro veterans, for it is a record that attests the patriotism, the loyalty, and the considered courage of your ancestors—first in the Revolution of 1776 and thereafter in every war in which the United States has been engaged.

The first blood to wet American soil in the War for Independence was shed from the breast of Crispus Attucks, as that Boston statue to his memory testifies; and during the struggle of the Colonies that followed, more than 3,000 of your people fought for our new country in the same heroic manner. We cannot forget those early heroes—Peter Salem at Bunker Hill, Pompey at Stoney Point, Austin Dabney in Georgia, the 700 Negro soldiers at Monmouth, or the valiant regiment in the Battle of Rhode Island.

It was in the same tradition of valor that Negro soldiers fought in the War of 1812. They battled bravely under Perry on the sea. They came to Andrew Jackson's rescue and saved the day in the Battle of New Orleans in 1815, and by their bravery drew from him highest praise for their defense of this new country.

In the Civil War 178,000 Negro soldiers maintained the honor of the Nation and proved that they could not be surpassed as brave defenders of their country.

The Negro soldiers of the United States fought valiantly at Santiago in the Spanish-American War. The Tenth Cavalry and the Twenty-fourth Infantry distinguished themselves as the heroes of their generation.

In the World War the Negro officers and troops held sectors at St. Mihiel and Verdun with such singular success as to merit the heartfelt praise of the commanding general.

In peace or war, in victory or time of peril, the Negro soldier has exemplified a loyalty and a bravery that rank as the highest expression of patriotism. All true Americans are rightfully proud of these heroes, as they are of the peacetime accomplishments of the Negro people.

For the Negro in his contribution to the development of this Nation has not been limited to the military alone. We cannot forget Frederick Douglass and Sojourner Truth during the period of the reconstruction. Booker T. Washington, like Washington and Lincoln, has been commemorated by a United States postage stamp. Phillis Wheatley, who came to America as a slave, before her death was recognized as foremost among the literary figures of her time. It is not surprising that the most delightful tribute ever tendered to George Washington was the creation of her pen.

We know well—and as Americans we are proud of that distinguished painter whose work was recognized even before the Civil War—Edward M. Bannister; of that sculptor of the same period, Edmonia Lewis; of Henry O. Tanner, who, since their time, has established his right to be honored among the greatest of American painters. Ranking among the most artistic are the productions of Paul Laurence Dunbar and James Weldon Johnson. On the stage rightful recognition has been granted to Paul Robeson, Richard B. Harrison, and Ira Aldridge, among others. First lady in the world of music is Philadelphia's well-loved Marian Anderson, whose glorious, cultivated voice has thrilled the hearts of hundreds of thousands here in the United States and abroad. We cannot forget Benjamin Bannaker, the mathematician and astronomer; or that profound man, George Washington Carver, the agricultural chemist; or Dr. Carter G. Woodson, the eminent scholar and historian; but I could go on and on calling the roll of thousands of contemporary Negroes who have distinguished their people and America by their achievements in art and science, in industry and government.

More eloquent than any words of mine, this Lincoln post is a monument to the pride of patriotism, pride of accomplishment, and progress of the Americans of your race.

And it is significant that the most favorable steps forward in Negro life have been taken under the leadership of liberals. That true liberal, Abraham Lincoln, is properly honored by your post. But after the splendid humanitarian work of Lincoln, little or nothing was done for your people until a new era of liberalism for all Americans came into existence under our great President, Franklin Delano Roosevelt. And the leaders of your race played a tremendous part in this revival of liberalism under Roosevelt. Fittingly—in his administration—for the first time in the history of the United States, a President elevated to the rank of commanding general a Negro; one who in his own right is a great soldier, having the respect and admiration of the high command of our Army; a man who is affectionately known as Gen. Ben Davis.

Liberalism can be maintained only by eternal vigilance, which is the price of true liberty, to borrow a phrase from one of our first American statesmen. That is still true today and should be the watchword for us veterans of the last World War who look out on a war-weary world.

All races, creeds, and colors which go to make up the American family must unite still more closely under the banner of freedom and tolerance, under the flag of courage, loyalty, and patriotism, and thus exemplify the true meaning of the liberal democracy that is the United States of America.

We veterans of the last World War cannot think our battles are over. There is nothing more foreign to the free institutions of America than to question or deny the birthright of every American—no matter what his race, creed, or color—to enjoy the equality of opportunity, the religious liberty, and the social and political justice that are guaranteed to all.

It is not enough to look askance at the vicious intolerance of the totalitarian nations—rather, we must be alert and aggressive to prevent such doctrines from taking root in the free soil of America.

We must be on guard to preserve our priceless heritage from the insidious forces of destruction within our own land—we must defend and make secure the democratic institutions of our own beloved country. We must be vigilant against those who would annihilate the freedom for which our ancestors fought and died. With faith in God and basic devotion to American ideals we can be ever victorious over those who would undermine the liberalism of America.

Guarding the destinies of America against the perils that threaten it from abroad and the sinister enemies that would sabotage it at home is more than ever a cause to which you and I may well dedicate ourselves.

Weeks for War if Necessary To Beat Nazis; Foe of New Deal

EXTENSION OF REMARKS
OF
HON. FOSTER STEARNS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Friday, October 10, 1941

ARTICLE BY W. E. MULLINS

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article by W. E. Mullins:

[From the Boston Sunday Herald of October 5, 1941]

WEEKS FOR WAR IF NECESSARY TO BEAT NAZIS; FOE OF NEW DEAL

(By W. E. Mullins)

Just as hostile now as he ever has been to the domestic doctrines of the Roosevelt administration, Sinclair Weeks, one of the most distinguished Republicans in New England, nevertheless yesterday appealed to his party associates, particularly those in public life, to disregard all political considerations in their approach to the Nation's current foreign policy and to join with the administration in support of it.

Giving public expression to his views for the first time since the 1940 election campaign, this Massachusetts member of the Republican National Committee and executive high in its councils urged Republicans in general to enlist for the duration of the emergency in a commitment to all-out aid to Britain without reservation.

* * * * *

Colonel Weeks spoke as the father of two sons of military age and also as a soldier who saw service in the United States Army in every grade and rank up to lieutenant colonel and as a member of a combat unit in the A. E. F. which saw 9 months' service at the front.

* * * * *

In his interview, Colonel Weeks said:

"I readily concede there are two sides to this issue. I have found Republicans on both sides of it. Nevertheless, I am convinced that I express the point of view of a majority of Republicans throughout the country, and certainly in Massachusetts, when I appeal for support for the administration's foreign policy.

ADJOURNED AT WATER'S EDGE

"I have no quarrel with those who disagree with my point of view. I do insist, however, that when we come to the water's edge, politics must be adjourned. I am not an extremist to the extent that I should insist upon throwing out of office a man who has voted as I should vote on 99 out of 100 issues simply because he disagrees with me on our foreign policy, provided only that his vote be predicated on his sincere and honest convictions as to what he believes to be best for the country.

"I believe that active and complete aid to England is the best policy for our country. I believe I can support the administration in this particular and continue to be hostile to its other doctrines without diluting my Republicanism. One of the tragedies of this situation is the wisdom of the Roosevelt foreign policy in contrast with its socialistic and utterly inefficient approach to the administration of our domestic affairs and the defense program.

"I know that I can be uncompromisingly in support of the one and equally opposed to the other, while continuing to be a loyal American citizen.

BELIEF IN WILLKIE

"I believed in Wendell Willkie when I committed myself to his cause before last year's Republican convention. I believed in him during the campaign. I believe in him today. He speaks for me in his current discussions of foreign policy and in his views on our domestic problems. He has not changed.

"This talk of Willkie selling out to Roosevelt is pure bunk, if I may use the expression. It took courage for him to act as he did act; but he never hesitated. I do not believe he has the slightest degree more confidence in Mr. Roosevelt as an administrator and executive today than he had 1 year ago today.

"Mr. Willkie could not play politics with the country in danger. He has done what he has thought to be in the best interest of this country. He is just as much wrapped up today in his endeavor to preserve the system of private enterprise as he was during the campaign, and so am I. He believes his course is the course to be pursued. He believes a victory for Hitler will menace private enterprise. And so do I.

"Men far more able than I have advanced countless reasons why the totalitarian system must be destroyed. I have long ago concluded that their logic is unanswerable.

WORLD SMALLER TODAY

"The world is smaller today than it was 20 years ago when we came back from France. The development of aviation in that period alone demonstrates this, and at its current rate of advancement in 10 to 20 years more the world will be infinitely smaller. I venture to predict that within 5 years it will be as simple for us to go to India as it now is to go to Chicago. Who can deny this?

"If we agree that the world is getting smaller, it is from our own selfish viewpoint, even if for no other reason, vital that we be interested in what goes on in Europe and elsewhere in the world.

"Is it in dispute that within a period of 3 years Hitler has caused more misery and human suffering and privation than any man in history? Generations to come will say of him, as has been said of his infamous ancestor, that where he stepped, there the grass never grew again.

"Is it in dispute that all genuine Americans are opposed to every bit of Nazi ideology which does violence to our conceptions of freedom of speech, freedom of religion, and freedom of the press for all?

VERY EXISTENCE AT STAKE

"Our conception of these freedoms and their very existence is at stake, and it is ridiculous beyond measure for us to say that we are not interested in their preservation. This is what the British Empire now is engaged in, and for us to stand idly by is to completely ignore the realities of the situation.

"If it is true that we are interested, we have to do something about it, and it is my belief that we should do whatever is necessary to aid the British Empire. We should aid it in supplying matériel. We should aid it by convoying their matériel. We should even be prepared to fight beside England if active participation in the war becomes necessary to accomplish the destruction of the Axis Powers.

"If Hitler prevails, we in North America will be as on an island in the midst of a hostile world, under the perpetual necessity of maintaining a huge defense program the cost of which will bear down upon us to a vastly greater degree than the cost of getting in and doing the job now. It is inconceivable to me that sane Americans are ready to stand aside and see this come about.

REPUBLICAN'S ATTITUDE

"That is the picture I hope Republicans in public life will see. I do not anticipate that all of them will agree with me, and I don't propose to quarrel with those who do not see it as I do, but I believe that the Republicans of the Nation are just as much opposed to the things that the Nazi stands for as Democrats are.

"When you consider the prospects of making political capital out of opposition to our foreign policy, it is barely conceivable that success might stem from it; but, personally, I do not care to see political capital made out of such a world situation as we witness today. The various tests of public opinion will, I believe, indicate that I reflect the opinion of my fellow citizens wherever they live.

TWO-PARTY SYSTEM

"It is imperative that we maintain our two-party system of government. In view of the Nation's financial plight it is even more

essential now because of the conditions that will confront us when the war ends, as it inevitably must some day.

"Remove this administration from the field of foreign affairs and I don't think there are words of condemnation sufficiently severe to denounce its activities and its encouragement of socialistic and communistic doctrines.

"Employment today is 20 percent up over 1929 and what do we see? We see for example an administration continuing to encourage enrollment in the C. C. C. and the N. Y. A.—organizations which were designed solely to take our idle youth off the streets and to furnish employment of various descriptions for them in the depression period.

"The President's stubborn refusal to delegate authority in the direction of defense production is reprehensible beyond degree and is the final index of his own limitations as an administrator in contrast to the superb qualifications of patriots who would be delighted to aid. By far the greatest bottleneck of our production is right in the White House.

POLITICAL INSTRUMENT

"The defense production program has been used shamelessly as a political instrumment to implement the New Deal. High-salaried jobs have been portioned out to politicians just as they were in the days when the New Deal was up to its elbows wallowing in political patronage. I make no defense of this phase of the administration.

"Even more subject to criticism, I believe, is the utter disregard of the morale of the soldiers in the camps, serving for $21 a month while their Commander in Chief lifts not a finger to eliminate strikes in defense industries—promoted on a wildcat basis, in some instances, by racketeers whose loyalty to the country may well be questioned.

"It is essential that we keep an opposition party intact as a vigorous and militant institution to combat the moves of the New Deal administration, which, under the guise of defense, gives broad authority to planners who would substitute national socialism for the private-enterprise system which, over a period of 150 years, gave this Nation the highest standard of living the world has known.

FELLOW TRAVELERS

"These planning groups, composed to a large extent of fellow travelers, are high in the Government, and their recorded views disclose that they are concerned not in the slightest with the national debt or any other phase of the Government's financial picture.

"After the war there will be need for a Republican administration to restore the ancient standards we revere. The New Deal has disclosed no capacity to produce sound government, and unless we change our course and substitute good management we are inevitably headed for the bankruptcy that became our goal the day Mr. Roosevelt took over the Government.

"All these considerations will amount in importance with the end of the war, but meanwhile we have this other problem of destroying Hitlerism to solve. In many ways the President has made it even more difficult than it ordinarily would be to solve, and he also has made it difficult for many Republicans to go along with him.

ANYTHING BUT FRANK

"For instance, consider the methods he has employed. He has been anything but frank with the Congress. Repeatedly he withholds information to which the Members are clearly entitled. He has played politics with the defense, and he has steadfastly refused to give vital and adequate information to those who should be taken into his confidence.

"Accordingly, holding these views, it has not been easy for me to maintain my steadfast attitude in support of the Roosevelt foreign policy. It is not easy for me to talk of the prospect of plunging the Nation into war. I have two sons of military age, so I am not without a personal interest in such a decision."

* * * * *

Gen. Casimir Pulaski

EXTENSION OF REMARKS
OF
HON. LUCIEN J. MACIORA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Friday, October 10, 1941

Mr. MACIORA. Mr. Speaker, we who live in a land blessed by peace cannot fully appreciate how great is this privilege unless we stop and think—stop and think of events which are going on abroad. United here today are men and women of every race and creed. Here we have no classes; no geographical lines separate the so-called superior races from the so-called inferior races. Nowhere else in the world today could there be such an intermingling of persons, gathered to pay homage to an individual who personifies an ideal. Elsewhere in the world ideals have been shattered. There is no time for sentiment—no time for respect for the persons and the things which have accounted for the progress the world has made.

The history of General Pulaski is too well known to all lovers of American tradition to require detailed repetition by me. With George Washington and his aides General Pulaski fought, died, to make this the land of the free. Today it is our privilege and our responsibility to keep it the land of the brave. If General Pulaski were alive today and in his native Poland he would be in the thick of the fight against oppression and persecution.

If he were alive today and the United States once more were on the march to freedom, he would be at our shores volunteering, again, to do his part to enshrine the sacred principles of a free people, self-governed.

Since the dawn of time humanity has struggled against oppression, and in each of those struggles strong, brave men have risen to the top. The times have always produced leadership when leadership was the crying need of the day. To Pulaski waging the fight for freedom was an honor and a privilege.

Before the Revolutionary War he was at his father's side in the defense of his country's borders. He had been described by Benjamin Franklin as "an officer famous throughout Europe for his bravery and conduct in defense of liberty."

From volunteer status he rose to the rank of brigadier general in the forces of George Washington. He was the father of cavalry in the United States Army, originally known as Pulaski's Legion.

There was something appealing, something which touched the romantic spirit of our people in the dashing character of this young liberty-loving soldier from another land. The boldness of heroes always moves men and women, and Pulaski's boldness as he led his little picked band in daring attacks was astounding.

This country will always revere the name of General Pulaski because he loved liberty and justice beyond the bounds of race or country, and sacrificed his young life on the altar of American freedom. He died when he was but 31—that we might live.

But Pulaski lived on in the hearts and minds of the legions which went to the battlefields midway through the nineteenth century to preserve the Union and to make imperishable the principle that all men are born free and equal.

Pulaski lived on in the legions which went abroad in 1917—many of the legionnaires, men from our own city. He lives on today in the minds of the young men who have been called to serve in a peacetime protective army, whose sleeves are rolled up, ready if necessary for a defense which we pray they may never have to wage.

We should always carry with us the memory of his noble life and heroic deeds, because he taught us to remember that our liberty is the greatest asset we have. We should guard it zealously. A united nation—we will guard it.

Investigation of the Detroit Office of the Federal Housing Administration

EXTENSION OF REMARKS
OF
HON. RUDOLPH G. TENEROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, October 10, 1941

Mr. TENEROWICZ. Mr. Speaker, based on a long and thorough study of facts presented to me regarding the Detroit office of the Federal Housing Administration, I have today introduced a resolution providing for a congressional investigation of that office.

I have interviewed a number of people in this connection and have made a personal investigation of some of the facts presented to me and an unbiased and careful study of the situation indicates that irregularities exist in the administration of the office not only in my district but in the whole of Wayne County, Mich.

Appraisals and commitments as made by the local Federal Housing Administration office show a crying need for an investigation as well as a thorough reorganization of the local set-up from top to bottom. Some of the facts regarding the relation between the Detroit F. H. A. and certain mortgage companies, builders,

and a few lumber concerns strongly indicate collusion between the F. H. A. and these companies. I have interviewed real estate men, builders, and new-home buyers. I have even been in some of these new homes.

I find that the bulk of the business has gone to a restricted number of people. Former members of the Detroit F. H. A. seem to belong to this select few and are doing a most lucrative business in connection with mortgages. Mortgage summaries for the past 3 years show this. These gentlemen always have an entre, while, strange as it may seem, reputable businessmen, contractors, builders, and so forth, find themselves compelled to waste time in anterooms until someone deigns to attend to their matters.

We still find some nonlicensed appraisers working in the F. H. A. office. Appraisal and commitments are not equitable. Appraisals run high on favored subdivisions, and inversely are too low on others which, in most cases, are rejected for reasons that defy reason. You will find the F. H. A. blessing bestowed on property identical to adjoining property having the same improvements which is disapproved. Reputable realestate concerns have had so much difficulty with the Detroit F. H. A. that many have ceased trying to obtain F. H. A. approvals on properties.

Reports show that the Government is losing money on homes built with F. H. A. approval. In one of the letters received from a reputable citizen I find the following:

If anyone has occasion to examine the realty records in Wayne County, he cannot help but note the large number of properties under foreclosure that are covered by F. H. A. insured mortgages. I am informed that a larger number of properties covered by F. H. A. insured mortgages are being foreclosed each week, and that the Government is taking a severe loss in most cases.

F. H. A. inspectors have permitted shoddy and careless construction in numerous cases. Final inspections are made on new buildings not completed, and local building codes are ignored. Building specifications mean nothing. A certain few builders have been allowed to interpret codes and laws pertaining to building construction to their own advantage. I have a letter written by one of these builders to a new home buyer, and I quote therefrom:

The house has been completed for some time and our records reveal that a certificate of approved final compliance inspection report was issued by the F. H. A. on (date).

And again in the same letter:

We shall have no alternative but to enter the house for sale to others, and charge you with any loss we may sustain by your refusal to perform your contract.

This home buyer was given a week in which to comply and he moved into this new home notwithstanding the fact that the paint job was incomplete, a cracked front door was not repaired or replaced, and the roof leaked. He was afraid he would lose his down payment and probably incur other expenses through litigation. And this was a case taken up with both the F. H. A. and the builder to no avail.

Faulty construction has been found in hundreds of homes and complaints were made to Mr. Foley personally and to members of his staff, but these people who have put their savings into homes have received no consideration from the F. H. A. office. The following wires were sent to me from home buyers:

About time something was done about F. H. A. inspections. Neighbors all around me complaining homes not built to specifications. Why?

Have to hang lemon on my home in order to get my home built to specifications. What is wrong with the F. H. A.?

Cannot understand why my home is not brought up to specifications. No cooperation from builder or the F. H. A.

Having some difficulty trying to have my home built to specifications. Would like to get some action from F. H. A., but can't get any.

F. H. A. will not request builder to bring my home up to specifications, and it is in very bad condition.

Would like home completed; no cooperation from builder or F. H. A.

Home office of F. H. A. in Detroit here not cooperative with home owner. My home not complete.

F. H. A. here does not request builder to do what is written in black and white in book of specifications. Something wrong somewhere.

My home not complete. Builder threatened to sell if I didn't move in. F. H. A. not cooperative here.

Paid hard-earned money on my home, which is not complete. No results from builder or F. H. A.

F. H. A. not request builder put slaters felt on roof. Very important. Book of specifications calls for it.

What's wrong with the F. H. A. here? Home not up to specifications.

Why is slaters felt put on some roofs and not on others by the same builder?

Home not complete. Had several F. H. A. inspectors, still no results.

Why can't I get some action on my home? Roof leaks. May need new ceilings; contacted builder, no results.

These are but a few of the many specific cases which have been brought to my attention. This only scratches the surface, and it is my opinion that the situation justifies an immediate and thorough investigation.

Joe Martin—The Measure of an American

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, October 10, 1941

EDITORIAL FROM THE LOS ANGELES TIMES

Mr. PLUMLEY. Mr. Speaker, a friend of mine in California encloses in his letter a clipping from the Los Angeles Times and says:

Believe it or not, the people out this way agree with all that Kyle Palmer says, and would go him one better if they knew how to say it. Joe made a great record for himself on his trip to us. We appreciate the effort he made. You fellows are fortunate to have such a leader.

I agree, and, under the unanimous consent granted me, am pleased to include the following article from the Los Angeles Times of recent date:

[From the Los Angeles Times]

THE MEASURE OF AN AMERICAN

(By Kyle Palmer, Times political editor)

Not particularly encouraging or reassuring was the message JOE MARTIN brought from troubled Washington to the people of California.

But the message had courage in it—courage and faith—and determination and simple devotion to fundamental things.

For a full understanding of the message, of its value and sincerity, it is necessary to have an understanding of the man who brought it; necessary to weigh him in terms of integrity and power and competent leadership.

JOE MARTIN was born in a small town in Massachusetts. When he is not attending to official duties in the National Capital he lives with his mother in a house not 200 yards from the place in which he was born. During the greater part of his life he has lived in the physical and the spiritual shadow of Plymouth Rock.

DESPERATE DANGER

JOE MARTIN is a plain and simple man—loyal to his friends, to his principles, and to his country. By no means an ordinary man, he looks very much as an ordinary man looks, not being striking in manner, appearance, or speech. Without ostentation or fanfare or self-proclaiming, there is greatness in him.

JOE MARTIN is more—far more—than a smart politician; there are many smart politicians in the land. His shrewdness is Yankee shrewdness—it is not the mere surface artfulness of a professional student of politics.

REASON FOR CHOICE

Reasons why he was chosen as the chairman of the Republican National Committee—a post he did not seek and gladly would relinquish—are not obscure. MARTIN is sagacious, calm, trained in political organization and procedure, and is a tower of strength in the councils either of his party or of the Nation.

Experience has shown that his fund of common sense is inexhaustible; that his fidelity to party interests has never caused him to place those interests ahead of public interests; that his chief virtue as a public official is his basic virtue as a citizen.

JOE MARTIN is a good American—the unvarnished type that speaks a simple language and leads a simple life. He knows the value of a dollar; yes, and he knows the value of human independence and usefulness and service.

SIMPLE SERVICE

Through the frugal and self-reliant tenets of his own life JOE MARTIN approaches the larger and more complex problems and policies of government. He believes the Government should be strong, but not stronger than the will of the people that creates and maintains government in a democracy; he believes that the treasure of the Nation should be poured forth without stint to assure national welfare and national security, but that government should not waste the substance of the people; he believes that liberty is safeguarded best by laws and not by men.

Above all, as a plain man without pretension to greatness or to the persuasions of oratory and eloquence, JOE MARTIN believes that the Constitution and the Bill of Rights come nearer than any other documents or doctrines to a full realization of the basic rights and aspirations of humanity—of the fundamental responsibility of man for man.

JOE MARTIN believes there are men in government and men outside of government in the United States who would scrap the established democratic ideals and principles of the American people and substitute therefor a home-grown version of contemporary dictatorships.

He believes that this plan will succeed if the people do not fight it wholeheartedly, aggressively, and intelligently.

MANY QUALITIES

One of the best political horse traders in the Congress, one of the wiliest strategists political Washington has seen in many a day, one of the most skillful party leaders developed either by the Republicans or the Democrats in his generation, one of the strongest partisans in the hectic political battles of his State and of the Nation at large, JOE MARTIN is as steadfast and as unyielding in his fundamental Americanism as any of the founding fathers of the Republic.

Therefore, to study JOE MARTIN is to study more than a contemporary American; it is to study the soul and heart and bone and sinew of that Americanism from which an American is formed.

This is the man who came hurriedly from his busy duties and heavy responsibilities in Washington to speak to the Republicans and to all the people of California.

He came here primarily in his capacity as the party's national chairman, and he spoke directly to those interested in party matters.

SPEAKING TO ALL

In a larger sense JOE MARTIN spoke to all the people of all party affiliations and of all colors and creeds and races.

Without alarm or malice, but with deadly earnestness and with stern candor—appealing neither to passion nor to prejudice—JOE MARTIN, American, warns his fellow citizens that their institutions are in peril.

Not from the military conquerors in Europe and Asia, not even necessarily from sinister and treacherous foes outside the country, but from the machinations and schemes of Americans who have ceased to believe in the American system and the American way of life.

Loose talk, loose accusations, intemperate speech, intolerant views have to some extent blunted our sensibilities in this era of world disorder. We remain detached and unmoved as we hear or read of the slaughter of thousands, of the wretched sufferings of humanity beyond the seas, of the gradual advance of a mighty and ruthless force that sweeps ahead over the murdered bodies and the wrecked dreams of millions of men and women and children.

CONFIDENT OF WINNING

His admonitions are not to be confused with the clamor of either of the so-called isolationists or interventionists; he speaks neither pro nor con on questions that have divided our people into critical and carping factions; he merely urges the people to stand guard at the door of the citadel of their freedom.

Speaking not of other battles but of the Battle of America, JOE MARTIN says: "This is the battle to keep this Nation a republic and American in all its aspects."

JOE MARTIN says we will win that battle.

The Inner Enemies of the Republic

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, October 10, 1941

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. HOFFMAN. Mr. Speaker, from the Chicago Tribune of October 9 comes the following editorial:

[From the Chicago Tribune]

THE INNER ENEMIES OF THE REPUBLIC

Sir Arthur Salter, head of the British shipping mission, told William Fulton, Tribune correspondent in New York: "Well, we have been carrying on. We have lived and kept our factories working full time. We should say the situation is serious but not desperate." The figures on British shipping show that Great Britain now has control of 45 percent of the world's merchant marine. Before the war the Empire had 21,000,000 tons and since then the tonnage has been increased by the taking over of American ships and foreign ships to over 33,000,000 tons. The loss has been less than 8,000,000 tons.

British factories are operating, as Salter says, at full time. British imports are being maintained in all available markets, including the markets of the United States. Here our production for civilian use is wholly disorganized by the priority orders and by the expenditure of money and the use of ships to carry materials as free gifts into the war zones.

It is now proposed to take from our export business what few ships we have left and send them with munitions to Britain so there will be more than the present 45 percent of world shipping to take our trade away from us.

The small American businessman and the small American industrialist face extinction, although these elements are regarded as the bulwark of the American system of government and social order. The big corporations are falling into the grasp of the Federal Government, which proposes to reduce all American economy to seizable proportions and then seize it.

Who are the people who are leading this country into certain doom? They are found in the effeminate army of the Fight for Freedom Committee, who are hysterical and incapable of reason.

They are the job holders in Washington with delusions of grandeur, thinking that they are all American Hitlers.

They are the hired bureaucrats and salaried speakers, creators of vile characters in fiction, and writers of indecent plays. They are collectivists and Communists, who see more clearly than the majority of the American people that the American way of life is being destroyed and who expect to profit from it.

Unfortunately here in America today we come down to a classification of citizenship which our entire theory of government wanted to avoid. It was designed to avoid it. It was intended to allow every man to view his fellow as an equal and never compel him to view him as a superior. The American's hat was supposed to be on his head except when courtesy and the amenities required him to take it off. He never was compelled to hold it in his hand out of respect to the person he was addressing or who was addressing him.

If we are getting classes, it is against the intent of the primary American documents of government and freedom and in line with the wishes of the people who are about to destroy this Republic. Unfortunately, we are obliged to recognize that classes have arisen.

So, reluctantly we refer to the middle class, the great stratum of ordinary American citizens who have made this system of government work. They are supposed to be represented in Congress. Their politicians may not be scrupulously on the up and up, but in the past they were supposed to have had good common political sense and a fair perception of what the Nation's necessities were. They may have trimmed their own personal ambitions and their desires to profit, but in the past they have more or less represented the imperative requirements of the American Nation when it was in trouble.

Now the middle class, so-called, is threatened with extinction and with its extinction goes the life of the Republic. If the politicians in Congress have become Hitler Reichstag Members, we're probably sunk. If somebody set a fire on Capitol Hill and burned down the Halls of the two Chambers, we'd probably have a Nazi precedent for what seems to be happening here.
